**OBJECTIVE:** To introduce the fundamentals in Differential, Integral and Vector Calculus relevant to engineering applications.

**Unit I : Differential Calculus I**
Functions of one variable, Definitions of Limit, Continuity and Differentiation. Basic Theorems for each of these concepts, Successive Differentiation, Leibnitz Theorem, Taylor's Theorem with remainder, Rolle's Theorem, Mean Value Theorem and their applications. Critical points, Local Maxima & Minima, Increasing & Decreasing, Concavity, Points of inflection, Asymptotes of functions and their use in drawing neat sketch of its graph.

**Unit II: Differential Calculus II**
Functions of two or more variables, concept of Limit and Continuity, Partial Differentiation, Euler's theorem for Homogeneous functions, Chain rule, Total differential, Local Maxima, minima, Lagrange's Multiplier method, Taylor Series.

**Unit III: Integral Calculus**

**Unit IV Vector Calculus**

**LEARNING OUTCOME:** Familiarity with fundamental tools of Differential, Integral and Vector Calculus relevant to engineering applications

**Text Books:**

**Reference Books:**

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
OBJECTIVES

- The student will acquire a strong background in Applied Physics that will serve as a basis for engineering problem solving.
- The student will learn the basic concepts found in Oscillations and Waves, Optics, Quantum Mechanics, Nanotechnology and Lasers.
- The students will acquire problem-solving and analytical skills that will help in preparation for areas of engineering chosen.
- The students will learn how to demonstrate the application of the scientific methods though laboratory experiments thereby verifying the concepts related to theory content knowledge.
- The students will learn to demonstrate the ability to communicate scientific information effectively in written and oral formats.

UNIT I:

UNIT II:
Interference: Fringes with white light, Interference in plane parallel thin film (reflected and transmitted case), Wedge shape film (reflected case), Newton’s Rings and its application to determine wavelength of monochromatic light and refractive index of a liquid. Diffraction: Difference between Interference and Diffraction, Fraunhofer diffraction due to a single slit: resultant intensity, conditions of maxima and minima, angular and linear width of central maximum, N slit diffraction: resultant intensity, conditions of maxima and minima, missing orders, angular width of principal maxima. (10) L

UNIT III:
Polarization: Polarized and unpolarized light and its pictorial representation, plane of polarization and plane of vibration, Phenomenon of Double Refraction, positive and negative double refracting crystals, properties of ordinary and extra-ordinary rays, Nicol Prism and its applications as a polarizer and analyzer, Mathematical analysis of superposition of two linearly polarized light vectors, retardation plates-half and quarter wave plates, Production and detection of Plane, Circularly and Elliptically Polarized light. (8) L

UNIT IV:
Quantum Mechanics: Concept of wave packet, group and phase velocity, Heisenberg Uncertainty Principle and its applications viz. non-existence of electron in nucleus, radius and energy of Bohr’s first orbit, Schrödinger time independent and time dependent wave equation, Physical interpretation of wave function, normalization condition of the wave function, Application of Schrodinger wave equation: Particle in a one dimensional box (eigen function and eigen values) and rectangular potential barrier. (8) L
Course Structure & Syllabus of B.Tech – Electrical Engineering
Applicable for Batch: 2017-2021

UNIT V:

Nanotechnology: Introduction to Nanomaterial, Classification of nanomaterials, application of nanotechnology. Lasers: Spontaneous and Stimulated emission, Stimulated Absorption, Einstein’s A & B Coefficient, metastable states, population inversion, basic principle of laser (three level and four level), optical cavity and resonator, He-Ne laser. (8 L)

List of Experiments

1. To determine the wavelength of monochromatic light by Newton’s Ring.
2. To determine the specific rotation of cane sugar solution using bi-quartz polarimeter.
3. To determine the wavelength of spectral lines using plane transmission grating.
4. To study the variation of magnetic field along the axis of a current carrying coil and then to estimate the radius of coil.
5. To Study the nature of polarization of Laser light and verify Malus Law
6. To Measure the acceleration due to gravity 'Value of g' using bar pendulum
7. To measure the frequency of ac mains using sonometer.
8. To measure the numerical aperture (NA) of an optical fibre.
10. To study the characteristics of a Photovoltaic cell.

LEARNING OUTCOMES:

• Demonstrate a detailed knowledge of Oscillations, Optics, Quantum Mechanics, Lasers and Nanotechnology.

• Discuss how laws of Physics can be applied in the understanding and development of engineering systems.

• An ability to communicate scientific information effectively in written and oral formats.

• Skills to perform experiments in the physics laboratory with ability to work independently and an ability to analyze and interpret data in the physics laboratory.

Text Books:

• Ajoy Ghatak; Optics; Tata Mc-Graw Hill Education, 2009.

Reference Books:

• Jenkins and White; Fundamentals of Optics; Fourth; McGraw-Hill, 2000
• Young and Freedman; Sears and Zemansky’s University Physics, Tenth; Addison-Wesley, 2000.

OBJECTIVES

- To promote efficiency in English Language with the development of the four skills of communication i.e., LSRW (Listening, Speaking, Reading & Writing).
- To help students perform better in all academic subjects through greater command over the English language.
- To develop technical writing skills with a focus on critical thinking, rhetorical analysis, effective writing & effective document design.

Unit-I
Communication
Communication: Meaning, Types of Communication: General & Technical Communication
Barriers to Communication, Overcoming strategies.

Unit II
Non Verbal Communication
Knowledge and adoption of Non Verbal cues of communication: Kinesics, Proxemics, Chronemics, Oculesics, Haptics, Paralinguistics

Unit III
Listening & Speaking Skills
Listening Comprehension: identifying General & Specific information, Note taking and drawing inferences
Introduction to Phonetics: Articulation of consonants and vowel sounds.
Public Speaking
Discussion Techniques

Unit IV
Reading Skills
Reading Strategies and Vocabulary Building
Reading Comprehension

Unit V
Technical Writing Skills
Paragraph development
Technical Articles, Research Articles, Plagiarism
Intra office Correspondence: Notice, Agenda, Minutes and Memorandum,
Technical Proposal & Report

LEARNING OUTCOMES

- Build confidents of the students through practice of the basic skills of the basic skills of communication.
- The students will be equipped to comprehend a variety of content & develop deeper insight.
- Enable the students to effectively create standard formats used to construct meaningful documents.

**OBJECTIVES**
The objective of the course is to make the students to understand the key hardware components in a modern computer system and as to how the software is mapped to the hardware. The student shall also be able to learn make the computer programs using C language by exploring the various features of C.

**Unit-1**  
Basics of Computer: Introduction to digital computer, basic operations of computer, functional components of computer, Classification of computers.  
Introduction to operating system: [DOS, Windows, Linux and Android] purpose, function, services & types.  
Number System: Binary, octal and hexadecimal number systems, their mutual conversions, Binary arithmetic.  
Basics of programming: Approaches to Problem Solving, Concept of algorithm and flow charts, Types of computer languages:- Machine Language, Assembly Language and High Level Language, Concept of Assembler, Compiler, Loader and Linker.

**Unit-2**  
Standard I/O in C, Fundamental data types- Character type, integer, short, long, unsigned, single and double floating point, Storage classes- automatic, register, static and external, Operators and expression using numeric and relational operators, mixed operands, type conversion, logical operators, bit operations, assignment operator, operator precedence and associativity.  
Fundamentals of C programming: Structure of C program, writing and executing the first C program, components of C language. Standard I/O

**Unit-3**  
Conditional program execution: Applying if and switch statements, nesting if and else, use of break and default with switch, program loops and iterations: use of while, do while and for loops, multiple loop variables, use of break, continue and goto statements.  
Functions: Introduction, types of functions, functions with array, passing values to functions, recursive functions.

**Unit-4**  
Arrays: Array notation and representation, manipulating array elements using one and two dimensional arrays, linear searching, sorting (bubble sort), strings, matrix manipulation (transpose, addition, multiplication).  
Structures: Purpose and uses of structures, declaring structures, array of structures, union, enumerated data types

**Unit-5**  
Pointers: Pointers: pointer variables, pointer operator, pointer expression, array of pointers, multiple indirection, pointers to functions, dynamic memory allocation functions.  
File handling, standard C preprocessors, defining and calling macros, conditional compilation.

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
LEARNING OUTCOMES
At the end of the course the students shall be able to:

➢ The basics of computer components & computer software.
➢ The basic terminology used in computer programming.
➢ To write, compile and debug programs in C language.
➢ Use different data types in a computer program.
➢ To design programs involving decision structures, loops and functions.
➢ To explain the difference between call by value and call by reference
➢ The dynamics of memory by the use of pointer.
➢ To use & understanding of file handling

Course Objective:
To identify hand tools and instruments for machining and other workshop practices. To obtain basic skills in the trades of fitting, carpentry, welding, sheet metal and machining. Introduction to Foundry, Forging shop, Gas & Spot Welding Acquire measuring skills, using standard workshop instruments & tools.

List of Experiments
1. **Carpentry**: To make a wooden joint with soft wood as per the drawing provided in the manual. (One of the following jobs)
   - Jobs: T-Lap joint, Dove tail joint, Mortise & Tendon joint, bridle joint. (4 Hrs)
2. **Arc Welding**: To make a welding joint with mild steel flat using Manual Metal Arc Welding Machine according to the drawing provided in the manual. (One of the following jobs)
   - Jobs: Lap joint, Butt joint, Fillet/Corner joint. (4 Hrs)
3. **Fitting**: To make a joint using fitting tools with mild steel flats, round bars or square bars as per the drawing provided in the manual. (One of the following jobs)
   - Jobs: Plug and socket joint with MS Plate, Square key with MS bar, External threads on GI pipes, Internal threading on MS flats. (4 Hrs)
4. **Machining**: To make a machine-component using lathe with mild steel round bar or hexagonal bar comprising common turning operations with reference to the drawing given in the manual. (One of the following jobs)
   - Jobs: Hex Bolt, Axle for cycle wheel, Jig Bush, a typical turning specimen. (4 Hrs)
5. **Sheet metal**: To make a sheet metal component with galvanized iron sheet as per the drawing provided in the manual having spot welded joint. (One of the following jobs)
   - Jobs: Square tray, Scoop, Funnel. (4 Hrs)
6. **Foundry & Forging shop**: To observe the demonstration of making a square key using hand forging tools & study the concept and application of Foundry. (2 Hrs)
7. **Gas & Spot Welding**: To observe the demonstration of making a Lap joint/Butt joint with mild steel sheet using Oxyacetylene flame as per the drawing provided in the manual & to perform the spot welding operation on G.I. sheet. (2 Hrs)
8. **Minor Project**: To make a minor project by the students in batches. (2 Hrs)

Learning Outcomes:
- Capability to identify hand tools and instruments for machining and other workshop practices.
- Obtain basic skills in the trades of fitting, carpentry, welding and machining.
- Acquire measuring skills, using standard workshop instruments & tools.
- Gain eye hand coordination, enhance psycho motor skills and attitude.

**OBJECTIVES**

- To acknowledge students about charge, current, voltage and various circuit laws involved in analysis.
- To get acquaints students with the basic idea of Generation, Transmission and Distribution of Electrical energy.
- To provide students with the basic knowledge of operation and working different types of electrical machines and their application
- To provides knowledge regarding use of multiphase system and their possible interconnections with different loads.

To get acquaints student with fundamental knowledge of semiconductor devices their characteristics and modelling in different applications.

**UNIT I – DC NETWORK THEOREM**
Review of basic circuit theory concepts, Mesh and Nodal analysis, Superposition theorem, Thevenin’s theorem, Norton’s theorem, Maximum power transfer theorem, Star – Delta transformation

**UNIT II – AC CIRCUIT’S FUNDAMENTAL AND TRANSFORMERS**
Single Phase AC: Phasor representation of voltage and current, AC circuit behaviour of Resistive, Inductive and Capacitive Load and their combination in series and parallel, Power triangle, Power factor
Three Phase AC: Delta and Star connections, Relation between Line and Phase values, three phase power and its measurement
Transformers: Principle of power Generation (single line diagram), Principle of Operation, Types of construction

**UNIT III – ELECTRICAL MACHINES**
DC Machines: Construction, working principle & characteristics
Three Phase Induction Machines: Principle of operation of 3 φ Induction Motor, Types of Induction Motor, need for starter in 3 φ IM, Slip- Torque characteristics.
Single Phase Induction Motor: Principle of operation of 1 φ IM, Methods of starting of 1 φ IM
Synchronous Machines: Construction and Principle of operation of Alternator and Synchronous Motor

**UNIT IV: FUNDAMENTAL OF SEMICONDUCTOR:**
Energy bands in semiconductors, intrinsic and extrinsic semiconductors, Fermi level.
Diode circuits: Construction, Junction diode characteristics, Half and full wave rectifiers - Expression for efficiency and ripple factor , Filter circuits. Zener Diode Characteristics and its application as voltage regulator in Regulated power supply.

**UNIT V: TRANSISTOR FUNDAMENTAL:**
Transistor circuits: Construction and characteristics of a transistor in CB, CE and CC modes - Relative merits. Load Line and operating point concept (both AC and DC). Biasing of Transistors and stability analysis. Construction and characteristics of JFET and MOSFET.
Communication Systems, Communication Channels, Need of modulation, Types of modulations (Wave shapes and final expression only),

**Text Books**
Course Structure & Syllabus of B.Tech – Electrical Engineering
Applicable for Batch: 2017-2021

Electrical and Electronics Lab:
1. Verification of Network Theorems.
3. Determination of parameters and losses in a single phase transformer by OC and SC test.
4. Perform the polarity test on Transformer.
5. Study of characteristic of AC Motor.
6. Study of DC shunt and series generator characteristics.
7. Study the Speed control of dc shunt motor.
8. Study running and reversing of a three phase induction motor.
9. To identify and Study of the various component and Devices of electronics with their specification (CRO, Function Generator, Multimeter, Power Supply, resistor, capacitor, inductor, ICs, LED, potentiometer etc.)
10. To study the V-I characteristics of PN diode and Zener diode.
11. To find the efficiency of rectifiers and ripple factor of capacitive and non-capacitive half wave and full wave rectifier.
12. To Study and verify clipper and clamper with biased circuits.
13. To find the characteristics of CB and CE amplifiers.
14. Determine the characteristics of FET.
15. To find out the power energy of various periodic and non-periodic signals.

Learning Outcomes
1. Acknowledge students about charge, current, voltage and various basic electric circuit laws.
2. Acquaint students about DC circuit analysis and methods.
3. Advanced approach for solving series parallel network of resistors by star delta transformation.
4. Basics of AC circuits elements and various methods involved. Understanding the concepts of rms, average and peak values of AC waveforms and their power factor.
5. Acquaint students about the three phase loads, star delta connections and power. Relation between there phase and line values.
6. Acknowledge students with the use of transformers and its working.
7. To build an ability amongst students regarding the functioning of DC machines and its characteristics.
8. To recognise the need for synchronous machine in our electrical systems, its basic functioning and various advantages over other types of machines.
9. Provide students’ knowledge regarding construction and working of three phase and single phase induction motors their application in various practical applications.
10. Provides information regarding the fundamental theory of semiconductor devices, fermi level and concept of doping.
11. Acquaints students with the knowledge of different types diode circuit configuration.
12. Provide students with the capability of analysing the different types of waveforms and to calculate various associated parameters.
14. Basics of communication system, modulation and their types

OBJECTIVES
- To get Acquaints students with the basic idea of measurement system, its classification and characteristics.
- To acknowledge students about different types of measuring instruments based on the fundamental principle.
- To provide students with knowledge of methods of measuring resistances, inductance and capacitance.
- Provides knowledge regarding the basics of digital Measurement

Philosophy of Measurement:
Methods of Measurement, Measurement System, Classification of instrument system, Characteristics of instruments & measurement system, Errors in measurement & its analysis, Standards.

Analog Measurement of Electrical Quantities:
Permanent Magnet Moving Coil, Moving Iron type of Ammeters & Voltmeters, Electrodynamic Wattmeter,

Measurement of Parameters: Different methods of measuring low, medium and high Resistances, measurement of Inductance & Capacitance with the help of AC Bridges.

Digital Measurement:
Concept of digital measurement, Block diagram.

LEARNING OUTCOMES
1. Acknowledge students with the methods of measurement, classification of instruments system.  
2. Acquaint students about characteristics of instruments and their operation.  
3. Provides knowledge about basics of error measurement and methods of reducing it.  
4. Basics of different types of measuring instruments based on the fundamental theory of operation.  
5. Acknowledge students with the methods of measuring low, medium and high resistance.  
6. Acknowledge students with the methods of measuring inductance and capacitance using different bridge configuration.  
7. Provides knowledge regarding the fundamental of digital measurement, techniques and its application.

Text Book:

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Electrical and Electronics Measurement (Labs)

1. Calibration of ac voltmeter and ac ammeter.
2. Measurement of form factor of a rectified sine wave and determine source of error if r.m.s. value is measured by a multi-meter.
3. Measurement of phase difference and frequency of a sinusoidal ac voltage using C.R.O.
4. Measurement of power and power factor of a single phase inductive load and to study the effect of capacitance connected across the load on the power factor.
5. Measurement of low resistance by Kelvin’s double bridge.
7. Measurement of inductance by Maxwell’s bridge.
10. Measurement of capacitance by Owen’s bridge.
11. Measurement of capacitance by De Sauty Bridge.
OBJECTIVE: To introduce the fundamentals in Matrices and Linear Algebra, Ordinary Differential Equations, Infinite Series, Laplace Transform and Fourier Series relevant to engineering applications.

UNIT I: Linear Algebra
Matrices, Elementary row and column operations, row reduced echelon form, rank of a matrix, invertible matrices. Consistency and solution of a system of linear equations. Properties of \( \mathbb{R}^n \) as a vector space, Linear Dependence and Independence of elements in \( \mathbb{R}^n \), Basis of a Vector Space, Vector Space of polynomials over \( \mathbb{R} \) and its basis, Matrix transformation, Rank-Nullity Theorem, Similar Matrices, Eigen-values and Eigen-vectors, Cayley–Hamilton theorem and its applications. Diagonalization of Matrices.

UNIT II: Differential Equations
Methods of solving differential equations of first order and first degree, Bernoulli equation, Solutions of linear differential Equations of second and higher orders with constant & variable coefficients, Euler-Cauchy linear differential equation, method of variation of parameters. Solution of simultaneous linear differential equations.

UNIT III: Infinite Series
Introduction; Sequences; Series; Convergence; Series of positive terms; Comparison test; Integral test; D’Alembert’s Ratio test; Cauchy’s root test; Alternating series; Leibnitz rule.

UNIT IV: Fourier Series
Periodic functions; Fourier series of Periodic functions; Euler’s formulae; Functions having arbitrary period; Change of intervals; Even and Odd functions; Half range sine and cosine series.

UNIT V: Laplace Transform
Laplace Transform; Existence theorem; Properties of Laplace Transform ; Laplace Transform of derivatives and integrals; Laplace Transform of Periodic functions; Unit Step function and Error Function; Dirac- Delta function. Inverse Laplace Transform and their properties, Convolution theorem; Applications of Laplace Transform to solve linear and simultaneous differential equations pertaining to engineering problems.

Outcome: Familiarity with fundamental tools of Matrices and Linear Algebra, Ordinary Differential Equations, Infinite Series, Laplace Transforms and Fourier Series relevant to engineering applications

OBJECTIVES

- To introduce to students to the business & corporate environment and its expectations.
- To help students to identify and sharpen their personal and professional skills.
- To ensure employability of students through a perfect blend of hard & soft skills.

Unit I - Business Communication 10 hrs

Importance & Features of Business Communication, Flow of Communication: Channels & Networks
Communication: E-mails & E-Tools
Business Presentation
Business Etiquette, Telephonic Etiquette
Business Letter Writing
Job Application Letter & Resume
Interview Skills, Impression Management:

Unit II - Personal Skills for Corporate Communication 10 hrs

SWOT Analysis: Self-Assessment, Identifying Strength & Weakness
Self-Awareness, Self-Disclosure & Self-Management (Stress, Anger)
Goal Setting: Personal & Professional Goals, SMART-ER Goals
Human Perception: Understanding People, Perceptions, Attitudes
Personality (Personality Test)

Unit III - Professional Skills for Corporate Communication 10 hrs

Decision Making: Techniques, Six Thinking Hats
Creative Thinking, Lateral Thinking
Team Building & Leadership Skills
Time Management: Planning Organizing, Time Wasters
Conflict Resolution Skills
Negotiation Skills

LEARNING OUTCOMES

- Students identify their goals and through enhanced soft skills work towards achieving them.
- Greater self-confidence and knowledge of life skills helps them to develop healthier interpersonal relationships.
- Prepares the students to face future challenges and excel in their personal and professional lives.

3-0-2 | 4.0    | UC               |     | 1\textsuperscript{st} | I/II       |           |     |

OBJECTIVE

To introduce object oriented programming concepts and implement them in C++.

Unit -1

Introduction to Object Oriented Programming, including methodologies, programming techniques, Object Oriented languages.
Overview of C++ basic structures, including the main () function, C++ data types, different type of operators expressions and statements, standard Input/output, Simple flow of control, Defining user defined Functions.

Unit -2

General overview of objects and classes, Object and classes in C++, including class definition, Defining members inside or outside, accessing of members, constructors, types of constructors, destructors and Pointer to class object.

Unit-3

Polymorphism: function overloading, methods of overloading, constructor overloading, Operator overloading.
General overview of inheritance: Introduction, Categories of inheritance, public/protected/private inheritance, constructors and destructors in derived classes, and Virtual Base class.

Unit-4

Function overriding and virtual functions, Abstract class and abstract base class, Friend functions, Templates in C++, function templates, class templates, templates and inheritances, templates and static members.

Unit-5

File handing in C++: opening of file, closing of file, text files, binary files, Reading and writing into a file. Exception Handling in C++, including usage, try, throw and catch.

LEARNING OUTCOMES

At the end of the course the students shall be able to:
- Differentiate between procedure oriented programming and object oriented programming.
- Understand the three key features of the object-oriented programming language: encapsulation (abstraction), inheritance, and polymorphism.
- Know the benefits of object oriented programming.
- Identify the differences between private, public and protected members of a class.
- Declare and use static data members and static methods.
- Design and use friend functions and friend classes.
- Use constructor and destructor functions to initialize and destroy class objects.
- Use inheritance to build class hierarchies.
- Overload operators to work with user-defined classes.
- Implement programs for file Handling.
- Identify benefits of using virtual functions.

Reference Books-
1. Schildt Herbert, C++ Programming, 2\textsuperscript{nd} edition, Wiley

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Course Objective:
The objective of this course is to make students to learn basic engineering mechanics concepts and will help in solving problems involving forces, loads and moments and to know their applications in allied subjects. The course will develop engineering aptitude in field of application of science and technology.

Unit 1: Introduction to Engineering Mechanics
Introduction: Idealization of bodies, physical quantities- units and dimensions, Scalars and vectors, Laws of mechanics, system of forces and its classification, Principle of superposition, transmissibility of forces. (2 Hrs)

Resultant of concurrent force system
Parallelogram Law of forces, Resolution of forces, Principle of resolved parts; Numerical problems on composition of coplanar concurrent force systems. (2 Hrs)

Resultant of non-concurrent force system :
Moment of a force, Couple, Equivalent force - couple system, Numerical problems on resultant of non-concurrent force system. (3 Hrs)

Unit 2: Equilibrium and Friction
Equilibrium of system of forces - Definition of Equilibrant; Free body diagram, Equilibrium of two and three force system, Conditions of static equilibrium, Lami's theorem. (3 Hrs)

Application- Static Friction in rigid bodies in contact
Types of friction, Laws of static friction, Limiting friction, Angle of friction, angle of repose; Impending motion on horizontal and inclined planes; Numerical Problems on single and two blocks on inclined planes, ladder and wedge friction. (4 Hrs)

Unit 3: Analysis of Plane truss and Beam
Support Reaction in beams: Types of beams, Types of Loads and Supports, statically determinate beams, Numerical problems on support reactions for statically determinate beams with Point load (Normal and inclined) and uniformly distributed and uniformly varying loads and Moments. (3 Hrs)

Plane Truss: Perfect and imperfect truss Assumptions and Analysis of Plane Truss by Method of joints and Method of section. (4 Hrs)

Unit 4: Centroids and Moments of Inertia of Engineering Sections
Centroids: Introduction to the concept, Centroids of line and area, Centroids of basic geometrical figures, computing Centroids for regular and composite cross-sections. (4 Hrs)

Moment of Inertia : Introduction to the concept, Radius of gyration, Parallel axis theorem, Perpendicular axis theorem, Moment of Inertia of basic planar figures, computing moment of Inertia for regular and composite cross-sections. (4 Hrs)
Unit 5: Kinematics and kinematics

Kinematics of particles: Motion related to Cartesian and polar coordinates, motion curves, relative motion and dependent motion. Projectile motion, tangential and normal components of acceleration. (4 Hrs)

Kinetics of particles: Newton’s second law of Motion; Energy principles; Impulse momentum principle; direct central impact. (3 Hrs)

LEARNING OUTCOMES
1. Identify principles of mechanics used in real life engineering problems.
2. Know basics of Engineering based on force application, and selection of materials in application.
3. Understand the action of Forces, Moments and other loads on systems of rigid bodies;
4. Compute the reactive forces and the effects that develop as a result of the external loads;
5. Locate the Centroids and compute the Moment of Inertia of regular cross-sections.
6. Express the relationship between the motions of bodies
7. Equipped to pursue studies in allied courses in Mechanics.

Course Objective:
To educate students on different measurement systems and to share application of principle of metrology and measurements as applied in industries. To learn laboratory skills, conduct experiments and identify sources of variability.

Measurement-Basics:
Unit & Dimension, Traceability, Calibration, Least count, Error, Accuracy, Precision, Uncertainty, Repeatability, Reproducibility and Steadiness.

Measurement - Solids:
Inside / Outside Diameter, Height / Depth, Eccentricity / Run-out, Taper, Backlash (play), Thermal conductivity

Measurement - Material Properties:
Metals, Non-metals & Polymers, Measurement of mechanical properties as Tensile strength, Impact Strength and Hardness, Mass Moment of Inertia of rigid body and Poission’s Ratio.

Measurement - Fluids:
Density, Specific Gravity, Specific volume, Surface Tension & Viscosity Measurement, open channel discharge & velocity measurement, Heat Engine and Heat exchanger.

List of Experiments
1. Error Analysis and Graph drawing and Evaluation.
2. Measurement of inside & outside diameter, taper, run-out etc.
4. Tensile test.
5. Impact test.
6. Hardness test.
9. Surface tension & viscosity measurement.
10. Open channel simple techniques flow measurement.
11. Others

Learning Outcomes
- Demonstrate excellent laboratory skills, conduct experiments and identify sources of variability
- Analyse, interpret, and present measurement data from measurements/experiments
- Enhance ability to apply knowledge of mathematics, statics, physics and engineering sciences
- Gain eye hand coordination, enhance psycho motor skills and attitude.

Approved by the Academic Council at its 6th Meeting held on 13.05.2017

Applicable for Batch: 2017-2021

Text Books

Lab Manual
1. DIT Engineering Measurements Lab Manual, ME Department Aug 2017

Reference Books:
1. SP Venkateshan IIT Madras, Mechanical Measurements 2nd Edition; e-Book,
2. NPLaboratory, Beginners guide to measurements in Mech Engineering, UK; e-Book

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Course Objective:
To improve the visualization skills and to develop an understanding of the theory of projection. To enable the students with various concepts like dimensioning, conventions and standards related to working drawings in order to become professionally efficient.

Contents:
1. **Introduction**: Importance of graphics in engineering applications, Sheet Layout, Size of Sheets, Title blocks, Type of lines, Lettering, Dimensioning, Scale (Full, Reduced, Large)
2. **Projection**: Methods of Projection, Planes of Projection, Projection of points, Projection of straight lines, Projection of planes.
3. **Projection**: Projection of solids.
4. **Orthographic views**: Machine parts with dimensioning.
5. **Freehand sketching**: Isometric Projections; Introduction and basics.
6. **AutoCAD**: Introduction to Commands, Explaining need of AutoCAD over Manual drafting.

Mode: The contents of the subject needs to be delivered in the form of basic teaching process in one hour of the three hours practice session, such that the student is able to understand the basic principles before initiating drawings.

Exam: Engg Graphics will have both Mid Term and End Term Practical Exams

Learning Outcomes:
- To enable students to acquire and use engineering drawing skills as a means of accurately and clearly communicating ideas, information and instructions.
- To enable students to acquire requisite knowledge, techniques and attitude required for advanced study of engineering drawing.
- Understand AutoCAD commands and appreciate the need of AutoCAD over Manual Drafting.

Text Books:

Reference Books:

List of Experiments/ Drawing sheets (L+P)
1. One sheet on Lettering and Geometric construction. (1+4 Hrs)
2. One sheet on Basics of Projection of points and lines. (2+4 Hrs)
3. One sheet on Projection of Planes. (2+4 Hrs)
4. One sheet on Projection of Solids. (2+4 Hrs)
5. One sheet on Orthographic views of simple isometric blocks. (1+4 Hrs)
6. One sheet on Free hand sketches and Basic Isometric Projections. (0+4 Hrs)
7. Basic AutoCAD commands. (1 +3Hrs)

**OBJECTIVE:** To provide a summary on water chemistry, water treatment, green chemistry and synthetic chemistry. The course intends to provide an overview of the working principles, mechanism of reactions and application of the building blocks like batteries, fuel cells, polymers and an overview of surface coatings in order to protect the metal. This course relies on elementary knowledge of polymers, engineering materials and basics of nanotechnology to illustrate the concepts involved. To provide an impression of organic chemistry, spectroscopy, biomolecules, fuels and lubricants. To gain the knowledge on existing & future upcoming devices, materials and methodology.

**Unit 1. Water Treatment and Analysis**

(08 Lectures)

**Unit 2. Electrochemistry & Corrosion**

(06 Lectures)

Migration of ions, Transference number, Determination of Transference number by Hittorf’s method, Conductometric titrations, Types of electrode: Calomel and glass electrode, Liquid junction potential, Potentiometric Titrations, Corrosion and its economical aspects, Types of corrosion: Galvanic, Erosion, Crevice, Pitting, Waterline, Soil, Microbiological. Theories of corrosion: Acid, Direct Chemical attack, Electrochemical. Corrosion prevention by metallic, organic/inorganic coatings and corrosion inhibitors.

**Unit 3. Polymers & Biomolecules**

(10 Lectures)

Introduction; Classification of Polymers; Functionality; Mechanism of Polymerization; Plastics; Individual Polymers; LDPE, HDPE, PVC, Polystyrene, Bakelite, Teflon, PMMA, PET, Nylon-6, Rubbers (BUNA-S and BUNA-N); Speciality Polymers (Conducting Polymers, Silicones and Polycarbonates), Gypsum, Plaster of Paris, Insulating Materials. Structural and functional attributes of cell and cell organelles; Biomolecules (Proteins, Carbohydrates, Lipids, Enzymes, Nucleic acids). r-DNA technology and its applications in industry, health, environment and agriculture. Microbial technology and its common applications.

**Unit 4. Fuels, Battery& Lubrication**

(08 Lectures)

Classification of fuels, Calorific value, Cetane number, Octane number, fuel quality, Comparison of solid, liquid and gaseous fuel, properties of fuel, alternative fuels: Biofuels, Power alcohol and synthetic petrol, Battery, Photovoltaic cell, Metal-air battery, Lithium and nickel battery. Introduction of Lubricants, Functions of Lubricants, Classification of lubricants, Mechanisms of Lubrication, Properties of Lubricants.

**Unit 5. Green Chemistry & Nano Chemistry**

(08 Lectures)

Emergence of green chemistry, Twelve principle of green chemistry, use of alternative feedstock (biofuels), Use of innocuous reagents, use of alternative solvents, design of safer chemicals, designing alternative reaction methodology, minimizing energy consumption. Introduction to Nano chemistry, properties of Nanomaterials, preparation of nanomaterial, self-assembly, Nanomaterials, Applications of Nanomaterials.

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
LIST OF PRACTICALS
1. Determination of alkalinity in the given water sample.
2. Estimation of temporary and permanent hardness in water sample using EDTA as standard solution.
3. Calculation of percentage of available chlorine in bleaching powder.
4. Chloride content in the given water sample by Mohr’s method.
5. Determination of iron content in the given ore by using external indicator
6. pH-metric titration.
7. Proximate Analysis of coal sample
8. Condutometric titration.
9. Synthesis of Phenol formaldehyde resin
10. Viscosity of a lubricant by Redwood Viscometer
11. Flash and Fire point determination of a Lubricant
12. Calorific value of a fuel sample by Bomb calorimeter.
13. Determination of order of reaction in ester hydrolysis reaction
14. To determine the DO in a given water sample
15. To study the adsorption of acetic acid on activated charcoal

LEARNING OUTCOME: Ability to know and to understand the various process of removing the hardness of water and principles of green chemistry. Understand the operating principles and the reaction mechanisms of batteries and fuel cells. Students will be able to apply this knowledge to the analysis and design of batteries. Hydrogen fuel cell technology is used in automobiles in order to reduce environmental pollution. Electrochemistry concept is used to know the Corrosion treatment process of alloys. An ability to identify and formulate polymers and have a knowledge of various polymers like polyethene, PVC, PS, Teflon, Bakelite, Nylon which have engineering applications. To gain acquaintance regarding biomolecules and their application in engineering. An ability to handle various instruments like spectroscope, flame photometer etc. Have a knowledge of synthesizing Nano materials and their applications in industry. Know the properties of Fuels and Lubricants. Have a scope in the area of Material Chemistry.

**OBJECTIVE**

To impart basic knowledge about the environment and its allied problems and to develop an attitude of concern for the environment. Further the course structure will create the awareness about environmental problems among students and motivate the students to participate in environment protection and environment improvement programs. The course aims to develop skills to help the concerned individuals in identifying and solving environmental problems.

**Unit 1: Basics of Environment and Natural Resources:**

**Unit 2: Ecosystems:**

**Unit 3: Biodiversity and its conservation:**

**Unit-4 Environmental Pollutions:**

**Unit-5 Social Issues and Environment:**

**Field work:**

- Visit to a local area to document environmental asset: river/forest/grassland/hill/mountain
- Visit to a local polluted site-Urban/Rural/Industrial/Agricultural
- Study of common flora and fauna.
- Study of a common ecosystem-pond, river, hill slopes, etc.

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Course Structure & Syllabus of B.Tech – Electrical Engineering
Applicable for Batch: 2017-2021

Course Outcome:
At the end of the course, the student will be able to:
CO1. Demonstrate depleting nature of Environmental Resources and Ecosystem concepts.
CO2. Able to identify the structure and functioning of natural ecosystems.
CO4. Adapt to 3R (Reuse, Recovery, Recycle). Identify the causes and control measures related to Pollutions.
CO 5. Illustrate and analyse various Case Studies related to Environmental issues and Env. Legislation.

OBJECTIVE
To familiarize the students with the features of the Indian Constitution
To provide a knowledge of their constitutional rights

Unit 1 Introduction 5 Hrs
Constitution- meaning of the term, basic features Indian Constitution: Sources and constitutional history.
Features: Citizenship, Preamble, Fundamental Rights and Duties, Directive, Principles of State Policy, debates on Fundamental Rights and Directive. 1 Hr
Features: Citizenship, Preamble, Fundamental Rights and Duties, Directive, Principles of State Policy, debates on Fundamental Rights and Directive. 4 Hrs

Unit 2 Union Government and its Administration 6 Hrs
Structure of the Indian Union: Federalism, Centre- State relationship, 2 Hrs
President: Role, power and position, PM and Council of ministers, Cabinet and Central Secretariat, Lok Sabha, Rajya Sabha 2 Hrs
Institutional Functioning: Prime Minister, Parliament and Judiciary, Power Structure in India: Caste, class and patriarchy 2 Hrs

Unit 3 State Government and its Administration 3 Hrs
Governor: Role and Position, CM and Council of ministers, State Secretariat: Organisation, Structure and Functions 3 Hrs

Unit 4 Local Administration 7 Hrs
District’s Administration head: Role and Importance, Municipalities: Introduction, Mayor and role of Elected, Representative, CEO of Municipal Corporation. 3 Hrs
Pachayati Raj: Introduction, PRI: Zila Pachayat, Elected officials and their roles, CEO Zila Pachayat: Position and role, Block level: Organizational Hierarchy (Different departments), Village level: Role of Elected and Appointed officials, Importance of grass root democracy 4 Hrs

Unit V: Election Commission 5 Hrs
Election Commission: Role and Functioning, Chief Election Commissioner and Election Commissioners, State Election Commission: Role and Functioning, Institute and Bodies for the welfare of SC/ST/OBC and women.

COURSE OUTCOME:
CO 1 Enable the students to protect their rights
CO 2 The students will be engaged in the political system of India

TEXT BOOKS

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Course Structure & Syllabus of B.Tech – Electrical Engineering
Applicable for Batch: 2017-2021

REFERENCE BOOKS

Objective:

- Introduce the fundamentals in Complex variable.
- Solving Partial Differential Equations.
- Legendre polynomial of first kind with properties.
- Bessel function of first kind and its properties.

UNIT I: Complex variable- I

Elementary functions, limit, continuity & differentiability, Analytic Functions; Cauchy – Riemann equations, Harmonic functions, Line integral in the complex plane, Cauchy’s Integral theorem, Cauchy’s Integral formula for derivatives of analytic function.

UNIT II: Complex Variables -II

Power series, Taylor’s series, Laurent’s series, Poles, Zeros, Singularities, Residue Theorem, Evaluation of real integrals of the type $\int_{0}^{2\pi} f(\cos \theta, \sin \theta) d\theta$ and $\int_{-\infty}^{\infty} f(x) dx$.

UNIT III: Special Functions

Series solution of ODE of 2nd order with variable coefficient with special emphasis to Legendre and Bessel differential equation by Frobenious method, Legendre polynomial of first kind, Bessel function of first kind and their properties.

UNIT IV: Fourier Transform & Z-transform

Fourier integral, Fourier transform, Fourier sine and cosine transforms, Linearity, Scaling, frequency shifting and time shifting properties, Convolution theorem and its application.

UNIT V: Partial differential equations and its Applications

Introduction to partial differential equations; Linear partial differential equations with constant coefficients of second order and their classification; Method of Separation of Variables for solving Partial Differential Equations, One-Dimensional Wave Equation, One Dimensional heat equation.

Course Outcomes:

- Familiarity with methods of solving partial differential equations.
- Learn differentiation and Integration of complex functions.
- Solving real integrals with complex integration.
- Learn Fourier and Z-transform rules with applications.

Subject Code | Subject Title | LTP | Credit | Subject Category | Year | Semester | 
---|---|---|---|---|---|---| 
EE201 | BASIC NETWORK ANALYSIS | 3 1 2 | 5 | DC | 2nd | 3rd | 

Objectives of the Course
- This course aims to provide basic understanding of the different types of continuous time signals and systems and their mathematical representation.
- The students will get understanding of different network theorems with their application to ac networks.
- The course will provide knowledge of transforming the continuous time domain signal into frequency domain signal by the application of Laplace transform, Fourier transform and Z transform.

Unit 1 INTRODUCTION TO CONTINUOUS TIME SIGNALS AND SYSTEMS: 
Basic continuous time signals, unit step, unit ramp, unit impulse and periodic signals with their mathematical representation and characteristics. Waveform synthesis. Introduction to various types of systems, Causal and Non-causal, Stable and Unstable, Linear and Non-linear, Time invariant and Time varying systems.

ANALOGOUS SYSTEM: Mechanical elements for translational and rotational systems, force-voltage and force-current analogy, torque-voltage and torque-current analogy.

Unit 2 NETWORK THEOREMS (APPLICATIONS TO AC NETWORKS): 
Super-position theorem, Thevenin‟s theorem, Norton‟s theorem, maximum power transfer theorem, Reciprocity theorem. Millman‟s theorem, compensation theorem, Tellegen‟s theorem.

Unit 3 LAPLACE TRANSFORM ANALYSIS: 

Unit 4 FOURIER SERIES AND FOURIER TRANSFORM ANALYSIS: 
Exponential form and Trigonometric form of Fourier series, Fourier symmetry, Fourier Integral and Fourier Transform. Transform of common functions and periodic waveforms: Applications of Fourier Transform to network analysis.

Unit 5 Z TRANSFORM ANALYSIS: 

Text Books:

Reference Books
1. .Kuo, “Network Analysis & Synthesis”, Wiley India.
2. ME Van-Valkenberg; “Network Analysis”, Prentice Hall of India

Outcome of the Course:
Having successfully completed this course, the student will demonstrate:
- An ability to design and analyse electrical circuits.
- An ability to control AC and DC circuits by using Basic Electrical devices.
- An ability to visualize and work on laboratory and multi-disciplinary tasks.

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Course Structure & Syllabus of B.Tech – Electrical Engineering
Applicable for Batch: 2017-2021

List of Experiments
1. Verification of principle of superposition with dc and ac sources.
2. Verification of Thevenin’s theorem with dc and ac sources.
3. Verification of Norton’s theorem with dc and ac sources.
4. Verification of Maximum power transfer theorems in ac circuits.
5. Verification of Tellegen’s theorem for two networks of the same topology.
8. Determination of frequency response of current in RLC circuit with sinusoidal ac input.
9. Determination of driving point and transfer functions of a two port ladder network and verify with theoretical values.

Value Added Experiments
1. Verification of Thevenin’s theorem and Norton’s theorem ac source in MATLAB/Simulink.
2. Verification of Maximum power transfer theorems for ac circuit in MATLAB/Simulink.

Approved by the Academic Council at its 6th Meeting held on 13.05.2017

Objectives of the Course

- To empower students to understand the basics of electro mechanical energy conversion & transformer

Unit 1  Principles of Electro-mechanical Energy Conversion
Introduction, Flow of Energy in Electromechanical Devices, Energy in magnetic systems (defining energy & Co-energy), Singly Excited Systems; determination of mechanical force, mechanical energy, torque equation, Doubly excited Systems; Energy stored in magnetic field, electromagnetic torque, Generated emf in machines; torque in machines with cylindrical air gap.

Unit 2  D.C. Machines
Construction of DC Machines, Armature winding, Emf and torque equation Armature Reaction, Commutation, Interpoles and Compensating Windings, Performance Characteristics of D.C. generators.

Unit 2  D.C. Machines (Contd.)
Performance Characteristics of D.C. motors, Starting of D.C. motors; 3- point and 4-point starters, Speed control of D.C. motors: Field Control, armature control and Voltage Control (Ward Leonard method); Efficiency and Testing of D.C. machines (Hopkinson’s and Swinburne’s Test).

Unit 4  Single Phase Transformer

Unit 5 Three Phase Transformers
Construction, three phase transformer phasor groups and their connections, open delta connection, three phase to 2 phase (Scott connection), 6 phase or 12 phase connections, and their applications, parallel operation and load sharing of single phase and three phase transformers, excitation phenomenon and harmonics in transformers.

Text Books:

Reference Books
1. Charles Gross, Electric Machines, T & F, Delhi

Outcome of the Course:

- To familiarise students about dc machines, transformer, current, voltage and various circuit laws involved in analysis.
- To provide students with the basic knowledge of operation and working of DC machines & transformer and their application

List of Experiments
1. To obtain magnetization characteristics of a d.c. shunt generator.
2. To obtain external characteristics of a d.c. shunt generator and compound generator.
3. To obtain efficiency of a dc shunt machine using Swinburne’s test.
4. To perform Hopkinson’s test and determine losses and efficiency of DC machine.
5. To obtain speed-torque characteristics of a dc shunt motor.
6. To obtain speed control of dc shunt motor using (a) armature resistance control (b) field control.
8. To study polarity and ratio test of single phase and 3-phase transformers.

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Value Added Experiments

- To obtain efficiency and voltage regulation of a single phase transformer by Sumpner’s test.
- To obtain 3-phase to 2-phase conversion by Scott connection.
- To determine excitation phenomenon (B.H. loop) of single phase transformer using C.R.O.

Objectives of the Course

- To acquire knowledge regarding the use, measure and analyse the instruments.
- To be able to calculate all the parameters related to measurements.
- To develop an understanding about different instruments that are used for measurement purpose.
- To have knowledge about digital methods used for measurement of different quantities.

Unit 1

**Instrument transformers:** Instrument Transformer and their applications in the extension of instrument range, Introduction to measurement of speed, frequency and power factor.

Unit 2

**Measurement of Parameters:** Different methods of measuring low, medium and high resistances, measurement of inductance & capacitance with the help of AC Bridges, Q Meter.

Unit 3

**AC Potentiometer:** Polar type & Co-ordinate type AC potentiometers, application of AC Potentiometers in electrical measurement

Unit 4

**Magnetic Measurement:** Ballistic Galvanometer, flux meter, determination of hysteresis loop, Measurement of iron losses.

Unit 5

**Digital Measurement of Electrical Quantities:** Concept of digital measurement, block Diagram, Study of digital voltmeter, frequency meter Power Analyzer and Harmonics Analyzer; Electronic Multimeter.

Text Books:

Reference Books

Forest K. Harries,”Electrical Measurement”, Willey Eastern Pvt. Ltd. India.

M.B. Stout ,”Basic Electrical Measurement”, Prentice hall of India,India.

Outcome of the Course:

Develop an understanding of construction and working of different measuring instruments

Develop an understanding of construction and working of different AC and DC bridges and its applications

Develop an ability to use measuring instruments and AC and DC bridges for measurement

List of Experiments

1. Calibration of ac voltmeter and ac ammeter
2. Measurement of phase difference and frequency of a sinusoidal ac voltage using C.R.O.
3. Measurement of low resistance by Kelvin’s double bridge
4. Measurement of voltage, current and resistance using dc potentiometer
5. Measurement of inductance by Maxwell’s bridge
6. Measurement of inductance by Hay’s bridge
7. Measurement of inductance by Anderson’s bridge
8. Measurement of capacitance by Owen’s bridge
9. Measurement of capacitance by De Sauty Bridge
10. Measurement of capacitance by Schering Bridge

Value added Experiments:

1. Measurement of power and power factor of a single phase inductive load and to study effect of capacitance connected across the load on the power factor

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Course Structure & Syllabus of B.Tech – Electrical Engineering
Applicable for Batch: 2017-2021

2. Measurement of form factor of a rectified sine wave and determine source of error if r.m.s.value is measured by a multi-meter

3. Study of Frequency and differential time counter
Course Structure & Syllabus of B.Tech – Electrical Engineering
Applicable for Batch: 2017-2021

Objectives of the Course

- To teach the basic concept of various analog and digital electronic devices, circuits and their application
- To develop ability among students for problem formulation, system design and solving skills
- To have basic knowledge of amplifiers and oscillators

### Unit 1
**FUNDAMENTALS OF SEMICONDUCTORS AND DIODES:** Review of energy bands in solids, Intrinsic and Extrinsic semiconductors, Fermi Level, Transport phenomenon in semiconductors: diffusion current, drift current, mobility, conductivity. The Hall Effect. Generation and recombination of carriers. Special Diodes- LED, Varactor diode, Photo diode, Schottky diode, Tunnel diode; their characteristics and applications.

***Credit:*** 8L

### Unit 2
**BJTs AND FETs** : Construction and characteristics of transistor, Transistor biasing and stability factor analysis. Transistor application as an amplifier and as a switch. Small signal analysis of BJT using re and h-parameter model.

***Credit:*** 8L

### Unit 3
**FEEDBACK AMPLIFIERS AND OSCILLATORS CIRCUITS:** Introduction to positive and negative feedback: Negative feedback -current, voltage, Series and Shunt type. It’s effect on input impedance, output impedance, voltage gain, current gain and bandwidth. Oscillators circuits: Frequency of oscillation and condition for sustained oscillations. Types of oscillator circuits-RC-phase shift, Wein-Bridge, Hartley, Clapp, Colpitt and Crystal Oscillators.

***Credit:*** 8L

### Unit 4
**FUNDAMENTALS OF DIGITAL SYSTEMS:** Combinational Logic Circuits: Review of logic gates and Boolean Algebra, Adder, Subtractor. Introduction to Multiplexers and Demultiplexers & Encoders and Decoders.

**Sequential Logic Circuits:** Introduction to latches, Flip-flops, Registers and Counters.

**OPERATIONAL AMPLIFIERS AND SEMICONDUCTOR MEMORIES:** Introduction to Operational Amplifiers, Characteristics of an ideal op-amp, Inverting and Non-inverting amplifier, Application of op-amp as summer, differential amplifier, Integrator and Differentiator. Semiconductor Memories: Memory organization and classification of memories.

***Credit:*** 8L

### Text Books:
- Boylstead and Neshelsky, "Electronic Devices and Circuits”, PHI

### Reference Books:

### Outcome of the Course:
- Students will be able to build analog and digital electronics circuits
- Students should be able to design and analyze amplifiers
- Students should be able to develop model and analyze oscillators

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Course Structure & Syllabus of B.Tech – Electrical Engineering
Applicable for Batch: 2017-2021

List of Experiments
To Plot V-I characteristics of junction diode and zener diode.
To Plot input / output characteristics for common base transistor.
To Plot input /output characteristics of FET and determine FET parameters at a given operating point.
To determine voltage gain, current gain, input impedance and output impedance of common emitter amplifier.
To determine voltage gain, current gain, input impedance and output impedance and frequency response of R-C coupled common emitter amplifier.
To design R-C Phase shift / Wein Bridge oscillator and verify experimentally the frequency of oscillation.
To study transistor as a switch and determine load voltage and load current when the transistor is ON.
Implementation of All Logic Gates using Universal gates (NAND & NOR both).
To study operation of Adder / Subtractor
To study application of Operational Amplifier as summer integrator and voltage comparator

Value added experiments:
To study operation IC 555 based astable and monostable multibrators.
To study operation of (a) multiplexer using IC 74150 (b) demultiplexer using IC 74138.

**Course Objective**
- To define the various types of education policies
- To understand the role in striving for social change.
- To overview on education and its implications on social changes to the students.

**Unit 1**
6 Hrs
General introduction to the place of learning in society. Learning, education and training.
Changing meanings of education across time and society. A brief historical perspective on education in India.

**Unit 2**
6 Hrs
Social-political arithmetic as a spurious way of understanding education and social change.
Structural functionalist perspectives and structural-conflict perspectives on education

**Unit 3**
7 Hrs

**Unit 4**
7 Hrs

**LEARNING OUTCOME:**
- The students will understand how the education system assesses the importance of education in society.
- The students will be able to take a significant action in area of education to maintain social change.
- The student will be able to participate in the changes required in society.
- Education will be used as a tool to implement adequate changes in society.

Course Objective
- To understand the basic psychological processes and their applications in everyday life.

Unit 1 Introduction
Psychology as a science, perspective, origin and development of Psychology, Psychology in India, Methods: experimental and case study.

Unit 2 Cognitive Processes-Perception
Nature of perception, laws of perceptual organization, learning, conditioning observational learning, memory processing, information processing model, techniques for improving memory.

Unit 3 Motivation and Emotion
Motives: Biogenic and Sociogenic; Emotion: Nature of Emotions, key Emotion.

Unit 4 Personality and Intelligence-Personality

Course Outcome:
- The students will develop an understanding of the various psychological processes to maintain their daily activities.
- The students will understand themselves better.
- The students will be better equipped for life.
- The Students will be able to demonstrate critical and creative thinking and scientific approach to understand human behaviour.

Text Books:

REFERENCE BOOKS:

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Course Objective
To increase the basic understanding of students towards science and technology, and basic implications of science & technology on social development.

Unit 1
Introduction of society, Sociological imagination, the two revolutions and their socio-economic technological and scientific implications; Social significance of science and technology, ideas beyond technology.

Unit 2
Perspectives on relations between science and technology; Sociological perspective on scientific knowledge: Karl Marx, Emile Durkheim and Karl Mannhen’s Sociology of knowledge; Merton’s approach to science and technology.

Unit 3
Ethos of science, Matthew effect in science, Thomas theorem and Mathew effect; Thomas Kunn’s notions paradigm and paradigm-based science, Scientific community and growth of scientific knowledge.

Unit 4
Science in India: science and technology policies in India, Scientific communities and their linkages, national and international Science, Ethics in science & engineering, environment and science and technology

COURSE OUTCOME:
• Enable students to examine the role of science and technology in social and economic development.
• The students will understand perspectives on relations between science and technology.
• The student will be able to understand the scientific temper & its social significance.
• The student will be able to understand and implement technological policies for the betterment of society.

Course Objective
- To introduce the concepts pertaining to ethical and moral reasoning and action
- To develop self – awareness

Unit 1 Introduction
Definition of Ethics; Approaches to Ethics: Psychological, Philosophical, Social.

Unit 2 Psycho-social theories of moral development
View of Kohlberg,Morality and Ideology, Culture and Morality, Morality in everyday context

Unit 3
Ethical Concerns: Work Ethics and Work Values, Business Ethics, Human values in organizations, Self-Awareness: Self Concept: Johari Window, Self and Culture, Self-Knowledge, Self-Esteem

Unit 4

COURSE OUTCOME
- Students will develop an understanding of the ethical values and their application in daily activities
- Students will learn business ethics and work ethically in every sphere.
- Students will understand themselves better and develop healthy interpersonal relationships.
- Students will be able to develop themselves into wholesome personalities.

Objectives of the Course

- The objective of the course is that after studying this subject the student should become familiar with the different modes of electrical power generation, their advantages and limitations.
- He should also become aware of the various components and their working which are involved in the process of electrical power generation.
- He should have fair idea about energy generation and cost structure for revenue generation by energy

**Introduction:** Present energy scenario in India,

**Power Plant Economics and Tariffs:** Load curve, load duration curve, different factors related to plants and consumers, Cost of electrical energy, depreciation, generation cost, effect of Load factor on unit cost. Fixed and operating cost of different plants, role of load diversity in power system economy. Objectives and forms of Tariff including three part tariff; Causes and effects of low power factor, advantages of power factor improvement, different methods for power factor improvements

**Unit 1**

**Introduction:** Present energy scenario in India, Power Plant Economics and Tariffs: Load curve, load duration curve, different factors related to plants and consumers, Cost of electrical energy, depreciation, generation cost, effect of Load factor on unit cost. Fixed and operating cost of different plants, role of load diversity in power system economy. Objectives and forms of Tariff including three part tariff; Causes and effects of low power factor, advantages of power factor improvement, different methods for power factor improvements

**Thermal Power Plant:** Site selection, general layout and operation of plant, Rankine cycle, Function of pulverization, boiler, economizer, super heater, air pre-heater, ESP, turbine and pump. Classification of steam turbines, impulse and reaction turbines velocity diagrams

**Gas Turbine Plant:** Operational principle (Brayton cycle) of gas turbine plant & its efficiency, fuels, open and closed-cycle plants, regeneration, inter-cooling and reheating, role and applications, **Diesel Plants:** Diesel plant layout, components & their functions, its performance, role and applications

**Unit 2**

**Thermal Power Plant:** Site selection, general layout and operation of plant, Rankine cycle, Function of pulverization, boiler, economizer, super heater, air pre-heater, ESP, turbine and pump. Classification of steam turbines, impulse and reaction turbines velocity diagrams

**Gas Turbine Plant:** Operational principle (Brayton cycle) of gas turbine plant & its efficiency, fuels, open and closed-cycle plants, regeneration, inter-cooling and reheating, role and applications, **Diesel Plants:** Diesel plant layout, components & their functions, its performance, role and applications

**Nuclear Power Plant:** Location, site selection, general layout and operation of plant. Brief description of different types of reactors, Moderator material, fissile materials, control of nuclear reactors, disposal of nuclear waste material, shielding.

**Hydro Electric Plants:** Classifications, location and site selection, detailed description of various components, general layout and operation of Plants, brief description of impulse, reaction, Kaplan and Francis turbines, advantages & disadvantages

**Major Electrical Equipment in Power Plants:** Differences between generators used in steam and hydro power plants, requirement of excitation systems, types of excitation systems,

**Cogeneration:** Introduction, types of cycles and technologies, advantages and scope in India

**Captive Generation:** Introduction, advantages and constraints

**Solar power plant:** Working of solar power plant, Solar energy collectors, Photovoltaic cell, merits and limitations of solar power plant

**Wind Energy:** site selection for wind power plant, differences between horizontal and vertical axis turbines, power developed using wind turbine and its efficiency

Introduction to Geothermal energy, Ocean Energy and Tidal energy, Introduction to fuel cells.

Objectives of the Course
- To empower students with the advanced understanding of AC machines.
- To empower students to have sufficient knowledge about synchronous machines
- To empower students to have sufficient knowledge about induction machines

Unit 1
Synchronous Machine I:
Constructional features, Armature winding, EMF Equation, Winding coefficients, equivalent circuit and phasor diagram, Armature reaction, Working principle of synchronous generator, O. C. & S. C. tests, Voltage Regulation using Synchronous Impedance Method, MMF Method, Potier’s Triangle Method, Parallel Operation of synchronous generators, operation on infinite bus, synchronizing power and torque co-efficient

Unit 2
Synchronous Machine II:

Unit 3
Three phase Induction Machine – I:
Constructional features, Rotating magnetic field, Principle of operation, Phasor diagram, equivalent circuit, torque and power equations, Torque-slip characteristics, no load & blocked rotor tests, efficiency, Induction generator

Unit 4
Three phase Induction Machine– II:
Starting, Deep bar and double cage rotors, Cogging & Crawling, Speed Control (with and without emf injection in rotor circuit.)

Unit 5
Single phase Induction Motor:
Double revolving field theory, Equivalent circuit, No load and blocked rotor tests, Starting methods, repulsion motor. AC Commutator Motors: Universal motor, stepper motors

Text Books:
- P.S.Bhimbra, “Electrical Machinery”, Khanna publication.

Reference Books
- Charles Gross, Electric Machines, T & F, Delhi

Outcome of the Course:
- Student becomes familiar with the elementary AC machines other than transformers
- To empower students with the advanced knowledge about principle of operation and applications of synchronous machines.
- To empower students with the advanced knowledge about principle of operation and applications of induction machines.

Objectives of the Course

- In this course student will learn the Crystal structure of materials
- The student will learn about electron theory of materials
- The student will learn about thermal conductivity and study the material properties according to use in electrical equipment.

Unit 1
Crystal Structure of Materials: Bonds in solids, crystal structure, co-ordination number, atomic radius representation of plane distance b/w two planed packing factor, Miller Indices, Bragg’s law and x-ray diffraction, structural Imperfections, crystal growth

Unit 2

Unit 3

Unit 4
Dielectric Materials: Polarization and Dielectric constant, Dielectric constant of mono-atomic, Poly atomic gases and solids, frequency dependence of electronic and ionic polarisabilities, dipolar relaxation, dielectric loss, piezoelectricity, ferroelectric materials

Unit 5
Semiconductor Material And Devices: Properties of semiconductors, Conductivity of insulators, Metals and semiconductor in terms of energy bands, Intrinsic and Extrinsic semiconductors, Concentration of charge carriers, Hall effect, Drift and Diffusion current, semiconductor junction diode, Integrated circuits, semiconducting materials.

Text Books:

Reference Books

Outcome of the Course:

Types of engineering materials.
Various phenomena associated with different types of materials.
Applications of these materials in different fields.

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Objective of the Course

- The student will learn how the hardware and software components of a microprocessor-based system work together to implement system-level features and integrating digital devices into microprocessor-based systems;
- The student will learn the operating principles of, and gain hands-on experience with, common microprocessor peripherals such as timers, USART, and PPI; role of CPU, registers, and modes of operation of 8085 and 8086 microprocessor.
- Learning Microprocessor instruction sets and learning assembly-programming styles, structured assembly language programming.

Unit 1

Unit 2
Register organization, 8085 Microprocessor Architecture, Address, Data and Control Buses, Pin Functions, Demultiplexing of Buses, Generation of Control Signals, Timing diagrams: Instruction Cycle, Machine Cycles, T-States, Concept of Address line and Memory interfacing, Address Decoding and Memory Interfacing.

Unit 3
Classification of Instructions, Addressing Modes, 8085 Instruction Set, Instruction And Data Formats, Writing assembly language programs, Programming techniques: looping, counting and indexing, Stack & Subroutines, Developing Counters And Time Delay Routines, Code Conversion, BCD Arithmetic And 16-Bit Data Operations. The 8085 Interrupts, 8085 vector interrupts.

Unit 4
Memory interfacing, I/O interfacing – memory mapped and peripheral mapped I/O Programmable Interfacing Devices Like 8255A PPI, 8253/8254 Timer, 8259A PIT, 8237 DMA Controller, and Serial I/O Concepts 8251A USART. Interfacing of above chips with 8085, Programming them In Different Modes.

Unit 5
A Architecture of 8086, block diagram, register set, flags, Queuing, concept of segmentation, Pin description, operating modes, addressing modes.

Text Books:
1. Microprocessor Architecture, Programming, and Applications with the 8085 Ramesh S. Gaonkar - Penrnr

Reference Books
1. Microprocessor and Microcontroller fundamentals. The 8085 and 8051 Hardware and Software William Kleitz

Outcome of the Course:
- Identify the basic element and functions of microprocessor.
- Describe the architecture of microprocessor and its peripheral devices.
- Demonstrate fundamental understanding on the operation between the microprocessor and its interfacing devices.
- Apply the programming techniques in developing the assembly language program for microprocessor application.
- An ability to design microprocessors based system, components or process as per needs and specifications.
Course Structure & Syllabus of B.Tech – Electrical Engineering
Applicable for Batch: 2017-2021

List of Experiments
1. To perform 8-bit arithmetic operations between two numbers stored at consecutive memory locations: addition, subtraction, multiplication, division.
2. To perform 16-bit arithmetic operations between two numbers stored at consecutive memory locations: addition, subtraction, multiplication, division.
3. To find the largest and smallest element in an array. Also find the sum of elements in an array.
4. Generation of Fibonacci series in 8085 in hexadecimal sequence.
5. Write and execute the program for finding even and odd numbers.
6. To sort the given number in the ascending and descending order using 8085 microprocessor.
7. Code conversion: decimal number to hexadecimal, hexadecimal number to decimal.
8. To add two 8 bit BCD numbers stored at consecutive memory locations.
9. To subtract two 8 bit BCD numbers stored at consecutive memory locations.
10. To interface programmable peripheral interface 8255 with 8085 and study its characteristics in mode0, mode1 and BSR mode.

Value added Experiments:

To interface 8253 Interface board to 8085 mp and verify the operation of 8253 in six different modes.

To interface a stepper motor with 8051 microcontroller and operate it.
Course Structure & Syllabus of B.Tech – Electrical Engineering

Objectives of the Course

- This course aims to provide knowledge of graph theory applicable for analysis of electrical circuits.
- The students will get understanding of circuit analysis in transient and steady state condition.
- The students will get understanding of different two port network parameters.
- The course will provide knowledge of active and passive filters.

Unit 1: GRAPH THEORY: Graph of a Network, definitions, tree, co tree, link, basic loop and basic cut set, Incidence matrix, cut set matrix, Tie set matrix, Duality, Loop and Node methods of analysis. Analysis of first and second order linear systems by classical method.

Unit 2: TRANSIENT CIRCUIT ANALYSIS: Natural response and forced response, Transient response and steady state response for arbitrary inputs (DC and AC), Evaluation of time response both through classical and Laplace methods.

Unit 3: NETWORK FUNCTIONS AND TWO PORT NETWORKS: Concept of complex frequency, Transform impedances network functions of one port and two port networks, Concept of poles and zeros, Properties of driving point and transfer functions.

Two Port Networks: Characterization of LTI two port networks; Z, Y, ABCD, A’B’C’D’, g and h parameters, Reciprocity and symmetry, Inter-relationships between the parameters, Inter-connections of two port networks, Ladder and Lattice networks: T & Π representation.

Unit 4: NETWORK SYNTHESIS: Positive real function; definition and properties; properties of LC, RC and RL driving point functions, synthesis of LC, RC and RL driving point immittance functions using Foster and Cauer first and second forms.

Unit 5: FILTERS: Introduction, Classification of filters, Image parameters and characteristics impedance, passive and active filter, low pass, high pass, constant K type, M derived filters and their design.

Text Books:

Reference Books
Kuo, “Network Analysis & Synthesis”, Wiley India.
ME Van-Valkenberg; “Network Analysis”, Prentice Hall of India

Outcome of the Course:

- An ability to design and analyse electrical circuits.
- An ability to control AC and DC circuits by using Basic Electrical devices.
- An ability to visualize and work on laboratory and multi-disciplinary tasks.

List of Experiments
To determine node voltages and branch currents in a resistive network using MULTI-SIM software. To obtain Thevenin’s equivalent circuit of a resistive network.

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Course Structure & Syllabus of B.Tech – Electrical Engineering
Applicable for Batch: 2017-2021

To obtain transient response of a series R-L-C circuit for step voltage input using MULTI-SIM software.
To obtain transient response of a parallel R-L-C circuit for step current input using MULTI-SIM software.
To obtain transient response of a series R-L-C circuit for alternating square voltage waveform using MULTI-SIM software.
To obtain frequency response of a series R-L-C circuit for sinusoidal voltage input using MULTI-SIM software.
To determine line and load currents in a three phase delta circuit connected to a 3-phase balanced ac supply.
To plot magnitude, phase and step response of a network function using MULTI-SIM software.
To determine Z, Y, G, H and transmission parameters of a two part network.
To obtain transient response of output voltage in a single phase half wave rectifier circuit using capacitance filter.
Verification of cascade connection of 2, two -port networks.

Value added Experiments
Verification of superposition theorem using MULTI-SIM software.
Verification of reciprocity theorem using MULTI-SIM software.
Course Structure & Syllabus of B.Tech – Electrical Engineering

Applicable for Batch: 2017-2021

LTP | Credit | Subject Category | Year | Semester |
--- | --- | --- | --- | --- |
3 0 2 | 4 | DC | 3rd | V |

Objectives of the Course

- To introduce the state variable representation of continuous and discrete data control systems, stability analysis and time response analysis using state model,
- The concepts of controllability and observability, basic concepts of digital control systems, their stability analysis,
- Use of state feedback for pole placement design, basic concepts and stability analysis of non linear systems

The Control System: Open loop & closed control; servomechanism, Physical examples.

Unit 1
Transfer functions, Block diagram algebra, Signal flow graph, Mason’s gain formula
Reduction of parameter variation and effects of disturbance by using negative feedback

Time Response analysis: Standard test signals, time response of first and second order systems, time response specifications, steady state errors and error constants.

Controllers: Introduction to P, PI, & PID controller. performance indices

Unit 2
Control System Components: Constructional and working concept of ac servomotor, synchros and stepper motor.

Concept of Stability: Routh-Hurwitz criteria, Root Locus Technique

Frequency response Analysis: Frequency response, correlation between time and frequency responses, polar and inverse polar plots, Bode plots: gain margin and phase margin.

Unit 3
Stability in Frequency Domain: Nyquist stability criterion, relative stability.

Introduction to Design: The design problem and preliminary considerations lead, lag and lead-lag networks, design of closed loop systems using compensation techniques in time domain and frequency domain.

Unit 4

Text Books:

Reference Books

Outcome of the Course:

- Possess in-depth knowledge of concepts from classical control theory, understand the concept of transfer function.
- Find out the time response of a given system and design of different basic controller (P, PI, PID)
- Understand the basic knowledge of servo & servomotor.
- Gain knowledge of finding out system stability in time and frequency domain.
- To draw different plots of control system and compensation design using these plots.

List of Experiments

1. To determine response of first order and second order systems for step input for various values of constant ‘K’ using linear simulator unit and compare theoretical and practical results.
2. To study P, PI and PID temperature controller for an oven and compare their performance.
3. To study and calibrate temperature using resistance temperature detector (RTD)
4. To design Lag, Lead and Lag-Lead compensators using Bode plot.

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Course Structure & Syllabus of B.Tech – Electrical Engineering
Applicable for Batch: 2017-2021

5. To study DC position control system
6. To study synchro-transmitter and receiver and obtain output V/S input characteristics
7. To determine speed-torque characteristics of an ac servomotor.
8. To study performance of servo voltage stabilizer at various loads using load bank.
9. To study behaviour of separately excited dc motor in open loop and closed loop conditions at various loads.
10. To study PID Controller for simulation proves like transportation lag.

Software based experiments (Use MATLAB, LABVIEW software etc.)
1. To determine time domain response of a second order system for step input and obtain performance parameters.
2. To convert transfer function of a system into state space form and vice-versa.
3. To plot root locus diagram of an open loop transfer function & determine range of gain ‘k’ for stability.
4. To plot a Bode diagram of an open loop transfer function.
5. To draw a Nyquist plot of an open loop transfer functions and examine the stability of the closed loop system.

Approved by the Academic Council at its 6th Meeting held on 13.05.2017

### Objectives of the Course
- To give an overview of power system and its various components and their importance.
- Calculation of line parameters, evaluation of line performance
- Mechanical aspects of overhead transmission line, underground cables, their constructional features

#### Unit 1
**POWER SYSTEM COMPONENTS:** Different types of supply system and their comparison, Transmission line configurations, Types of conductors, Skin effect, Kelvin’s law, Proximity effect.

#### Unit 2
**OVER HEAD TRANSMISSION LINES:** Calculation of inductance and capacitance of single phase, three phase, single circuit, and double circuit transmission lines. Representation of short, medium and long transmission lines, Ferranti effect, Surge impedance loading

#### Unit 3
**CORONA AND LINE Insulators:** Corona formation, calculation of potential gradient, corona loss, factors affecting corona, Methods of reducing corona and interference. Electrostatic and electromagnetic interference with communication lines. Types of insulators and their application, Potential distribution over a string of insulators, Methods of equalizing the potential, String efficiency

#### Unit 4
**Mechanical Design of Transmission Lines:** Catenary curve, Calculation of sag & tension, Effects of wind and ice loading, Sag template, Vibration dampers, Types of towers and their design

#### Unit 5
**Insulated Cables:** Types of cables and their construction, Dielectric stress, Grading of cables, Insulation resistance, Capacitance of single phase and three phase cables, Dielectric losses, Heating of cables.

### Text Books:
3. Ashfaq Husain, “Power System”, CBS Publishers & Distributors, India

### Reference Books

### Outcome of the Course:
- The students should be able to know about the overhead and underground types of transmission systems,
- The students should be able to know about different mathematical models to represent different types of transmission lines and evaluate their performance.
- They should also be able to design an overhead transmission line including mechanical aspects.
- They will also know about different types of cables used in case of electrical power systems.

### List of Experiments
- To compute line parameters for a single phase transmission line
- To compute line parameters for a three phase short transmission line
- To compute line parameters for a three phase medium transmission line
- To compute line parameters for a three phase long transmission line
- Verification of Ferranti Effect for Different Length Transmission Lines
- To calculate sag in case of transmission lines
- To calculate voltage regulation of transmission line using MATLAB
- To carry out modelling of 3 phase AC cable

Approved by the Academic Council at its 6th Meeting held on 13.05.2017

Objectives of the Course

- The concept of electromagnetic field
- The electromagnetic wave and their propagation
- Transmission lines and wave guides.

COORDINATE SYSTEMS AND TRANSFORMATION:
Cartesian Coordinates, Circular Cylindrical Coordinates, Spherical Coordinates

Unit 1
COORDINATE SYSTEMS AND TRANSFORMATION: Cartesian Coordinates, Circular Cylindrical Coordinates, Spherical Coordinates

ELECTROMAGNETIC WAVE PROPAGATION:
Faraday’s Law, Electromotive Forces, Displacement Current, Derivation of Maxwell’s Equations For Static and Time-Varying Fields, Differential and integral forms, concept of displacement current, Boundary conditions.

Unit 2
ELECTROMAGNETIC WAVE PROPAGATION:
Faraday’s Law, Electromotive Forces, Displacement Current, Derivation of Maxwell’s Equations For Static and Time-Varying Fields, Differential and integral forms, concept of displacement current, Boundary conditions.

ELECTROMAGNETIC WAVE PROPAGATION APPLICATIONS:

Unit 3
ELECTROMAGNETIC WAVE PROPAGATION APPLICATIONS:

TRANSMISSION LINES:

Unit 4
TRANSMISSION LINES:

WAVEGUIDES:
Wave Guides: Introduction to Planar (Rectangular) Waveguides, Derivation of TE and TM Modes, TEM Mode, Impedance and characteristics impedances. Transmission line analogy for wave guides, Attenuation and factor of wave guides, Resonators.

Unit 5
WAVEGUIDES:
Wave Guides: Introduction to Planar (Rectangular) Waveguides, Derivation of TE and TM Modes, TEM Mode, Impedance and characteristics impedances. Transmission line analogy for wave guides, Attenuation and factor of wave guides, Resonators.

Text Books:

Reference Books

Outcome of the Course:

- The students will understand the nature of electric field and magnetic field.
- The students will be able to analyse and solve the problems involving the electromagnetic waves.

Objectives of the Course

- To make students understand the Identification, classification construction, working principle and application of various transducers used for Displacement measurement, Temperature measurement, Level measurement, and Miscellaneous measurement.
- To make the students learn the selection procedure, applications and comparative study of various Transducers.
- To understand the role of the various elements of a measurement system and to specify and evaluate a measurement system for a given application.
- To make the students evaluate the technological and physical limitations of a specific sensor and propose a suitable sensor for a given measurement situation.

**Transducers:**

**Unit 1**

**Unit 2**
Pressure Sensors: Types, Manometers, Bourdon Tube – C Type, spiral type, Helical Type, Bellows, Diaphragms, Pressure Measurement using: LVDT, Potentiometer, Photoelectric Transducer.

**Unit 3**
Opto-Electronic Sensors: Photo-emissive transducer, Photo-Conductive Transducer, Photo-Voltaic Transducer, Transducer, Applications of Photo Diode and Photo Transistors as transducers, Optical encoders, Stroboscope, Fibre Optic Sensors.

**Unit 4**

Text Books:

Reference Books

Outcome of the Course:

- Working principles of sensors and transducers.
- Measurement of physical quantities like displacement, temperature, pressure, etc.
- Applications of various transducers used in industry.
- Analyze smart sensors for their relevant applications.

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
List of Experiments

1. Measurement of unknown resistance with the help of a dc potentiometer.
2. To determine the characteristics of LVDT
3. To determine the characteristics of RVDT.
6. Temperature measurement using thermocouple.
7. Temperature measurement using RTD.
8. Pressure measurement using Bourdon Tube.
10. Displacement measurement using IR Sensor.

Objectives of the Course

- To study about various digital modulation techniques
- To study about data handling and data reception systems
- To study about various control systems used and the types of command system
- To study about telemetry systems

Sampling Fundamentals: Introduction to sampling theorem and sampling process, convolution, computing minimum sampling rate. Aliasing Errors.

Digital Modulation Techniques: Review of PCM, DPCM, Methods of binary data transmission, Data Formats, DM code converters, PSK, QPSK, FSK, probability of error, phase ambiguity resolution and differential encoding, error detection, error correction, error correction codes.

Data Handling System: Block schematic, Sensors, Signal conditioners, Multiplexing - high level and low level, ADC- range and resolution, Word Format, Frame format, Frame synchronizer codes, R. F. links, X24, RS 422, RS423, RS 232C interfaces, Multi terminal configuration, Multiplier & Concentrator, Data Modems, Data transmission over telephone lines.

Data Reception Systems: Bit synchronizers, frame synchronizers, subframe synchronizers, PLL, Display systems.

Remote Control: Communication based processing control systems, pipelines, Operational security systems components, Pipeline control, Power system control, Programmable controllers for factory automation.

Command: Tone command system, Tone digital command system, ON/OFF command and data commands.

Aerospace Telemetry: Signal formation and conversion, Multiplexing techniques in telecontrol, Industrial telecontrol installations, reliability in telecontrol installations.

Text Books:
1. Patranabis,” Telemetry Principles: Tata Mcgrew Hill.
2. Schweber,” Data Communication “ Mcgraw Hill.

Reference Books
1. Berder & Menjewlse,” Telemetry Systems“.

Outcome of the Course:

- To have knowledge about data sampling and digital modulation techniques used
- To have knowledge and understanding of requirements for data handling and data analysis
- To have knowledge about the techniques to be used for data transmission using various techniques

List of Experiments
1. To plot the Characteristics of Strain gauge
2. To plot the Characteristics of load cell
3. To plot the Characteristics of thermistor
4. To plot the Characteristics of RTD
5. To plot the Characteristics of Thermocouple
6. To study the Loading effect of Potentiometer
7. To plot the Characteristics of Synchrons
8. To plot the Characteristics of LVDT
9. To plot the Characteristics of Piezo-electric transducer

Approved by the Academic Council at its 6th Meeting held on 13.05.2017

Objectives of the Course
- To study the mathematical model of systems
- To study time response analysis
- To study the frequency analysis

Control Concepts and Mathematical Modeling

System Representation and Control Components

Time Response Analysis

Frequency Response Analysis

Control System Design

Text Books:

Reference Books

Outcome of the Course:
- Apply the knowledge about the Automatic Control System to use them more effectively.
- Fulfill the demands of the industry about the analysis and control of the dynamic systems.
- Describe the State Space Analysis and use it for the stability analysis of the dynamic systems.
- Differentiate different types of controllers and design them for specific applications.
- Design Lag, Lead, Lag-Lead Compensator using Bode Plot and Root Locus techniques and suggest the relative stabilities of different dynamic systems.

List of Experiments
1. To convert a given first order system from transfer function model to state space model.
2. To calculate transfer function of a RLC circuit and study its transient response.
3. To study transient and steady state response of a 1st order system.
4. To study transient and steady state response of a 2nd order system.
5. To study transient and steady state response of a higher order system.
7. To analyse stability of a given plant using Routh-Hurwitz criteria and Bode plot.
8. To design a P controller for a given system.
9. To design a PI controller for a given system.
10. To design a PID Controller for a given system.

**Objectives of the Course**
- To introduce the fundamentals of various types of electrical heating and electrical welding applications.
- To introduce the fundamentals of refrigeration, air conditioning and illumination engineering.
- To have knowledge about the types of electric traction systems and the fundamentals related to electric traction.
- To have knowledge about the types of electric drives and their control mechanisms specially when used in electric traction.

**Unit 1**
**Electric Heating:** Advantage & methods of electric heating, Resistance heating, Electric arc heating, Induction heating, Dielectric heating.

**Unit 2**
**Electric Welding:** Electric arc welding, Electric resistance welding, Electric Welding control.

**Electrolyte Process:** Principal of Electro deposition, laws of Electrolysis, application Electrolysis.

**Illumination:** Various definition, laws of Illumination, requirement of good lighting, Design of indoor lighting & outdoor lighting system.

**Unit 3**
**Refrigeration and Air Conditioning:** Refrigeration system, domestic Refrigerator, water cooler, Types of Air conditioning, Window air conditioner.

**Unit 4**
**Electric Traction – I:** Types of electric traction, system of track electrification, Traction mechanics-types of services, speed time curve and its simplification, average and schedule speeds, Tractive effort specific energy consumption, mechanics of train movement, coefficient of adhesion and its influence.

**Electric Traction – II:** Salient features of traction drives, Series-parallel control of dc traction drives (bridge traction) and energy saving, Power Electronic control of dc & ac traction drives, Diesel electric traction.

**Text Books:**

**Reference Books**

**Outcome of the Course:**
- Have the knowledge of various types of methods used for heating and welding.
- A student should be able to select a suitable heating method depending on the types of material to be heated.
- Have proper knowledge of different welding methods and electroplating.
- Electroplating and its applications.
- A student should be able to design the lighting system for various applications.
- Have understanding of Different types of traction systems particularly electric traction system, types of services and their characteristics.

Objectives of the Course

- To study about discrete data systems
- To study state space analysis involving concepts of controllability and observability
- To study different types of stability methods.

Unit 1
Discrete Data Systems: Introduction to discrete time systems, sample and hold circuits, pulse transfer function, representation by differential equations and its solution using z-transform and inverse-z transforms, analysis of LTI systems, unit circle concepts. 8L

Unit 2
State Space analysis: State equations for dynamic systems, State equations using phase, physical and canonical variables, realization of transfer matrices, Solution of state equation, concepts of controllability, observability, Controllability and Observability tests. 8L

Unit 3
Non-linear System & Linearization: Introduction to non-linear system and their state variable representation. Linearization, describing function of various non-linearities. Stability analysis using describing function. 8L

Unit 4
Stability: Liapunov’s method, generation of Liapunov’s function, Popov’s criteria, design of state observers and controllers, adaptive control systems, model reference. 8L

Unit 5
Optimal Control: Introduction, formation of optimal control problems, calculus of variation, minimization of functions, constrained optimization, dynamic programming, performance index, optimality principles, Hamilton – Jacobian equation, linear quadratic problem, Ricatti II equation and its solution, solution of two point boundary value problem 8L

Text Books:
1. K. Ogata, "Modern Control Engineering", Prentice Hall of India.

Reference Books

Outcome of the Course:

- Should be able to convert a given system into a state space model
- Should be able to check for a given system whether it is controllable and observable or not
- Should be able to apply Liapunovs method and popovs methods and optimal control for control of system

List of Experiments
1. To convert a given system of 2nd order from transfer function model to state space model
2. To convert a 3rd order system from transfer function model to state space model
3. To check the controllability of a given system
4. To check the observability of a given system
5. To assess the stability of a 2nd order system using Liapunovs method
6. To assess the stability of a 2nd order system using Popovs method
7. To solve problems based on constrained optimization
8. To solve problems based on two point boundary problems

<td>WIND AND SOLAR ENERGY SYSTEMS</td>
<td>3 0 2</td>
<td>4</td>
<td>Elective</td>
<td>3rd</td>
<td>V</td>
</tr>
</tbody>
</table>

**Objectives of the Course**
- Understand the energy scenario and the consequent growth of the power generation from renewable energy sources.
- Understand the basic physics of wind and solar power generation.
- Understand the power electronic interfaces for wind and solar generation.
- Understand the issues related to the grid-integration of solar and wind energy systems.

**Physics of Wind Power:** History of wind power, Indian and Global statistics, Wind physics, Betz limit, Tip speed ratio, stall and pitch control, Wind speed statistics-probability distributions, Wind speed and power-cumulative distribution functions.

**The Solar Resource:** Introduction, solar radiation spectra, solar geometry, Earth Sun angles, observer Sun angles, solar day length, Estimation of solar energy availability.

**Solar photovoltaic:** Technologies-Amorphous, monocrystalline, polycrystalline; V-I characteristics of a PV cell, PV module, array, Power Electronic Converters for Solar Systems, Maximum Power Point Tracking (MPPT) algorithms. Converter Control.

**Network Integration Issues:** Overview of grid code technical requirements. Fault ride-through for wind farms - real and reactive power regulation, voltage and frequency operating limits, solar PV and wind farm behavior during grid disturbances. Power quality issues. Power system interconnection experiences in the world. Hybrid and isolated operations of solar PV and wind systems.

**Solar thermal power generation:** Technologies, Parabolic trough, central receivers, parabolic dish, Fresnel, solar pond, elementary analysis.

**Text Books:**

**Reference Books**

**Outcome of the Course:**
- To be able to apply the concepts of renewable energy sources for electricity generation
- To be able to apply the concepts of grid integration with renewable sources
- To evaluate the options and estimate the energy generation through renewable sources so be able to

**List of Experiments**
1. Analysis of Solar Photovoltaic panel Characteristics
2. Modelling of Solar Array
3. Design and Simulation of Solar PV Model
4. Solar cell modelling and study of characteristics
5. To study modelling of solar power converter
6. To study a grid connected PV array for high power rating
7. To study the effect of change in parameters of wind turbine on power output

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Subject Code | EE347  
Subject Title | HIGH VOLTAGE ENGINEERING  
LTP | 3 1 0  
Credit | 4  
Subject Category | Elective  
Year | 3rd  
Semester | V

Objectives of the Course
• To introduce the basic concepts of high voltage engineering including mechanism of electrical breakdown in gases, liquids and solids,
• To understand high voltage ac/dc and impulse generation and measurement,
• To have knowledge about overvoltage's and their causes, importance of insulation coordination
• To understand measurement of partial discharges and loss tangent, high voltage testing and condition monitoring of power equipment’s

Break Down In Gases
- Ionization processes, Townsend’s criterion, breakdown in electronegative gases, time lags for breakdown, streamer theory, Paschen’s law, breakdown in non-uniform field, breakdown in vacuum.

Unit 1
Break Down In Liquid Dielectrics Classification
- Characteristics of liquid dielectric, breakdown in pure liquid and commercial liquid.

Break Down In Solid Dielectric
- Intrinsic breakdown, electromechanical breakdown, breakdown of solid, dielectric in practice, breakdown in composite dielectrics.

Generation of High Voltage and Currents
- Generation of High direct Current Voltage, generation of impulse voltages generation of impulse currents, tripping and control of impulse generators.

Measurement of High Voltage and Currents

Over Voltage Phenomenon & insulation Coordination
- Lightning Phenomenon as natural cause for over voltage, over voltage due to switching surges and abnormal conditions, Principal of insulation coordination.

Non-Destructive Testing
- Measurement of direct current resistively, measurement of dielectric constant and loss factor, partial discharge measurements.

Unit 5
High voltage testing
- Testing of insulator & bushing, testing of isolators and circuit breakers, testing of cables, testing of transformers, testing of surge arresters, radio interference measurements.

Text Books:

Reference Books
1. E Kuffel and W.S.Zacngal , High voltage Engineering:, Pergamum Press 
5. Subir Ray.” An Introduction to High Voltage Engineering” Prentice Hall of India.

Outcome of the Course:
• To analyse the breakdown mechanisms of electric breakdown in liquids, gases, and solids.
• To have understanding of fundamental concepts of high voltage AC, DC, and impulse generation.
• To be able to apply techniques for high voltage measurements and non-destructive test techniques in high voltage engineering.
• To become familiar with testing and condition monitoring of power equipments.

OBJECTIVE:
The objective of this course is familiarizing the students with the different kinds of data structure used for information storage and data retrieval in different applications of computer science.

Unit 1: Introduction to Algorithms & Data Structure (8)

Arrays: Introduction, Single and multi-Dimensional Arrays, address calculation, application of arrays, Operations defined: traversal, insertion and deletion.

Stacks: Stacks, Array representation of stack, Applications of stacks, Conversion of Infix to Prefix and Postfix Expressions, Evaluation of postfix expression using stack

Unit 2: Queues & Link List (7)

Queue: Queue, Array representation and implementation of queues, Circular queues, Operations on Queue: Create Add, Delete, and Full and Empty, De-Queue, Priority queues, Applications of Queues.

Linked Lists: Concept of linked list, Representation and implementation of singly linked list, Circular linked list, doubly linked list, Operations on Linked lists, Concepts of header linked lists, applications of linked lists.

Unit 3 Trees (8)

Binary Search Tree: Binary Search Tree (BST), Insertion and Deletion in BST, Complexity of Search Algorithm, Path Length, AVL Trees, B-trees.

Unit 4 Graphs (7)

Unit 5: Searching, Sorting & File Handling: (9)

Searching &hashing: linear search, binary search, Hash Table, Hash Functions, Collision Resolution Strategies, Hash Table Implementation

Sorting: Bubble sort, Insertion sort, Selection sort, Quick sort, Merge sort, Heap Sort.

File Handling: Introduction to file handling, Data and Information, File concepts, File organization, files and streams, working with files.

COURSE OUTCOME:
At the end of the course, the student can:

CO1. Students develop knowledge of basic data structures for storage and retrieval of ordered or unordered data. Data structures include: arrays, linked lists, binary trees, heaps, and hash tables.

CO2. Students develop knowledge of applications of data structures including the ability to implement algorithms for the creation, insertion, deletion, searching, and sorting of each data structure.

CO3. Students learn to analyze and compare algorithms for efficiency using Big-O notation.

CO4. Students implement projects requiring the implementation of the above data structures.

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Objective:
The objective of this course is familiarizing the students with the concepts of object oriented programming and its implementation in Java programming language.

Unit 1: Object Oriented Programming, Static & Dynamic models (9)
Object Oriented Programming: Objects and classes, generalization and inheritance, aggregation, abstract class.
Static and dynamic models: UML diagrams: Class diagram, interaction diagram: collaboration diagram, sequence diagram, state diagram, activity diagram.

Unit 2: Introduction to Java, Class, Objects (8)
Introduction to Java: Importance and features of Java, Keywords, constants, variables and Data Types, Operators and Expressions.
Branching and looping: if-else, switch, while, do, for statements, jump statements: break, continue, and return.
Introducing classes, objects and methods: defining a class, adding variables and methods, creating objects, constructors, inheritance, overriding, final class, and use of super keyword.

Unit 3 Arrays & Interface in Java (7)
Arrays and Interfaces: Creating an array, string array, dynamic array, abstract classes, interfaces, extending interfaces, IO stream handling, and packages.

Unit 4 Multithreading, Exception handling, Applet and AWT (8)
Multithreading: Thread, thread life cycle, extending thread class, implementing runnable interface, thread synchronization.
Exception handling: inbuilt and user defined exceptions.
Applet and AWT: Introduction to applet, event handling, event classes and listeners, handling images.

Unit 5: Introduction to Swings (7)
Introduction to Swings: Features of swings, swing UI elements, sample cases developing user interfaces using Swing UI classes, design animation, sound and video application using swings.

Course Outcome:
At the end of the course, the student can:
CO1. Able to learn Identify classes, objects, members of a class and relationships among them needed for a specific problem.
CO2. Able to learn Java application programs using OOPS principles and proper program structuring.
CO3. Able to Java programs to implement error handling techniques using exception handling.
CO4. Able to GUI programs in java and embed with web pages.

OBJECTIVE:
This course aims to educate students on the role of a well-structured relational database management system (RDBMS) to the efficient functioning of an organization. This course covers theory and practice in designing a relational database management system with example of a current database product of MYSQL. Students also learn about the important concepts of database integrity, security and availability with techniques like normalization, concurrency control and recoverability control.

Unit 1: Introduction to Database System
Introduction: Data base System Applications, data base System VS file System, Data Abstraction, Instances and Schemas, data Models: the ER Model, Relational Model & Other Models , Database Languages, data base Users and Administrator, data base System Structure, Storage Manager, the Query Processor, Two/Three tier architecture.

Unit 2: E-R modeling Data Base Design

Unit 3 Relational Model & SQL
Relational Model: Structure of relational Databases, Relational Algebra, Relational Calculus, Extended Relational Algebra
SQL:Form of Basic SQL Query, Nested Queries, Aggregative Operators, NULL values, Logical operators, Outer Joins, Complex Integrity Constraints in SQL.

Unit-4 Database Design Concepts
Database Design: Schema refinement, Different anomalies in designing a Database, Decompositions , Problem related to decomposition, Functional Dependency, Normalization using functional dependencies, 1NF, 2NF, 3NF & BCNF , Lossless join decomposition, Dependency preserving Decomposition , Schema refinement in Data base Design, Multi valued Dependencies, 4NF, 5NF.

Unit- 5: Transaction & Concurrency
Transaction Management: Transaction-concepts, states, ACID property, schedule, serializability of schedules, concurrency control techniques - locking, timestamp, deadlock handling, recovery-log based recovery, shadow paging.

COURSE OUTCOME:
At the end of the course, the student will able to learn:
CO1. To work on MySQL database management system.
CO2. To create database and query the database for information retrieval.
CO3. To design a database so that data redundancy, data inconsistency and data loss problems may be resolved.

Objective:
The objectives of this course is to learn concepts of Discrete Mathematics and by applying the algorithms to solve the problems related to Recursion, combinatorial mathematics and problems on basic graph theory.

UNIT I: Unit 1: Introduction to Sets, Relations & Functions

Set Theory: Introduction, Combination of sets, Multisets, Ordered pairs, Set Identities.
Relations: Definition, Operations on relations, Properties of relations, Composite Relations, Equality of relations, Order of relations.
Functions: Definition, Classification of functions, Operations on functions, Recursively defined functions.
Natural Numbers: Introduction, Mathematical Induction.

UNIT II: Unit 2: Posets & Introduction to Boolean algebra

Partial order sets: Definition, Partial order sets, Combination of partial order sets, Hasse diagram.
Lattices: Definition, Properties of lattices – Bounded, Complemented and Complete Lattice
Boolean algebra: Introduction, Axioms and Theorems of Boolean algebra, Algebraic manipulation of Boolean expressions.

UNIT III: Groups & Rings

Algebraic Structures: Definition, Groups, Subgroups and order, Cyclic Groups, Cosets, Lagrange's theorem, Normal Subgroups Permutation and Symmetric groups, Group Homeomorphisms, Definition and elementary properties of Rings and Fields, Integers modulo n.

UNIT IV: Propositional logic, Predicate Logic & Introduction to Probability

Propositional Logic: Proposition, well-formed formula, Truth tables, Tautology, Contradiction, Algebra of proposition, Theory of Inference, Natural Deduction.
Predicate Logic: First order predicate, well-formed formula of predicate, quantifiers, Inference theory of predicate logic.
Combinatorics: Introduction, Counting Techniques, Pigeonhole Principle
Probability: Introduction, Conditional Probability & Independence

UNIT V: Introduction to Graphs & Recurrence Relations

Graphs: Definition and terminology, Representation of graphs, multigraphs, bipartite graphs, Planar graphs, Isomorphism and Homeomorphism of graphs, Euler and Hamiltonian paths, Graph coloring.
Trees: Definition, Binary tree, Binary tree traversal, binary search tree.
Recurrence Relation & Generating function: Recursive definition of functions, Recursive algorithms, Method of solving recurrences

Course Outcomes:
• An ability to perform operations on discrete structures such as sets, functions, relations, and sequences.
• An ability to construct proofs using direct proof, proof by contradiction, proof by cases, and mathematical induction.
• An ability to demonstrate the ability to solve problems using counting techniques and combinatorics in the context of discrete probability.
• An ability to solve problems involving recurrence relations and generating functions.
Course Structure & Syllabus of B.Tech – Electrical Engineering
Applicable for Batch: 2017-2021

- An ability to prove computational theorem

Text Books:

Reference Books:

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
OBJECTIVE:
This course aims to provide the knowledge and understanding the complexity issues of algorithms
1. To introduce algorithms analysis and design techniques
2. To understand and design of algorithms used for searching, sorting, indexing operation

Unit-I

Unit –II
Advanced Data structures: B-Tree, Binomial Heaps, Fibonacci Heaps, Red & Black Tree.
Divide and Conquer: General method, binary search, quick sort, merge sort, heap sort,

Unit –III
Greedy Method: General method, Activity Selection, job scheduling with deadlines, fractional knapsack problem, Minimum cost spanning tree: Kruskal’s and Prim’s, single source shortest path, Huffman tree.
Amortized analysis

Unit – IV
Dynamic Programming: General Method, 0-1 Knapsack, Matrix chain multiplication, longest subsequence, all pair shortest paths,

Backtracking: Travelling Salesman Problem, Graph Coloring, n-Queen Problem, Hamiltonian Cycles and Sum of subsets.

Unit –V
Branch and Bound: Travelling Salesman Problem, Graph Coloring, n-Queen Problem, Hamiltonian Cycles and Sum of subsets.

NP-Hard and NP-Complete problems: Basic Concepts, non-deterministic algorithms, NP-Hard and NP-Complete classes, Cooks Theorem.

LEARNING OUTCOMES
CO1. Analyzing complexity issues of algorithms
CO2. Ability in using the appropriate algorithm for searching, sorting, indexing operations
CO3. Designing of new algorithms
CO4. Student will be able to learn NP Class problems.

OBJECTIVES:
1. To understand the Object-based view of Systems
2. To develop robust object-based models for Systems
3. To inculcate necessary skills to handle complexity in software design.

UNIT 1 (6 L)
J2SE: Concepts and Prerequisites: Data Types, Arrays, Dynamic Arrays, Type Casting, Classes and Objects, Inheritance, Interfaces, Exception Handling, Multi-Threading.
J2EE Architecture: J2EE as a framework, Client Server Traditional model, Comparison amongst 2-tier, 3-tier and N-tier architectures.

UNIT 2 (8 L)

UNIT 3 (8 L)
Java Beans: The software component assembly model- The java beans development kit- developing beans JAR files-Introspection-Bound Properties-Persistence-customizers - java beans API. EJB: EJB architecture- EJB requirements –EJB session beans- EJB entity beans-EJB Clients.

UNIT 4 (6 L)
Java Servlet: Servlet overview, Brief origin and advantages over CGI, Writing small Servlet Programs, Deployment Descriptor, Servlet Life Cycle, Sharing Information, Initializing a Servlet, Writing Service Methods, Filtering Requests and Responses, Invoking Other Web Resources, Accessing the Web Context, Maintaining Client State, Finalizing a Servlet, Session: Definition, Different ways to track sessions.

UNIT 5 (8 L)

LEARNING OUTCOMES
After the completion of the course students will able to learn
CO1. Ability to analyze and model software specifications.
CO2. Ability to abstract object-based views for generic software systems.
CO3. Ability to deliver robust software components.
CO4. The student will be able to design projects using Advance concepts of OOPs.

Text Book:

Reference Book:
5. Cay S Horstmann & Gary Cornell, Core Java Vol II Advanced Features, Addison Wesley

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Objectives:
The objective of this course is to study in-depth understanding of various aspects of cloud computing and be able to implement cloud services in an effective manner.

Unit I
(6 L)
Overview of cloud computing: What is a cloud, Definition of cloud, Definition of cloud, characteristics of cloud, Why use clouds, How clouds are changing, How clouds are changing, Driving factors towards cloud, Comparing grid with cloud and other computing systems, workload patterns for the cloud, “Big Data”, IT as a service.

Unit II
(8 L)
Cloud computing concepts: Concepts of cloud computing, Cloud computing leverages the Internet, Positioning cloud to a grid infrastructure, Elasticity and scalability, Virtualization, Characteristics of virtualization, Benefits of virtualization, Virtualization in cloud computing, Hypervisors, Multitenancy, Types of tenancy, Application programming interfaces (API), Billing and metering of services, Economies of scale, Management, tooling, and automation in cloud computing, Management: Desktops in the Cloud, Security.

Unit III
(8 L)
Cloud service delivery: Cloud service, Cloud service model architectures, Infrastructure as a service (IaaS) architecture, Infrastructure as a service (IaaS) details, Platform as a service (PaaS) architecture, Platform as a service (PaaS) details, Examples of PaaS software, Software as a service (SaaS) architecture, Software as a service (SaaS) details, Examples of SaaS applications, Trade-off in cost to install versus.

Unit IV
(6 L)
Cloud deployment scenarios: Cloud deployment models, Public clouds, Hybrid clouds, Community, Virtual private clouds, Vertical and special purpose, Migration paths for cloud, Selection criteria for cloud deployment.

Unit V
(8 L)

Learning Outcomes:
At the end of course the students will able to learn:

CO1. Analyze the Cloud computing setup with its vulnerabilities and applications using different architectures.

CO2. Apply and design suitable Virtualization concept, Cloud Resource Management and design scheduling algorithms.

CO3. Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds.

CO4. Assess cloud Storage systems and Cloud security, the risks involved, its impact and develop cloud application.

Course Objective
- The objective of this course is to familiarize B.Tech. Students with the roles, responsibilities, and skills required of modern managers.
- This course will present the concepts of management as it applies to current thinking in the workplace.

Unit 1 Overview of management
Definition-Management-Role of managers-Organization and the internal and environmental factors –Trends and Challenges of Management in India.
Directing – delegation –span of control– communication, Controlling

Unit 2 Management Information
Introduction to functional areas of management, Operations management, Human resources management, Marketing management, Financial management

Unit 3 Planning Approach to Organizational Analysis
Design of organization structure; job design and enrichment; job evaluation and merit rating

Unit 4 Motivation and Productivity
Theories of motivation, Leadership styles and Managerial grid. Co-ordination, monitoring and control in organizations. Techniques of control; Few Cases on current management issues in India

COURSE OUTCOME:
- To present the topics in management, management theories, while at the same time focusing on practical applications in the real world especially for engineers.
- Evaluate the global context for taking managerial actions of planning, organizing and controlling.
- Assess global situation, including opportunities and threats that will impact management of an organization.
- Integrate management principles into management practices.

TEXT BOOKS:

LTP: 2-0-0 Credit: 2

Course Objective
- To increase awareness for relevance of positive emotions at workplace.
- To equip students with psychological skills to maximize happiness and virtues like compassion, love and wisdom through experiential, workshop based and interactive activities along with assigned lectures and reading

Unit 1 What is positive psychology?
Introducing Positive Psychology: Definition, goals, assumptions, key concepts and relationships with health psychology, developmental psychology, social psychology and psychology of religion, Meaning and measure of Happiness: Hedonic and Eudemonic perspective, Yogic notion of bliss 7Hrs.

Unit 2 Positive Emotions, Cognitive states and Well-being
What are positive emotions? The broaden and build theory, relevance of positive emotional states for physical, social & psychological resources, Positive emotions and well-being: Happiness and positive behavior, positive emotions and success, resilience, Self-efficacy, Optimism, Hope, Wisdom, Mindfulness and flourishing 9Hrs.

Unit 3 How to enhance well-being?
Use of postures, breathing practices, Sounds, dietary consumption 5Hrs.

Unit 4 Positive Psychology at work place
Maximizing achievement, conflict resolution, gratitude, positive leadership 5Hrs.

COURSE OUTCOME:
- Students learn about modern psychological knowledge of happiness.
- Students acquire skills to cultivate positive emotions.
- Measure and build individual, workplace and educational flourishing; plan, implement and assess positive psychology.
- Students will gain an understanding of what contributes to well-being and how to build the enabling conditions of a life worth living.

TEXT BOOK:

REFERENCE BOOKS:
Course Objective:
- To provide the basic overview of economics in engineering perspectives.
- To increase the understanding of students to solve the engineering problems through economic theories.
- To increase the understanding of students to use economics theories in project investment of industries

Unit 1 General Overview of Economics
Nature and Scope of Economics in engineering perspective; **Theory of Demand Analysis:** Meaning and Types, Law of demand, Exceptions to the Law of Demand, Elasticity of Demand; **Theory of Supply Analysis:** Law of Supply and Elasticity of Supply; Mathematical Explanation on cost, revenue and profit function

Unit 2 Production Function and Its Applications
**Production Function:** Short-run and long-run Production Function; **Mathematical Explanation:** Laws of Returns to Scale & Law of Diminishing Returns Scale; **Concept of Cost and Its Types:** Total cost, fixed cost, variable cost, average variable cost, average fixed cost, marginal cost, explicit and implicit cost; **Break-Even-Analysis:** Importance and graphical presentation, mathematical problems

Unit 3 Time Value of Money and Project Evaluation
**Time Value of Money:** Simple and Compound, Uniform Series Compound Interest Formula, Present Worth Analysis, Future Worth Analysis, Future Value through Annuity, Rate of Return Analysis, Cash flow diagrams; **Depreciation:** Introduction, Straight Line and Declining Balance Method of Depreciation; **Project Evaluation Techniques:** Present Worth Method, Future Worth Method, Annual Worth Method; **Benefit Cost Analysis:** Conventional and Modified B/C Ratio with PW method

Unit 4 Banking and Finance
**Banking Sector:** Functions of the Commercial Bank and Central Bank, Financial Institutions; **Financial Market:** Money Market and Capital Market; **Monetary and Fiscal Policy:** Objectives, Instruments, Tools in Indian Economy; **Inflation:** Causes, Effects and Methods to Control it, Measurement of Inflation- Consumer Price Index and Whole Price Index; Deflation and Stagflation; **Business Cycles:** Various phases, Control and Measurement, Impact on business cycles on economic activities

COURSE OUTCOME
- Students will be able to apply economic principles and calculations to solve engineering projects.
- To students will be efficient to get the idea of production activities and its applications in industries.
- Students will be competent to estimate the present and future value of money on their various investment plans.
- Develop the ability to account for time value of money using engineering economy factors and formulas, as well as the implications and importance of considering taxes, depreciation, and inflation.

Course Objective

- The focus of the programme is on the interaction between literature & Society, and Literature and visual culture
- To discuss how Literature reacts to major changes in society

Unit 1

4Hrs.

Unit 2

7Hrs.
Approaches to the Study of Literature, Reader response to the study of Literature, Interpretation, Appreciation, Evaluation, Special problems in understanding Modern Literature.

Unit 3

9Hrs.
Social dimension of language. problems of multilingual communities, dominance and conflict, shift and attrition, language and the state, language and nation, Indian multilingualism, language variation, language and identity, linguistic prejudice and inequality, standardization, linguistic determinism, critical discourse analysis, and methodological issues.

Unit 4 TEXT

6 Hrs.
Jerome K Jerome: Three Men on a Bummel (selection), Martin Amis: Last Days of Muhammad Atta, Li Ho: A Girl Comb her hair, R.K. Narayan: Malgudi Days (selection)

COURSE OUTCOME

- Students will read critically from a variety of genres, specifically poetry, drama, non fiction, and fiction.
- Students will read literature more carefully and meaningfully, practicing close-reading skills.
- Students will understand the relation between historical and cultural contexts.
- The students will develop a critical understanding of how literature can both uphold and resist existing structures of power.

TEXT BOOKS

Course Outline: The first step of an intensive two step placement training module equips the students to successfully handle the placement program of any on-campus/off-campus company. It not only provides career guidance about the selection process but also helps students in profile building; self-introduction and proactive internship search techniques.

Course Objective:
1. Interpret the questions of aptitude building objectively and prepare for various competitive examinations
2. Understand the optimized approach of dealing with placement questions
3. Learn ways of representing themselves effectively in formal settings

Course Pre/Co-requisite (if any): Understanding of writing concepts, general intelligence of LR, algebra concepts and equation formation, time management and presentation skills covered in Aptitude and Soft Skills I and II.

Detailed Syllabus

UNIT 1 - QUANTITATIVE APTITUDE

<table>
<thead>
<tr>
<th>Subtopic</th>
<th>Hours</th>

</tr>
</tbody>
</table>

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Course Structure & Syllabus of B.Tech – Electrical Engineering
Applicable for Batch: 2017-2021

Question Types 03 hours Introduction to Question types-I: Fill in the blanks, One word Substitution, Spellings, understanding the right word choice, concept of para jumbles and para completion, reading comprehension, verbal analogies, odd man out, phrases and idioms.
Introduction to Question types-II: Error identification, Homophones, Usage of the various figures of speech, commonly confused words and phrases, techniques for tackling synonyms and antonyms.

Reading Comprehensions 02 hours Reading Comprehension: Basics of Comprehensions, different tones of comprehensions, cracking question types like contextual vocabulary, fill in the blanks, true/false questions, reference to context, summary and title of the passage, paraphrasing the text.

UNIT 3- LOGICAL REASONING 10 HOURS

Coding Decoding and Sequences 02 hours Coding Decoding, Cryptarithmetic, Sequence and Series - Finding the missing term/wrong term in the logical sequence of letter/number/word/alphanumeric, Continuous pattern series.

Verbal Analogies and Odd man out 02 hours Verbal Analogy based on various parameters - Antonym / synonym relationship, Quantity and unit, Individual and Group, Product and Raw material, cause and Effect etc.
Odd man out based on several kind of relationship – Relationship based on meaning, functional relationship, even-odd or prime-composite, divisibility rule, etc.

Blood Relation and Direction Sense 02 hours Blood Relation and Direction Sense:
Indicating form / puzzle form / coding form, Direction Sense, Direction puzzles.

Seating Arrangements 02 hours Seating Arrangements – Linear / Circular / Distribution / comparison/ Floor and box arrangement /Quant based arrangements/ etc.

Critical Reasoning – I 02 hours Statement and assumptions, course of action, statement and conclusion, probably true/false.

UNIT 4- NON VERBAL COMMUNICATION 04 HOURS

Types of Non Verbal Communication, Body Language-Exercises and Activities, Error Analysis & Feedback Sharing. 

UNIT 5- ONLINE PROFILING & SOCIAL MEDIA ETHICS 05 HOURS

Social Media ethics and etiquette, Do’s & Don'ts, LinkedIn Profile Development, Example Sharing, Feedback Sharing & Error Analysis.
Suggested Activities & Exercises: (i) Online Portfolio Creation, (ii) Fun Social Media Projects, (iii) LinkedIn profile development project with feedback sharing and error analysis

LEARNING OUTCOME:

By the end of this semester, students will be able to perceive and analyse the requirements of placement trends as detailed information about the selection process would be provided by career guidance. They will be more confident and will be able to develop a professional profile, both online and offline.

Objectives of the Course

- To introduce the basic concepts of power electronics,
- To introduce types of converters, their characteristics, turn-on of SCR, gate characteristics,
- To know about AC-DC Converters, DC - DC Converters, AC-AC and DC-AC Converters.

**Power semiconductor Devices**: Power semiconductor devices their symbols and static characteristics; Characteristics and specifications of switches, types of power electronic circuits. Thyristor – Operation V- I characteristics, two transistor model; Triacs, GTOs, MOSFETs and IGBTs - static characteristics and principles of operation

**Unit 1**: 8L

**Power Semiconductor Devices (Contd)**: Protection of devices; Series and parallel operation of thyristors; Commutation techniques of thyristor

**Unit 2**: 8L

DC-DC Converters: Principles of step-down and step-up chopper and their operation with R-L load; Classification of choppers

**Phase Controlled Converters**: Single phase half wave controlled rectifier with resistive and inductive loads, effect of freewheeling diode; Single phase fully controlled and half controlled bridge converters; Three phase half wave converters, three phase fully controlled and half controlled bridge converters; Effect of source impedance; Single phase and three phase dual converters.

**AC Voltage Controllers**: Principle of On-Off and phase controls; Single phase ac voltage controller with resistive and inductive loads; Three phase ac voltage controllers (various configurations and comparison) Cyclo Converters: Basic principle of operation, single phase to single phase, three phase to single phase and three phase to three phase cyclo converters, output voltage equation

**Inverters**: Single phase series resonant inverter; Single phase bridge inverters

**Unit 4**: 8L

**Unit 5**: 8L

Three phase bridge inverters: 1200 and 1800 mode of operation; Voltage control of inverters; Harmonics reduction techniques; Single phase and three phase current source inverters.

Text Books:

3. Umanand “Power Electronics” Wiley India.

Reference Books

Outcome of the Course:

- Articulate the basics of power electronic devices
- Express the design and control of rectifiers, inverters.
- Design of power electronic converters in power control applications
- Ability to express characteristics of SCR, BJT, MOSFET and IGBT.
- Ability to express communication methods.
- Ability design AC voltage controller and Cyclo-Converter.

List of Experiments

1. To study V-I characteristics of SCR and measure latching and holding currents.
2. To study UJT trigger circuit for half wave and full wave control.
3. To study single-phase half wave controlled rectified with (i) resistive load (ii) inductive load with and without

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
freewheeling diode.
4. To study single phase (i) fully controlled (ii) half controlled bridge rectifiers with resistive and inductive loads.
5. To study three-phase fully/half controlled bridge rectifier with resistive and inductive loads.
6. To study single-phase ac voltage regulator with resistive and inductive loads.
7. To study single phase cyclo-converter
8. To study triggering of (i) IGBT (ii) MOSFET (iii) power transistor
9. To study operation of IGBT/MOSFET chopper circuit
10. To study MOSFET/IGBT based single-phase series-resonant inverter.
11. To study MOSFET/IGBT based single-phase bridge inverter.

Software based experiments (PSPICE/MATLAB)
12. To obtain simulation of SCR and GTO thyristor.
13. To obtain simulation of Power Transistor and IGBT.
15. To obtain simulation of single phase full wave ac voltage controller and draw load voltage and load current waveforms for inductive load.

Objectives of the Course

- To introduce the concepts of Load flow analysis, bus impedance/admittance matrix,
- To introduce load flow problem formulation and solution techniques,
- To introduce fault analysis, steady state and transient stability analysis, load frequency and voltage control and different type of distribution systems.

**Introduction:** Representation of power system components like synchronous machine, transformer, transmission line. One line diagram, Impedance and Reactance diagram, per unit system of calculation, Brief description of power system components like synchronous machine, transformer, busbar, transmission line and isolators.

**Unit 1**

**Unit 2**

- **Fault analysis:** Types of fault – shunt and series, Calculation of fault current and voltages for symmetrical short circuit, Symmetrical components, Sequence impedance, Unsymmetrical short circuits, Open conductor fault, Current limiting reactors

**Unit 3**

- **Stability Analysis:** Introduction to steady state and transient Stability of power systems, Swing equation, Equal area criteria, Solution of swing equation, Methods of improving stability

**Unit 4**

- **Distribution System & Substations:** Different types of distribution systems, Distribution from one and both ends, Ring mains, Unbalanced loading, 3 phase 4 wire and 3 phase 5 wire distribution system, Layout of distribution substation, Rural electrification and grounding.

Text Books:

3. Ashfaq Husain, “Power System”, CBS Publishers & Distributors, India

Reference Books

Outcome of the Course:

- Solve load flow problems using per unit values systems.
- Develop power system network models.
- Formulate and solve load flow problems using various techniques as per the requirements of complexity, computational time and accuracy.
- Calculate power losses in power system and develop economical power system operation scheme.

List of Experiments

1. Computation of Parameters and Modeling of Transmission Lines
2. Formation of Bus Admittance and Impedance Matrices
4. Solution of load flow and related problems using Newton Raphson Method
5. Fault Analysis
7. Transient Stability Analysis of Multi machine Power Systems
8. Electromagnetic Transients in Power Systems

Approved by the Academic Council at its 6th Meeting held on 13.05.2017

Objectives of the Course

- Requirement of bio-medical and its application
- Concept of bio-potential electrodes and measurements related to them.
- Concepts of bio-transducers and measurements related to them.
- Concept of bio-medical instruments and their uses.

ANATOMY AND PHYSIOLOGY:

Unit 1
Basic Cell Functions, Origin of Bio-potentials, Electrical Activity of Cells, components of man
Instrument system, types of bio-medical stems, design factors and limitations of biomedical instruments, terms and transducers to various physiological events.

BIO-POTENTIAL ELECTRODE:
Types of bio-potential electrodes., Electrode-Electrolyte interface, half cell potential, Polarization- polarisable and non-polarisable electrodes, Ag/AgCl electrodes, Electrode circuit model; Electrode and Skin interface and motion artifact. Body surface recording electrodes for ECG, EMG, EEG. Electrodes standards.

BIO-TRANSUDER:
Transduction Principles: Resistive Transducers Strain Gauge- types, construction, selection
materials, Gauge factor, Bridge circuit, Temperature compensation. Strain Gauge type Blood
pressure transducers. Thermo resistive transducer, Inductive Transducers, Capacitive
Transducer Piezoelectric Transducer Bio potential Measurement.

BIOMEDICAL INSTRUMENTATION CARDIAC MEASUREMENT:
Cardiovascular System, Heart Structure, Cardiac Cycle, ECG Theory, ECG Electrodes,
Electrocardiograph, Indicator dilution methods; Measurement of continuous Cardiac output
derived from aortic pressure waveforms, cardiac Arrhythmias; Phonocardiogram,
Measurement of heart rate, Blood pressure, Temperature, Respiration rate, Blood Flow
meters.

BIOTELEMETRY AND ELECTRICAL SAFETY:
Bio-telemetry design, single channel bio telemetry transmitter and receiver system based on
AM, FM and, pulse modulation. Significance of Electrical Danger, physiological effect of
current, ground shock Hazards.

Text Books:

Reference Books
1. J.G. Webster, ‘Medical instrumentation application and design’, Houghton Miffin Co., Boston USA.

Outcome of the Course:
The course provides an understanding of:
- Bio-medical instruments and measurements.
- Principle of working of bio-medical transducers.
- Skills to use modern bio-medical tools and equipment for measurements related to human body.

List of Experiments
1. Pulse measurement
2. Heartbeat measurement
3. Automatic BP measurement
4. Heart sound study using electronics stethoscope

Objectives of the Course
- To study and design the transformers and analyze them
- To study and design the induction motors
- To study and design the synchronous machines and dc machines

Unit 1 DESIGN OF TRANSFORMER Output equation design of core, yoke and windings, overall dimensions, Computation of no load current to voltage regulation, efficiency and cooling system designs.

Unit 2 DESIGN OF SYNCHRONOUS MACHINES Output equations of synchronous machines, specific electric and magnetic loadings, separation of main dimensions, Rotor design, Design of field system. Estimation of performance from design data. Flow chart for design of three phase synchronous generators

Unit 3 DESIGN OF INDUCTION MACHINES Output equations, specific electric and magnetic loadings, factors affecting size of rotating machines, separation of main dimensions, selection of frame size, Rotor design of three phase induction motors. Circle diagram, Estimation of performance from design data. Flow chart for design of three phase induction motors

Unit 4 DESIGN OF DC MACHINES & COMPUTER AIDED DESIGN Output equation, Main dimensions, Design of armature, commutator, flow chart for design of dc machines.

Unit 5 Philosophy of computer aided design, advantages and limitations. Computer aided design approaches analysis-, synthesis and hybrid methods.

Text Books:

Reference Books

Outcome of the Course:
- Students will be able to learn the applications of transformer and induction motor and application regarding representation using piece wise linearization and least square error method.
- Students will be able to formulate the mathematical modelling of transformer design, output equation, design dimension of core and yoke.
- Students will be able to learn the fundamentals of electrical circuits and thermal circuits of cooling method.
- Students will be able to learn the basics of induction motor stator design, electrical and magnetic loading, types and design of winding.

List of Experiments
1. Design using MATLAB/Simulink/C
   1. Design of a single phase transformer for distribution
   2. Design of a three phase distribution transformer
   3. Design of a three phase power transformer
   4. Design of a d.c. machine
   5. Design of a synchronous generator

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Objectives of the Course

• To introduce fundamentals of various renewable energy source
• The technologies used to harness usable energy from solar, wind, fuel cells
• The technologies used to harness usable energy from ocean geothermal Biomass energy sources.

Unit 1
Introduction Various non-conventional energy resources- Introduction, availability, classification, relative merits and demerits, present energy scenario.

Unit 2

Unit 3
Geothermal Energy - Resources of geothermal energy, thermodynamics of geo-thermal energy conversion-electrical conversion, non-electrical conversion, environmental considerations.

Unit 4

Unit 5
Wind Energy: Wind power and its sources, site selection, criterion, momentum theory, classification of rotors, concentrations and augments, wind characteristics. Performance and limitations of energy conversion systems.

Bio-mass - Availability of bio-mass and its conversion theory.

Ocean Thermal Energy Conversion (OTEC) - Availability, theory and working principle, performance and limitations.

Wave and Tidal Wave - Principle of working, performance and limitations. Waste Recycling Plants

Text Books:
1. D.S. Chauhan, "Non-Conventional Energy Resources", New Age International

Reference Books
1. Andra Gabdel, "A Handbook for Engineers and Economists".
2. A. Mani, "Handbook of Solar radiation Data for India".
4. F.R. the MITTRE, "Wind Machines" by Energy Resources and Environmental Series.
5. Frank Kreith, "Solar Energy Hand Book".

Outcome of the Course:
• Identify renewable energy sources.
• Understand the mechanism of solar, wind and ocean energy sources.
• The understanding of various technologies involved in power generation from renewable energy sources.
• Understand the methods to handle the biomass in a productive way.

Objectives of the Course

- To study regarding construction working and purpose of special 3 phase a.c. machines
- To study working and characteristics of servomotors
- To study working, construction and applications of special ac and dc motors

**Poly-phase AC Machines:** Construction and performance of double cage and deep bar three phase induction motors; e.m.f. injection in rotor circuit of slip ring induction motor, concept of constant torque and constant power controls, static slip power recovery control schemes (constant torque and constant power), Introduction to multiphase machines.

**Single phase Induction Motors:** Construction, starting characteristics and applications of split phase, capacitor start, capacitor run, capacitor start, capacitor-run and shaded pole motors.

**Two Phase AC Servomotors:** Construction, torque-speed characteristics, performance and applications

**Stepper Motors:** Principle of operation, variable reluctance, permanent magnet and hybrid stepper motors, characteristics, drive circuits and applications.

**Switched Reluctance Motors:** Construction; principle of operation; torque production, modes of operation, drive circuits

**Permanent Magnet Machines:** Types of permanent magnets and their magnetization characteristics, demagnetizing effect, permanent magnet dc motors, sinusoidal PM ac motors, brushless dc motors and their important features and applications, PCB motors.

**Single phase synchronous motor:** Construction, operating principle and characteristics of reluctance and hysteresis motors; introduction to permanent magnet generators.

**Single Phase Commutator Motors:** Construction, principle of operation, characteristics of universal and repulsion motors; Linear Induction Motors. Construction, principle of operation, Linear force, and applications

**Text Books:**

**Reference Books**
3. M.G. Say “Alternating current Machines”, Pitman & Sons

Outcome of the Course:

- Able to distinguish between normal types of motors and special types of motors
- Understand the working of servomotors, stepper motors reluctance motors
- Understand and able to select the suitable motor for the type of load

Approved by the Academic Council at its 6th Meeting held on 13.05.2017

Objectives of the Course

- To be able to understand the electrical wiring systems for various applications.
- To be able to understand various components of industrial electrical systems.
- To be able to analyze and select the proper size of various electrical system components.

Electrical System Components: LT system wiring components, selection of cables, wires, switches, distribution box, metering system, Tariff structure, protection components- Fuse, MCB, MCCB, ELCB, inverse current characteristics, symbols, single line diagram (SLD) of a wiring system, Contactor, Isolator, Relays, MPCB, Electric shock and Electrical safety practices.

Residential and Commercial Electrical Systems: Types of residential and commercial wiring systems, general rules and guidelines for installation, load calculation and sizing of wire, rating of main switch, distribution board and protection devices, earthing system calculations, requirements of commercial installation, deciding lighting scheme and number of lamps, earthing of commercial installation, selection and sizing of components.

Illumination Systems: Understanding various terms regarding light, lumen, intensity, candle power, lamp efficiency, specific consumption, glare, space to height ratio, waste light factor, depreciation factor, various illumination schemes, Incandescent lamps and modern luminaries like CFL, LED and their operation, energy saving in illumination systems, design of a lighting scheme for a residential and commercial premises, flood lighting.

Industrial Electrical Systems II: DG Systems, UPS System, Electrical Systems for the elevators, Battery banks, Selection of UPS and Battery Banks.

Industrial Electrical System Automation: Study of basic PLC, advantages of process automation, PLC based control system design, Panel Metering and Introduction to SCADA system for distribution automation.

Text Books:

Reference Books
2. Web site for IS Standards.

Outcome of the Course:

- Understand the electrical wiring systems for residential, commercial and industrial consumers, representing the systems with standard symbols and drawings, SLD.
- Understand various components of industrial electrical systems.
- Analyze and select the proper size of various electrical system components.
- To be able to design an illumination scheme for a given building, workshop etc.

**Objectives of the Course**

- To introduce the state variable representation of continuous and discrete data control systems, stability analysis and time response analysis using state model,
- The concepts of controllability and observability, basic concepts of digital control systems, their stability analysis,
- Use of state feedback for pole placement design, basic concepts and stability analysis of non linear systems

**Unit 1**

*Signal Processing in Digital Control*
Basic digital control system, advantages of digital control and implementation problems, basic discrete time signals, z-transform and inverse z-transform, modeling of sample-hold circuit, pulse transfer function, solution of difference equation by z-Transform method.

**Unit 2**

*Design of Digital Control Algorithms*
Steady state accuracy, transient response and frequency response specifications, digital compensator design using frequency response plots and root locus plots.

**Unit 3**

*State Space Analysis and Design*
State space representation of digital control system, conversion of state variable models to transfer functions and vice versa, solution of state difference equations, controllability and observability, design of digital control system with state feedback.

**Unit 4**

*Stability of Discrete System*
Stability on the z-plane and Jury stability criterion, bilinear transformation, Routh stability criterion on rth plane. Lyapunov’s Stability in the sense of Lyapunov, stability theorems for continuous and discrete systems, stability analysis using Lyapunov’s method.

**Unit 5**

*Optimal digital control*
Discrete Euler Lagrange equation, max. min. principle, optimality & Dynamic programming, Different types of problem and their solutions.

**Text Books:**

**Reference Books**

**Outcome of the Course:**

- Possess in-depth knowledge of concepts from classical control theory, understand the concept of transfer function.
- Find out the time response of a given system and design of different basic controller (P, PI, PID)
- Understand the basic knowledge of servo & servomotor.
- Gain knowledge of finding out system stability in time and frequency domain.
- To draw different plots of control system and compensation design using these plots.

Objectives of the Course

- The course has been designed to fulfill the requirement of power industry.
- The course aims to provide basic fundamentals of economics involved with power generation.
- The course aims to provide basic fundamentals of various techniques used for optimization of generation cost.

Economics of Generation: Types of loads, demand factor, group diversity factor and peak diversity factor, load curve, load duration curve, load factor, capacity factor and utilization factor, base load and peak load stations, operating and spinning reserves, load forecasting, capital cost of power plants, depreciation, annual fixed and operating charges.

Unit 1

Tariff and Power Factor Improvement General tariff form and different types of tariffs, Tariff option for DSM. Causes and effect of low power factor, necessity of improvement and use of power factor improvement devices.

Unit 2

Coordinated Operation of Power Plants Advantages of Coordinated operation of different types of power plants, hydrothermal scheduling: short term and long term. Coordination of various types of power plant.

Unit 3

Electrical Equipments in Power Plants Governors for hydro and thermal generators, excitation systems; exciters and automatic voltage regulators (AVR), bus bar arrangements.

Unit 4

EHV Substation Layout of EHV substation, brief description of various equipments used in EHV substations, testing and maintenance of EHV substations equipments. Gas insulated substations (GIS).

Unit 5

Text Books:

Reference Books

Outcome of the Course:

- Understanding the economics of power generation.
- Apply design of various new technologies to optimize the economical relations.
- Formulate and solve coordination problem of power system plants.

Objectives of the Course

- The objectives of the course are to make the student understand the operation and control of a modern power system,
- To introduce various problems encountered in proper operation of the system and their mitigation.
- Students will learn how to analyze a large interconnected power system through digital simulation.

Unit 1

Network Matrices: Graph-theoretic approach for the formation of network matrices – Y BUS, Y BR and Z LOOP; Z BUS building algorithms, Simulation example.

Unit 2

Z BUS matrix. Fault impedance and admittance matrices for various types of faults. Simulation example.

Unit 3

Unit 4

Unit 5

Text Books:

1. Hadi Sadat*: Power System Analysis; (McGraw Hill)

Reference Books

2. Grainger and Stevenson: Power System Analysis; (McGraw Hill)
4. Wood and Wollenberg: Power Generation Operation and Control; Wiley, NY

Outcome of the Course:

- Model the power system for various studies.
- Analyze the system for different short circuit conditions.
- Address the problem of frequency and voltage control under varying load conditions of the system.
- Optimize the generation scheduling in a hydro-thermal mix including the effect of system losses and maintaining the desired operating conditions.
- Analyze large data, in an interconnected power system, obtained through SCADA and utilize them for state estimation, contingency analysis and security assessment.

Subject Code | CS214 | Subject Title | Operating Systems
---|---|---|---
LTP | 3 1 0 | Credit | 4 | Subject Category | DC | Year | 2\textsuperscript{nd} | Semester | IV

**OBJECTIVE:**
This course will facilitate the students to learn the different components and various functioning of an operating system.

**Unit 1: Introduction to Operating System.** (8)

**Unit 2: Management & Scheduling** (6)

**Unit 3 Concurrent Processes & Deadlocks** (8)

*Deadlock:* System Model, Deadlock Characterization, Prevention, Avoidance and Detection, Recovery from deadlock.

**Unit 4 Memory Management** (7)

*Memory Management:* Bare machine, Resident monitor, Multiprogramming with fixed partition, Multiprogramming with variable partition, Multiple base register, Paging, Segmentation, Virtual memory concept, Demand paging, Performance, Paged replaced algorithm, Allocation of frames, Cache memory.

**Unit 5: File Systems & I/O Management** (7)

*File System:* Different types of files and their access methods, various allocation methods.

*I/O Management and Disk Scheduling:* I/O Devices, Organization of I/O functions, Disk Structure, Disk Scheduling (FCFS, SSTF, SCAN, C-SCAN, LOOK).

**COURSE OUTCOME:**
At the end of the course, the student will be able to:

CO1. Learn the general architecture & functioning of computers with operating system.

CO2. Describe, contrast and compare differing structures for operating systems.

CO3. Understand and analyze theory and implementation of: processes, resource control (concurrency etc.).

CO4. Understands physical and virtual memory, scheduling, I/O and files

**OBJECTIVE:**
This course aims to provide the knowledge to understand the concepts and elementary use of .NET library such as development of windows application and website creation through ASP.NET. Students are also able to learn about the different validation and use of controls available in Visual Studio.

**Unit 1: Introduction to Dot Net** (8)

**Introduction to C#:** C# Language Fundamentals, Namespace, Using Directive, Defining custom namespaces, Default Assignment and variable scope, Basic input and output with the console class, Understanding value types and reference types, Converting between value type and reference type: Boxing and Unboxing, Operators and Expressions, Iterations constructs, control flow constructs, Understanding static methods, Method parameter modifiers, Array manipulation, String manipulation, Enumerations, Defining structures.

**Unit 2: Object Oriented Aspects Of C#** (8)
Object Oriented Aspects Of C#: Formal definition of the class, Constructor, type of constructor, Destructor, member access modifier (Public, Private, Protected, Internal and Protected Internal), Encapsulation, Polymorphism: Method Overriding and Method Overloading, Override, Virtual, new Keywords, Inheritance: Types of Inheritance and Inerface ,Abstraction, Sealed Class, Property, Set and get operator ,Indexer, Reflection, Delegates and Events.

**Unit 3 Exception Handling in C#** (8)
Exception, Bug, Error, Exception Handling in .Net, Type of Exception, finally statement, throw and rethrow, difference between System Level Exception and Application Level Exception, Nested try block, Custom Exception, throwing our own exceptions, checked and unchecked operator, handling multiple exception. Garbage collection: Basics, working, finalizing a method, Dispose (), IDisposable Interface, System.GC Type.

**Unit 4 Architecture** (7)
Three tier architecture, MVC architecture, Entity Framework. **Windows Forms:** All about windows form, MDI form, creating Windows applications, adding controls to forms, handling Events, and using various Tools

**Unit 5: Database & Web Application** (8)
ADO.NET- ODBC, OLEDB, and SQL connected mode, disconnected mode, dataset, data view, data table, data column, data row, data-reader, data adapter.

**COURSE OUTCOME:**
On successful completion of this course, student should be able to:
CO1. To have knowledge of the structure and model of the programming language C #.
CO2. To Use the programming language C # for various programming technologies.
CO3. To develop software in C #.
CO4. To design web applications using ASP.NET..

**OBJECTIVES:** The main goal of this course is to help students learn, understand, and practice big data analytics and machine learning approaches, which include the study of modern computing big data technologies and scaling up machine learning techniques focusing on industry applications. Mainly the course objectives are: conceptualization and summarization of big data and machine learning, trivial data versus big data, big data computing technologies, machine learning techniques, and scaling up machine learning approaches.

**Unit 1 Introduction**
Examples, data science articulated, history and context, technology landscape. (6 L)

**Unit 2 Data Manipulation at Scale**
Databases and the relational algebra, Parallel databases, parallel query processing, in-database analytics, MapReduce, Hadoop, relationship to databases, algorithms, extensions, languages, Key-value stores and NoSQL; tradeoffs of SQL and NoSQL (8 L)

**Unit 3 Analytics**
Topics in statistical modeling: basic concepts, experiment design, pitfalls, Topics in machine learning: supervised learning (rules, trees, forests, nearest neighbor, regression), optimization (gradient descent and variants), unsupervised learning. (7 L)

**Unit 4 Communicating Results**
Visualization, data products, visual data analytics, Provenance, privacy, ethics, governance. (7 L)

**Unit 5 Special Topics**
Graph Analytics: structure, traversals, analytics, PageRank, community detection, recursive queries semantic web. (9 L)

**LEARNING OUTCOMES**
The students learning outcomes are designed to specify what the students will be able to perform after completion of the course:

- **CO1.** Ability to identify the characteristics of datasets and compare the trivial data and big data for various applications.
- **CO2.** Ability to select and implement machine learning techniques and computing environment that are suitable for the applications under consideration.
- **CO3.** Ability to solve problems associated with batch learning and online learning, and the big data characteristics such as high dimensionality, dynamically growing data and in particular scalability issues.
- **CO4.** The student will learn about the graph analytics and its application.

**Course Objective:**

1. The overall goal of the advanced web technology is to make familiar students with various kind of web as well as android applications.
2. The student will learn how to form attractive web pages using ruby and rail server along with HTML and CSS.
3. The student will also learn how to make portable android applications.
4. The student will get practical experiences of these techniques by the implementation, debugging and testing in Programming language like Ruby, Rail server, Android Studio. (During the Lab).

**Detailed Syllabus**

**UNIT 1**

*Revised tour of basics:* HTML with CSS, sample codes in java script, introduction to XML with CSS, working with images, revision of mysql installation and commands. (4 L)

**UNIT 2**

*Web development and Bootstrap:* Introduction to bootstrap, history of bootstrap, responsive website, usage of bootstrap, first webpage with bootstrap Bootstrap controls – buttons, table, images, button groups, dropdown, collapse, tabs, forms etc. (10 L)

**UNIT 3**

*Ruby Introduction:* what is ruby?, brief history of ruby, ruby on rails download and installation, first program in ruby, ruby variables and data types- numbers, Boolean, strings etc., puts and print, String functions: length, reverse, upcase, downcase etc., writing comments. (15 L)

**UNIT 4**

*Ruby on rails:* introduction to rails, installation of DBMS, writing test application for database connections, starting rails web server and open application, sample website project on rails. (5 L)

**UNIT 5**

Android Application Development: introduction to android, download and installation of android studio, understand the structure of hello project, design sample app in SDK, configuration and launching of emulator, load application using mobile phone, introduction to sqllite. (6 L)

**Learning Outcome**

Having successfully completed this course, the student will demonstrate:
1. An ability to perform web applications and solve the real world problem.
2. Ability to work on live web as well as android project in MNCs.

**Course Outline**: Aptitude and Soft Skills IV is the final step of programme and the module is designed to enhance the analytical and interpersonal skills of students to make them ready to face various placements, interviews. It will also help them learn various personality development techniques by enhancing their GD and PI skills. Mock Placement Drive will test and improve students by Feedback Sharing & Error Correction.

**Course Objective**:
1. Align themselves with the placement requirements and their needs
2. Learn analytical and employability skills
3. Prepare students for job placements so that they could clear the selection process successfully and give them strategies and skills to crack GD as well as PI to get selected with decent job offers

**Course Pre/Co-requisite (if any)**:
1. Understanding grammar, number system and basic arithmetic, analytical reasoning concepts, covered in Aptitude and Soft Skills III
2. Professional profile building and Self Introduction

Course Structure & Syllabus of B.Tech – Electrical Engineering
Applicable for Batch: 2017-2021

Clauses 02 hours
Subordinate Clauses- The noun clause, the adjective clause, the adverb clause, Analysis of simple and complex sentences, prepositional phrases, transformation of sentences.

Vocabulary 01 hour
Revisiting vocabulary- high, medium and low frequency words, organization of ideas an thoughts in order to understand the text- The Pyramid Principle.

Questions 02 hours
Various test taking skills in accordance with the placement papers.

UNIT 3: LOGICAL REASONING 11 HOURS

Deductive Logic 03 hours
Premises and conclusion structure, Quality of deductive argument, Categorical arguments, Syllogism, Conditional Arguments- If..then, only if..then, If and only if , Either or.

Puzzles 02 hours
Grouping and selection, Double line up, Binary logic- truth teller-lie teller, Team formation and miscellaneous puzzles.

Set Theory and Critical Reasoning-II 03 hours
Intersection of sets, Use of venn diagrams in problem solving with two, three, four set, concept of maxima-minima through Venn diagram.

Critical reasoning II: Statement and Inference, cause and Effects, Statement and Arguments- Strengthen or Weaken the argument, Statement Assertion and Reason.

Non-Verbal Reasoning 01 hour
Mirror-image, Water-image, Spotting out the embedded figures, Completion of incomplete pattern, Figure matrix, Paper folding, Paper cutting, Grouping of identical figures, Counting figures, Non verbal series / analogies / odd man out.

Data Sufficiency 02 hours
Data Sufficiency based on logical reasoning field like Coding-Decoding / Puzzle Test / Blood Relations / Mathematical calculations / clock / calendar / etc.

UNIT 4: SOFT SKILLS 08 HOURS

Group Discussion 04 hours
Importance, Do’s & Don’ts, Personality Traits, Tips and Strategies, Types of Group Discussions.
Suggested Exercises, Games & Activities: Mock Group Discussions (on basic topics), with feedback sharing and error analysis.

Personal Interview 04 hours
Importance, Do’s & Don’ts, Personality Interview, Tips and Strategies, Etiquette Rules.
Suggested Exercises, Games & Activities: Mock Personal Interviews (contd.) with feedback sharing and error analysis.

Learning Outcomes:
By the end of this semester, students will:
1. Be prepared for the upcoming placements and they will also be ready for other competitive exams.

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Course Structure & Syllabus of B.Tech – Electrical Engineering

Applicable for Batch: 2017-2021

2. Improve their GD and PI Skills and be able to have firsthand experience of a Placement drive and gain sufficient confidence to perform well.

**Objectives of the Course**
- To introduce the basic concepts of different protection schemes,
- To introduce the basic concepts of Relays, Circuit breakers
- To introduce the basics of Arc Interruption Theory and Power System Transients.

**Unit 1**
**PROTECTIVE Relays:** Basic principles, types, Construction and characteristics of electromagnetic relays, Elements of static relays, Comparators, Basic principle of digital relays, Overcurrent, Earth fault and differential relays. 8L

**Unit 2**
**Protection Schemes:** Protection of generators, transformers, transmission line, busbar and motors 8L

**Unit 3**
**Arc Interruption Theories:** Formation and extinction of arc, properties of the arc, Restriking and recovery voltage, Methods and control devices for arc extinction, Current chopping, Resistance switching 8L

**Unit 4**
**Circuit breakers:** Oil circuit breaker, Air blast circuit breaker, SF6 circuit breaker, Vacuum circuit breaker, Circuit breaker duties and ratings, Testing and maintenance of circuit breakers, HRC and other types of fuse, Isolators 8L

**Unit 5**
**Power System Transients:** Overvoltage in the transmission lines, Fault clearance, Lightning and switching surges, Transmission, refraction and attenuation of surges. Ground wire, Sphere gaps, Lightning arrestors, BIL and insulation coordination, Grounding of power system. 8L

**Text Books:**
1. Switchgear and protection Sunil S. Rao, Khanna Publishers
3. A course in Electrical Power, C.L. Wadhawa, New Age International
4. Power system protection and switchgear, B. Ram, Wiley Eastern Ltd.

**Reference Books**
1. Power system protection & switchgear, Badriram & D.V. Vishwakarma, TMH
2. Switchgear & Protection, M.V. Deshpande, TMH

**Outcome of the Course:**
- Learn the fundamental concept of different types of protective relays.
- Apply fundamental concepts of various protection schemes.
- Use different types of circuit breakers according to their principle of operation, characteristics, ratings and their duties.
- Become familiar with arc properties, their formation and extinction.
- Become familiar with Power System Transients, Lightning arrestors, BIL and insulation coordination.

**List of Experiments**
1. To determine direct axis reactance (xd) and quadrature axis reactance (xq) of a salient pole alternator.
2. To determine negative and zero sequence reactances of an alternator.
3. To determine sub transient direct axis reactance (xd) and sub transient quadrature axis reactance (xq) of an alternator.
5. To study the IDMT over current relay and determine the time current characteristics.
6. To study percentage differential relay.
7. To study Impedance, MHO and Reactance type distance relays.
8. To determine location of fault in a cable using cable fault locator.
9. To study ferranty effect and voltage distribution in H.V. long transmission line using transmission line model.

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
10. To study operation of oil testing set.

11. To determine transmission line performance.

Simulation Based Experiments (using MATLAB or any other software)
12. To obtain steady state, transient and sub-transient short circuit currents in an alternator
13. To obtain formation of Y-bus and perform load flow analysis
14. To perform symmetrical fault analysis in a power system
15. To perform unsymmetrical fault analysis in a power system

Objectives of the Course

- To understand the fundamental theory and concepts of neural networks, Identify different neural network architectures, algorithms, applications and their limitations
- Understand appropriate learning rules for each of the architectures and learn several neural network paradigms and its applications.
- Comprehend the fuzzy logic and the concept of fuzziness involved in various systems and fuzzy set theory.
- Understand the concepts of fuzzy sets, knowledge representation using fuzzy rules, approximate reasoning, fuzzy inference systems, and fuzzy logic
- Reveal different applications of these models to solve engineering and other problem

Unit 1

Unit 2
Back propagation networks Architecture: perceptron model, single layer artificial neural networks, multilayer perceptron model; back propagation algorithm, effects of learning coefficient; factors affecting back propagation training, applications.

Unit 3

Unit 4
Fuzzy Membership Functions, Rules: Membership functions, inference in fuzzy logic, fuzzy if then rules, fuzzifications & defuzzifications, fuzzy controller.

Unit 5

Text Books:

Reference Books
1. Simon Haykins, “Neural Networks” Prentice Hall of India

Outcome of the Course:

- Comprehend the fuzzy logic and the concept of fuzziness involved in various systems and fuzzy set theory.
- Understand the concepts of fuzzy sets, knowledge representation using fuzzy rules, approximate reasoning, fuzzy inference systems, and fuzzy logic
- To understand the fundamental theory and concepts of neural networks, Identify different neural network architectures, algorithms, applications and their limitations
- Understand appropriate learning rules for each of the architectures and learn several neural network paradigms and its applications
- Reveal different applications of these models to solve engineering and other problem

List of Experiments
MATLAB based
1. Implementation of Single Layer Perceptron Model
2. Classification with a 2-Input Perceptron Model
3. Implementing and plotting a perceptron model
4. Train neural network with backpropagation
5. To Train A Two-layer Perceptron Model
6. Getting Started with Fuzzy Logic Toolbox
7. To create a custom membership function
8. To use a Gaussian membership function

Objectives of the Course

- To aim at providing programming skills from basic level onwards using MATLAB software
- To aim at using MATLAB software for data acquisition, data analysis,
- TO aim at using MATLAB software for graphical visualization, numerical analysis, algorithm development, signal processing and many other applications.

Unit 1 Basics
MATLAB environment, Variables, Basic data types, Relational and Logic operators, Conditional statements, Input and Output, Loops and branching.

Unit 2 Matrices
Creating and Manipulating matrices, Matrix maths and Matrix functions, Colon operator, Linspace, Cross product, Dot product, Logical functions, Logical indexing, 3-dimensional arrays, Cell arrays, Structures, Plotting: 2-D and 3-D plots: Basic plots, subplots, Histograms, Bar graphs, Pie charts.

Unit 3 Simulink
Introduction, Block diagram, Functions, Creating and working with models, Defining and managing signals, Running a simulation, analyzing the results.

Unit 4 M-file scripts
Creating, saving and running an M-file, Creating and running of a function, Function definition line, H1 and help text lines, Function body, Sub-functions, Nested functions, File I/O handling, M-file debugging.

Unit 5 Applications
Root finding, Data analysis, Statistical functions, Polynomials, Curve fitting, Interpolation, Ordinary differential equations, Integration and differentiation, Signal processing applications, Circuit analysis applications, Control system applications.

Text Books:
1. D Hanselman and B Littlefield, Mastering Matlab 7, Pearson Education.

Reference Books

Outcome of the Course:
- Illustrate the direct connection between the theory and real-world applications encountered in the typical engineering and technology programs.

Approved by the Academic Council at its 6th Meeting held on 13.05.2017

### Objectives of the Course
- Learn to distinguish between the various categories of power quality problems.
- Understand the root of the power quality problems in industry and their impact on performance and economics.
- Learn to apply appropriate solution techniques for power quality mitigation based on the type of problem.

**Power Quality Terms and Definitions**
- Introduction, transients, sag and swell, short duration/long duration voltage variations, voltage imbalance, waveform distortion, voltage fluctuations, power frequency variation.

**Unit 1**
- **Power Quality Problems**: Poor load power factor, loads containing harmonics, notching in load voltage, DC offset in loads, unbalanced loads, disturbance in supply voltage
- **Fundamentals of Harmonics**: Representation of harmonics, waveform, harmonic power, measures of harmonic distortion; current and voltage limits of harmonic distortion: IEEE, IEC, EN, NORSOK

**Unit 2**
- **Causes of Harmonics**: 2-pulse, 6-pulse and 12-pulse converter configurations, input current waveforms and their harmonic spectrum; Input supply harmonics of AC regulator, integral cycle control, cycloconverter, transformer, rotating machines, ARC furnace, TV and battery charger.
- **Effect of Harmonics**: Parallel and series resonance, effect of harmonics on static power plant-transmission lines, transformers, capacitor banks, rotating machines, harmonic interference with ripple control systems, power system protection, consumer equipments and communication systems, power measurement.

**Unit 3**
- **Elimination/Suppression of Harmonics**: High power factor converter, multi-pulse converters using transformer connections (Delta, polygon)
- **Passive Filters**: Types of passive filters, single tuned and high pass filters, filter design criteria, double tuned filters, damped filters and their design.
- **Active Power filters**: Compensation principle, classification of active filters by objective, systems configuration, power circuit and control strategy.
- **Shunt Active Filter**: Single phase active filter, principle of operation, expression for compensating current, concept of constant capacitor voltage control; Three phase active filter: Operation, analysis and modeling; Instantaneous reactive power theory
- **Three phase series active filters**: Principle of operation, analysis and modeling.
- **Other Techniques**: Unified power quality conditioner, voltage source and current configurations, principle of operation for sag, swell and flicker control

**Text Books**:
2. G.T. Heydt, 'Electric Power Quality', 2nd Edition. (West Lafayette, IN, Stars in a Circle Publications, 1994). (For Chapter 1, 2, 3 and 5)

**Reference Books**

### Outcome of the Course
- Understand the definition of power quality disturbances, and their causes, detrimental effects and solutions; Understand the causes of power quality problems and relate them to equipment.
- To introduce the harmonic sources, passive filters, active filters and standards.
- To know the power quality monitoring method, equipments and develop the ability to analyze the measured data
Objectives of the Course

- To Introduce The Basic Concepts Of Linear Programming
- To Educate On The Advancements In Linear Programming Techniques
- To Introduce Non-Linear Programming Techniques
- To Introduce The Interior Point Methods Of Solving Problems
- To Introduce The Dynamic Programming Method

Unit 1: LINEAR PROGRAMMING
Introduction – Formulation Of Linear Programming Model

Unit 2: ADVANCES IN LPP

Unit 3: NON LINEAR PROGRAMMING

Unit 4: INTERIOR POINT METHODS
Karmarkar’s Algorithm – Projection Scaling Method – Dual Affine Algorithm – Primal Affine Algorithm Barrier Algorithm.

Unit 5: DYNAMIC PROGRAMMING
Formulation Of Multi Stage Decision Problem – Characteristics – Concept Of Sub-Optimization And Recursion – Computational Procedure – Conversion Of Final Value Problem To Initial Value Problems

Text Books:

Reference Books

Outcome of the Course:
- To be able to solve linear optimization problems applicable to engineering based problems
- To be able to grasp the nuances of advanced techniques used in linear program programming
- To be able to classify linear and non linear system from optimization point
- To apply the optimization techniques to practical problems faced in day to day scenario.

List of Experiments
1. Study of Introduction to MATLAB
2. Study of basic matrix operations
3. To solve linear equation
4. Solution of Linear equations for Underdetermined and Over determined cases.
5. Determination of Eigen values and Eigen vectors of a Square matrix.
7. Solution of Difference Equations using Euler Method.
11. Determination of polynomial fit, analyzing residuals, exponential fit and error bounds from the given data.

Subject Category: Electives
Year: 4th
Semester: VII

Objectives of the Course

- To introduce the basic concepts of dc electric drives and ac electric drives
- To understand dc and ac electric drives closed-loop operation
- To understand dc and ac electric drives operation including microprocessor based arrangements.

Fundamentals of Electric Drive: Electric Drives and its parts, advantages of electric drives, classification of electric drives; Speed-torque conventions and multi-quadrant operations; Types of load, Load torque: components, nature and classification

Dynamics of Electric Drive: Dynamics of motor-load combination; Steady state stability of Electric Drive; Load equalization

Selection of Motor Power rating: Thermal model of motor for heating and cooling, classes of motor duty, determination of motor power rating for continuous duty, short time duty and intermittent duty.

Electric Braking: Purpose and types of electric braking, braking of dc, three phase induction and synchronous motors

Dynamics During Starting and Braking: Calculation of acceleration time and energy loss during starting of dc shunt and three phase induction motors, methods of reducing energy loss during starting; Energy relations during braking, dynamics during braking

Special Drives: Switched Reluctance motor

Power Electronic Control of DC Drives: Single phase and three phase controlled converter fed separately excited dc motor drives (continuous conduction only); dual converter fed separately excited dc motor drive; rectifier control of dc series motor; Chopper control of separately excited dc motor and dc series motor.

Power Electronic Control of AC Drives:

Three Phase induction Motor Drive: Static Voltage control scheme, static frequency control scheme (VSI, CSI, and cyclo – converterbased) static rotor resistance and slip power recovery control schemes.

Text Books:

Reference Books

Outcome of the Course:

- Apply the knowledge of drives and use them effectively.
- Suggest the particular type of AC drive system for an application.
- Suggest the particular type of DC drives system for an application.
List of Experiments

Hardware Based Experiments:
1. To study speed control of separately excited dc motor by varying armature voltage using single-phase fully controlled bridge convertor.
2. To study speed control of separately excited dc motor by varying armature voltage using single-phase half controlled bridge convertor.
3. To study speed control of separately excited dc motor using single-phase dual converter (Static Ward-Leonard Control)
4. To study speed control of separately excited dc motor using MOSFET/IGBT chopper.
5. To study closed loop control of separately excited dc motor.
6. To study speed control of single-phase induction motor using single-phase ac voltage controller.
7. To study speed control of three-phase induction motor using three-phase ac voltage controller.
8. To study speed control of three-phase induction motor using three-phase current source inverter.
10. To study speed control of three-phase slip ring induction motor using static rotor resistance control using rectifier and chopper.
11. To study speed control of three-phase slip ring induction motor using static Scherbius slip power recovery control scheme.

Simulation Based Experiments (using MATLAB or any other software)
1. To study starting transient response of separately excited dc motor.
2. To study speed control of separately excited dc motor using single phase fully/half controlled bridge convertor in discontinuous and continuous current modes.
3. To study speed control of separately excited dc motor using chopper control in motoring and braking modes.
4. To study starting transient response of three phase induction motor.

OBJECTIVES:

- To understand the concept of microcontroller based system.
- To enable design and programming of microcontroller based system.
- To know about the interfacing circuits.

UNIT I: INTRODUCTION:
Introduction, Comparison of microprocessor and microcontroller, evolution of microcontrollers from 4 bit to 32 bit, development tools for microcontrollers: Concept of IDE, Editor, Assembler, Compiler, Linker, Simulator, Debugger and assembler directives

UNIT II: MICROCONTROLLER 8051:
Block Diagram, Pin diagram and Pin Functions, General Purpose and Special Function Registers, Oscillator and clock circuit, Reset circuit, I/O Port circuits, Memory organization, Internal program and data memory.

UNIT III: ADDRESSING MODES, INSTRUCTION SET OF 8051:
Addressing modes and accessing memory using various addressing modes, instruction set: Arithmetic, Logical, Simple bit, jump, loop and call instructions and their usage. Time delay generation and calculation, Timer/Counter programming.

UNIT IV: ASSEMBLY LANGUAGE PROGRAMMING:

UNIT V: INTERFACING AND APPLICATION OF MICROCONTROLLER:
Interfacing of PPI 8255, DAC (0804), Temperature measurement (LM35), interfacing seven segment displays, displaying information on a LCD, stepper motor interfacing, DC motor interfacing and PWM, Interfacing a 4 X 4 matrix Keypad, Generation of different types of waveforms using DAC.

Text Books:

Reference Books:

OUTCOMES OF THE COURSE:
The course provides an understanding of:
- Micro-controller and its applications.
- Interfacing of Microcontroller.
Course Structure & Syllabus of B.Tech – Electrical Engineering
Applicable for Batch: 2017-2021

List of Experiments:

I. PROGRAMMING
2. Arithmetic Instructions - Addition/subtraction, multiplication and division.
3. Boolean & Logical Instructions (Bit manipulations).
5. Programs to generate delay using on-Chip timer /Counter.

II. INTERFACING
Write Assembly programs to interface 8051 chip to Interfacing modules.
1. Familiarization with KEIL, PROTEUS simulator and trainer kit.
2. Read Push-button switch and display its status on LED.
3. Interfacing 7-Segment LED Display with 8051 microcontroller.
4. Interfacing of 16x2 LCD with 8051 microcontroller and display message on it.
5. Interface 4x4 matrix keyboard with 8051 microcontroller. Display value of pressed switch on LCD.
6. Stepper and DC motor control interface to 8051 microcontroller.

List of Two Value Added Experiments:
1. External ADC and Temperature control interface to 8051 microcontroller.
2. Generate different waveforms Sine, Square, Triangular, Ramp etc. using DAC interface to 8051; change the frequency and amplitude.
3. Simple Calculator using 6 digit seven segment displays and Hex Keyboard interface to 8051.

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
OBJECTIVES: To provide the foundations for AI problem solving techniques and knowledge representation formalisms.

Unit-1 (6 L)
Introduction- Definitions, Intelligent Agents, Problem solving and Search- Uninformed Search, Informed Search, MiniMax Search, Constraint Satisfaction Problem.

Unit-2 (6 L)
Prolog- Introduction to Prolog, Syntax and Meanings of Prolog Programs, Operators and Arithmetic, Prolog for Artificial Intelligence.

Unit-3 (8 L)
Knowledge Representation- Introduction, Approaches and Issues in Knowledge Representation, Propositional Logic and Inference, First-Order Logic and Inference, Unification and Resolution.

Unit-4 (8 L)

Unit-5 (8 L)
Planning and Learning- Introduction to Planning, Types- Conditional, Continuous, Multi-Agent. Introduction to Learning, Categories of Learning, Inductive Learning, Reinforcement Learning, Decision Tree Learning, Basic Introduction to Neural Net Learning.

LEARNING OUTCOMES
CO1. Ability to identify and formulate appropriate AI methods for solving a problem
CO2. Ability to implement AI algorithms
CO3. Ability to compare different AI algorithms in terms of design issues, computational complexity, and assumptions
CO4. Student will be able to use the concepts of AI for real world problem solving.

OBJECTIVES:
Students undergoing this course are expected to learn fundamentals and advanced concepts of cryptography and its application to network security, security services, and firewalls & threats.

Unit I: (6 L)
Introduction to security attacks, services and mechanism, introduction to cryptography.

Conventional Encryption: Conventional encryption model, classical encryption techniques—substitution ciphers and transposition ciphers, cryptanalysis, steganography, stream and block ciphers.

Modern Block Ciphers: Block ciphers principals, Shannon’s theory of confusion and diffusion, fiestal structure, data encryption standard (DES), strength of DES, differential and linear crypt analysis of DES, block cipher modes of operations, triple DES, confidentiality using conventional encryption, traffic confidentiality, key distribution

Unit II: (8 L)
Introduction to prime and relative prime numbers, finite field of the form GF(p), modular arithmetic, Fermat’s and Euler’s theorem, primarily testing, Euclid’s Algorithm, Chinese Remainder theorem, Principals of public key crypto systems, RSA algorithm, security of RSA, key management, Diffie-Hellman key exchange algorithm, introductory idea of Elliptic curve cryptography, Elgamel encryption.

Unit III: (8 L)

Unit IV: (7 L)
Authentication Applications: Kerberos and X.509, directory authentication service, electronic mail security—pretty good privacy (PGP), S/MIME.

Unit V: (8 L)

System Security: Intruders, Viruses and related threads, firewall design principals, trusted systems.

LEARNING OUTCOMES
After completing the course the students have knowledge
- Co1. To compare various Cryptographic Techniques
- Co2. Demonstrate various data encryption techniques
- Co3. Explain the various Security Application
- Co4. Students will learn about use and application of cryptography on networks.

Text Book:

Reference Book:

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Course Objective:

1. Understand basic concepts in pattern recognition
2. Gain knowledge about state-of-the-art algorithms used in pattern recognition research
3. Understand pattern recognition theories, such as Bayes classifier, linear discriminant analysis.
4. Apply pattern recognition techniques in practical problems.

Course Pre/Co-requisite (if any): Basics of Machine Learning, concept of statistics

Detailed Syllabus

UNIT 1
Linear Algebra: Scalars, Vectors, Matrices and Tensors, Multiplying Matrices and Vectors, Identity and Inverse Matrices, Linear Dependence and Span, Norms, Special Kinds of Matrices, Vectors, Eigen decomposition, Singular Value Decomposition, Example: Principal Components Analysis

(8 L)

UNIT 2

(5 L)

UNIT 3

(9 L)

UNIT 4

(6 L)

UNIT 5
Linear Factor Models, Probabilistic PCA and Factor Analysis, Independent Component Analysis (ICA), Monte Carlo Methods, The Log-Likelihood Gradient.

(7 L)
Course Structure & Syllabus of B.Tech – Electrical Engineering

Applicable for Batch: 2017-2021

Learning Outcome

At the end of the course Learning Outcomes Having successfully completed this course, the student will demonstrate:

1. Ability to apply knowledge of advanced principals to the analysis of electrical and computer engineering problems.
2. Ability to apply knowledge of advanced techniques to the design of electrical and computer engineering systems.
3. Ability to use the appropriate state-of-the art engineering references and resources, including IEEE research journals and industry publications, needed to find the best solutions to electrical and computer engineering problems

Text Book:

Reference Book:
1. Stephen H. Kan, Metrics and Models in Software Quality Engineering, Addison-Wesley Professional

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Course Objective:

1. The objective of the course is to make the students understand the different techniques for efficient mining of the data.
2. To introduce students to the concepts, processes and practice of Inference Rules at different abstraction levels of Data.
3. To provide an understanding of the Data management perspective regarding the use of business intelligence (BI), Data Mining systems and Advanced Applications.

Detailed Syllabus

UNIT 1

Data Science: Introduction to Data Science, Overview, Motivation, Data Mining-Definition & Functionalities.
Data Warehousing: Overview, Definition, Delivery Process, Difference between Database System and Data Warehouse, Multi-Dimensional Data Model, Data Cubes, Stars, Snow Flakes, Fact Constellations, Concept hierarchy, Process Architecture, 3 Tier Architecture, Data Marting. (12L)

UNIT 2

Data Pre-Processing: Data Cleaning: Missing Values, Noisy Data, (Binning, Clustering, Regression, Inconsistent Data, Data Integration and Transformation.
Data Reduction: Data Cube Aggregation, Dimensionality reduction, Data Compression, Numerosity Reduction, Clustering, Discretization and Concept hierarchy generation.
Data objects and attribute types, Measuring Data Similarity and Dissimilarity, Cosine Similarity. (7 L)

UNIT 3

Concept Description: Definition, Data Generalization, Analysis of attribute relevance, Mining Class comparisons, Statistical measures in large Databases. Measuring Central Tendency, Box Plots, Measuring Dispersion of Data, Apriori Algorithm, Mining Multilevel Association rules from Transaction Databases, FP-growth algorithm. (7 L)

UNIT 4

Classification: What is Classification, Issues regarding Classification, Attribute selection measures, Information Gain, Gain Ratio, Gini Index, Decision tree, Naïve Bayesian Classification, Metrics for evaluating classifier performance, Confusion matrix. (6 L)

UNIT 5

Cluster Analysis: Data types in cluster analysis, Overview of basic clustering methods, Partitioning methods: K-Means and K-medoids technique, Hierarchical Clustering: Agglomerative and Divisive, Density Based Methods: DBSCAN and OPTICS, Grid Based Methods: STING and CLIQUE, Outlier Analysis. (8 L)

Learning Outcome

The course provides the students the ability to:

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
1 - Undertake systematic investigation/research related to the Data mining Concepts
2- Understand advanced Database systems and technologies for today’s dynamic business environment.

LTP 3 0 0
Credit 3
Subject Category DE/OE
Year 4th
Semester VII

Course Objective:
1. To make students learn about basic understanding of the multimedia objects and tools for object generation.
2. To teach students audio and video file formats used now days as a part of IT generation.
3. To make students learn clear understanding of multimedia projects.
4. To make students learn different compression techniques.

Detailed Syllabus

UNIT 1

Introduction: Introduction to Multimedia, Multimedia Information, Multimedia Objects, Multimedia in business and work, Stages of Multimedia Projects, presentation tools, tools for object generations, video, sound, image capturing, authoring tools, card and page based authoring tools (8 L)

UNIT 2

Multimedia Building Blocks: Text, Sound MIDI, Digital Audio, audio file formats, MIDI under windows environment Audio & Video Capture. (8 L)

UNIT 3

Data Compression: Introduction to data compression, Compression ratio, loss less & lossy compression, Huffman Coding, Shannon Fano Algorithm, Huffman Algorithms, Adaptive Coding, Arithmetic Coding, Finite Context Modelling, Dictionary based Compression, Sliding Window Compression, LZ77, LZ78, LZW compression. (8 L)

UNIT 4

Image, Audio and Video Compression: Digital Audio concepts, Sampling Variables, Loss less compression of sound, loss compression & silence compression, lossy graphic compression, image file format, animations Images standards, JPEG Compression, Zigzag Coding, Multimedia Database. Content based retrieval for text and images, Video Compression, MPEG standards, MHEG Standard Video Streaming on net. (8 L)

UNIT 5

Advanced forms of interaction in Multimedia: Video Conferencing, Elements of (immersive/non-immersive) Virtual Reality, Augmented Reality, Tele presence, Mobile technologies.

Learning Outcome
At the end of the course, Learning Outcomes Having successfully completed this course, the student will demonstrate:
1. Students will understand various multimedia tools available.
2. Students will be able to learn with Multimedia projects

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
3. Students can differentiate between lossy and lossless compression.

Objectives of the Course: The students will learn

- Consumer Electronics and its application
- Concept of audio and video related system.
- Concepts of recording and power supplies.

UNIT-I
Audio Systems: Microphones, Loudspeakers, Speaker baffle and enclosure, Acoustics, Mono, Stereo, Quad, Amplifying Systems, Equalisers and Mixers, Electronic Music Synthesisers, Commercial Sound, Theater Sound System

UNIT – II
Video Systems and Displays: Monochrome TV, Colour TV standards and systems, TFT, Plasma, HDTV, Digital TV, Video Telephone and Video Conferencing

UNIT III:
Domestic Appliances: Washing machines, Microwave ovens, Air-conditioners and Refrigerators, In car computers Office Systems: FAX, Xerox, Telephone Switching System, Mobile Radio System

UNIT IV:
Recording and Reproduction Systems: Disc recording and reproduction, Magnetic recording and reproduction, Video tape recording and reproduction, Video disc recording and play back, Distortion and Noise reduction in Audio and Video System

UNIT-V
Power Supplies and other systems: SMPS, UPS and Preventive Maintenance, Set Top Boxes, Remote controls, Bar codes, ATM

Text Books:

OUTCOMES OF THE COURSE:
The course provides an understanding of:

- Electronic systems related to consumer applications.
- Principle of working of various home appliances.
- Skills to use modern consumer electronics systems used in day to day life.
**Course Structure & Syllabus of B.Tech – Electrical Engineering**

**Applicable for Batch: 2017-2021**

**Objectives of the Course:** To teach the fundamental concepts of various electronic devices, circuits and their application. To develop ability among students for problem formulation, system design and solving skills.

**UNIT-I**

Semiconductor materials and properties Group-IV materials, Covalent bond, electron-hole concepts Basic concepts of energy bands in materials, concepts of forbidden gap Intrinsic and extrinsic semiconductors, donors and acceptors impurities

**UNIT-II**

Junction diode and diode applications p-n junction, depletion layer, v- i characteristics, diode resistance, capacitance diode ratings (average current, repetitive peak current, non-repetitive current, peak-inverse voltage).

Diode Applications Rectifiers (half wave and full wave), filter (C– filter), clipping circuits, clamping circuits, voltage multipliers

**UNIT-III**

Breakdown diodes Breakdown mechanisms (zener and avalanche), breakdown characteristics, zener diode application as shunt regulator

**UNIT-IV**

Bipolar Junction Transistor Basic construction, transistor action, CB, CE and CC configurations, input/output Characteristics, Transistor Amplifier Graphical analysis of CE amplifier, concept of voltage gain, current gain.

**UNIT-V**

Field Effect Transistor

JFET: Basic construction, transistor action, concept of pinch off, maximum drain saturation current, input and transfer characteristics, characteristics equation CG, CS and CD configurations, MOSFFFT: depletion and enhancement type MOSFET-construction, operation and characteristics.

**Reference Books:**

Course Structure & Syllabus of B.Tech – Electrical Engineering
Applicable for Batch: 2017-2021

OUTCOME OF THE COURSE:
- Students will be able to build, develop, model, and analyze the electronic circuits along with learning the device ratings and characteristics
- Students will be able to design and analyse electronic circuits

List of Experiments:
1. To study V-I characteristics of p-n junction diode.
2. To study V-I characteristics of zener diode.
3. To study half-wave rectifier and calculate ripple factor and efficiency.
4. To study full-wave rectifier and calculate ripple factor and efficiency.
5. To study clipper circuits.
6. To study clamper circuits.
7. To study the input and output characteristics of CB and CE transistor.
8. To study drain and transfer characteristics of JFET.

Course Objective: To enable the students, know and understand the mechanical behavior of composite materials

Course Pre/Co-requisite (if any): Strength of Materials, Materials Engineering

Detailed Syllabus

UNIT 1:
Definition and applications of composite materials, classifications, Fibers- glass, carbon, ceramic and aramid fibers. Matrices- polymer, graphite, ceramic and metal matrices; characteristics of fibers and matrices. Fillers and whiskers. Advantages and limitations of composites

UNIT 2:
Mechanical behaviour of composite materials, surface treatment of fibers, thermosets matrix materials, Thermoplastics and other matrix materials, Manufacturing of thermoset composites, bag moulding, compression moulding, pultrusion, filament welding, other manufacturing processes

UNIT 3:

UNIT 4:
Analysis of laminated composites, symmetric laminates, angle ply laminates, cross ply laminates, laminate, evaluation of lamina properties, determination of stress and strain in laminate, maximum stress and strain criteria, von Mises Yield criterion for isotropic materials

UNIT 5:
Residual stresses during curing, prediction of laminate failure, thermal analysis of composite laminates. Analysis of laminated plates - equilibrium equations of motion, static bending analysis, buckling analysis, free vibrations, natural frequencies

Learning Outcome

At the end of the course the student can:
CO1: Have an overview of the mechanical behaviour and application of composite materials.
CO2: Get an overview of the methods of manufacturing composite materials
CO3: Students will understand various mechanics of composite materials.

Course Objective: To facilitate the understanding of total quality management principles and processes.

Course Pre/Co-requisite (if any): Manufacturing Process, Industrial Engineering and Management

Detailed Syllabus

UNIT 1:
Introduction, need for quality, evolution of quality; Definitions of quality, product quality and service quality; Basic concepts of TQM, TQM framework, contributions of Deming, Juran and Crosby. Barriers to TQM; Quality statements, customer focus, customer orientation & satisfaction, customer complaints, customer retention; costs to quality.

UNIT 2:
TQM principles; leadership, strategic quality planning; Quality councils- employee involvement, motivation; Empowerment; Team and Teamwork; Quality circles, recognition and reward, performance appraisal; Continuous process improvement; PDCE cycle, 5S, Kaizen; Supplier partnership, Partnering, Supplier rating & selection.

UNIT 3:
The seven traditional tools of quality; New management tools; Six sigma- concepts, methodology, applications to manufacturing, service sector including IT, Benchmarking process; FMEA- stages, types.

UNIT 4:
TQM tools and techniques, control charts, process capability, concepts of six sigma, Quality Function Development (QFD), Taguchi quality loss function; TPM- concepts, improvement needs, performance measures.

UNIT 5:
Quality systems, need for ISO 9000, ISO 9001-9008; Quality system- elements, documentation, Quality auditing, QS 9000, ISO 14000- concepts, requirements and benefits; TQM implementation in manufacturing and service sectors.

Learning Outcome

At the end of the course the student can:
CO1: To facilitate the understanding of total quality management principles and processes.
CO2: Student will learn about ISO systems
CO3: Student will learn about various quality tools to improve products quality.

REFERENCES [RB]:

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
1. Course Summary
This course will introduce students to classification of fuel and their properties. In this course, students unable to understand coal preparation, coal storage process, coal gasification process. This course also covers various topics which includes Fischer Tropsch Synthesis, Gaseous and liquid fuels i.e. natural gas, producer gas, water gas, coal gas, biogas, LPG, kerosene, diesel. Students will also learn combustion mechanism for solid, liquid and gaseous fuel.

2. Course Objectives
The students should be able to:
1. Understand different types of fuel, basic terms in fuels and combustion
2. Understand the coal preparation and conversion of coal into suitable products using gasification and Fishers Tropsch Synthesis process.
3. Understand physical and chemical properties of different types of fuel and their storage techniques, combustion mechanism
4. 

3. Course Outcomes
A good knowledge of this course will enable students to:
1. Understand origin of different of types of fuel and their properties and classification
2. Understand the Coal preparation and storage techniques, Physical and chemical properties of coal, Briquetting and liquefaction of solid fuels
3. Understand the conversion of coal into useful products using gasification techniques and Fischer Tropsch Synthesis
4. Understand about gaseous and liquid fuels, their physical and chemical properties and Testing methods for these fuels
5. Understand about combustion mechanism for different types of fuels and Furnace elements.

4. Curriculum Content
UNIT 1

UNIT 2
Coal Preparation, Coal Storage, Coal Carbonization and by-product Recovery. Physical and Chemical, Properties of Coke, Briquetting of Solid Fuels. Liquefaction of Solid Fuels

UNIT 3
UNIT 4

UNIT 5

1. Course Summary
The course will introduce students to the need and scope of health, safety and environment in industry. The students will learn about the sources and causes of pollution, effects of the pollutants on livings and environment, and the safety and remedial measures that should be adopted to reduce the pollution.

2. Course Objectives
The students should be able to:
1. Understand the sources of pollutions.
2. Understand the effects of pollutions on health and environment.
3. Understand the remedial measures and safety precautions associated with each source of pollution.

3. Course Outcomes
On successful completion of the course, students have the understanding of the following:
1. Understand the scope of HSE in industry.
2. Understand the sources, effects and remedies of air pollution.
3. Understand the sources, effects and remedies of water pollution.
4. Understand the sources, effects and remedies of liquid and solid wastes.
5. Understand the sources, effects and remedies of noise pollution.

4. Curriculum Content
UNIT 1
Introduction: Man And Environment: Overview (Socio-Economic Structure & Occupational Exposures); Scope Of Environmental Engineering; Pollution Problems Due To Urbanization & Industrialization.

UNIT 2
Air Pollution : Causes Of Air Pollution; Types & Sources Of Air Pollutants; Climatic & Meteorological Effect On Air Pollution Concentration; Formation Of Smog And Fumigation; Analysis Of Air Pollutants Collection Of Gaseous Air Pollutants; Collection Of Particulate Pollutants; Analysis Of Air Pollutants Like : Sulphur Dioxide, Nitrogen Oxide, Carbon Monoxide, Oxidants &Ozone; Hydrocarbons; Particulate Matter; Control Of Particulate Emission- Control Of Gaseous Emission; Flue Gas Treatment Methods : Stacks Gravitational And Inertial Separation; Settling Chambers; Dynamic Separators; Cyclone; Filtration; Liquid Scrubbing; Spray Chambers; Packed Towers; Orifice And Venturi Scrubbers; Electrostatic Precipitators.

UNIT 3
Water Pollution & Its Control - Origin Of Waste Water – Types Of Water Pollutants And Their Effects ; Adverse Effects On: Human Health & Environment; Aquatic Life; Animal Life; Plant Life; Water Pollution Measurement Techniques; Water Pollution Control Equipments& Instruments; Indian Standards For Water Pollution Control.

UNIT 4
Liquid & Solid Wastes – Domestic & Industrial Wastes; Pesticides; Toxic: Inorganic & Organic Pollutants; Soil Deterioration; Ground Water Pollution; Concentration Of Infecting Agents In Soil; Solid Waste Disposal; Dumping Domestic & Industrial Solid Wastes; Advantages & Disadvantages; Incineration- Advantages & Disadvantages – Sanitary Land Field: Advantages & Disadvantages; Management Of Careful & Sanitary Disposal Of Solid Wastes.

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
UNIT 5
Noise Pollution & Control: Intensity; Duration; Types Of Industrial Noise; Ill Effects Of Noise; Noise Measuring & Control; Permissible Noise Limits.

Text book [TB]:
1. J. Turk & A. Turk, “Environmental Science Environmental Pollution”.

5. Teaching and Learning Strategy
All materials (ppts, assignments, labs, etc.) will be uploaded in Moodle. Refer to your course in Moodle for details.
OBJECTIVE: The objective of this subject is to give the basic knowledge of descriptive and mathematical part of statistics. Applications of various probability distribution in the field of insurance and finance. The course will focus on the different situations in the field of actuarial science which can be dealt with transformation of variables. The course will make able the students to understand the association between two random quantities and to find their mathematical measure.

Unit I

Unit II
Bivariate data: Definition, scatter diagram, simple, partial and multiple correlation, rank correlation. Simple linear regression.

Unit III
Principle of least squares and fitting of polynomials and exponential curves. Theory of attributes Independence and association of attributes, consistency of data, measures of association and contingency, Yule’s coefficient of colligation.

Unit IV
Testing of hypothesis: Z-test, t-test, F-test, Chi-square test for goodness of fit, Introduction to analysis of variance.

LEARNING OUTCOME: Students will able to:
- Analyze given statistical data.
- Have confidence to deal with real life situation, especially, in insurance and finance.
- Understand applications of standard probability distributions in every span of life.
- Find the association between two random quantities using mathematical theory.

Text Books:

Reference Books:
Course Objective:
To introduce the various aspects of graphics design and important stages of product design and development.

Unit 1: Introduction

Unit 2: Product Design Cycle
Stages of product development. Introduction to ergonomics

Unit 3: Design Process
Introduction to concept. Concept development. Role of sketching in concept development. Implementation stages of concept for product development

Unit 4: Technology & Market Assessment
Customer needs identification, Market research essentials. Advertising and marketing tools.

Unit 5: Design Tools
Introduction to various design tools.

LEARNING OUTCOME:
1. The student will be able to understand the importance of Graphics.
2. The student will be able to understand and demonstrate their ideas visually.
3. The student will be able to understand the various stages of product development.

Text Books:
1. The Elements of Graphic Design, Alex W. White
2. The Design of Everyday Things, Don Norman

COURSE OBJECTIVE:
To understand the basic concepts Entrepreneurship and start up. To understand role and importance of entrepreneurship for economic development. To develop personal creativity and entrepreneurial initiative or start up.

COURSE OUTCOME
At the end of the course the student can:
CO1: Analyse the business environment in order to identify start up opportunities
CO2: Identify the elements of success of entrepreneurial ventures
CO3: Consider the legal and financial conditions for starting a start up
CO4: Evaluate the effectiveness of different entrepreneurial strategies

Unit 1: 4Hrs.

Unit 2: 6Hrs.

Unit 3: 5Hrs.

Unit 4: 5Hrs.

Course Objective
- To promote an integral and holistic growth of young minds
- Develop a broad understanding of Indian society and intercultural literacy through cultural immersion.
- Deepen your knowledge of Indian development, environmental, and cultural issues through coursework, local engagement, and independent projects.

Unit 1 Indian Culture: An Introduction
8Hrs.
Characteristics of Indian culture, Significance of Geography on Indian Culture; Society in India through ages- Ancient period- Varna and Caste, family and marriage in India, position of women in ancient India, Contemporary period; caste system and communalism.

Unit 2 Indian Languages and Literature
6 Hrs.

Unit 3 Brief History of Indian Arts and Architecture
6Hrs.

Unit 4 Spread of Indian Culture Abroad
6Hrs.
Causes, Significance and Modes of Cultural Exchange - Through Traders, Teachers, Emissaries, Missionaries and Gypsies, Indian Culture in South East Asia, India, Central Asia and Western World through ages

COURSE OUTCOME:
- Understand background of our religion, customs institutions, administration and so on.
- Understand the present existing social, political, religious and economic conditions of the people.
- Analyze relationship between the past and the present relevance of Indian tradition.
- Develop practical skills helpful in the study and understanding of historical events.

TEXT BOOKS
5. Christie, J.W., 1995, State formation In early Maritime Southeast Asia, BTLV
Course Objective

- Develop an understanding of Indian philosophical systems
- To empower for self-exploration

Unit 1 Introduction
Meaning of Philosophy, Origin of Philosophy in India, Major Indian philosophical systems: Sankhya: Metaphysics, Theory of causation, Prakriti, Purusha, Evolution, Yoga: Concept of Chitta, Types and Modification of Chitta, Eight-fold Yoga & Vedant: Notions of Maya & Brahma

Unit 2 Major Principles
Panchkosha, Triguna, Tridosh, Macrocosm-Microcosm

Unit 3 Major Contemporary Indian Philosophers

Unit 4 Activities & Projects
Identifying human prakriti, Using Trigun inventory, Understanding self

COURSE OUTCOME:
- Students will acquire understanding of concepts of Indian philosophy.
- Students will be enabled to analyze their self.
- The students will be able to relate some of the core concepts and theories of modern Indian philosophy to concepts and ideas in classical Indian philosophy.
- The students will be able to appreciate how philosophical approaches may be integrated more practically as a "way of life".

</table>

Course Objective
- The course attempts to analyze the structure and process of industrial organizations from the sociological perspective.
- The course enables students to have a general view of modern industry.

Unit 1 7Hrs.

Unit 2 7Hrs.
Industrial Disputes: Concept, Features and Kinds of disputes, Settling disputes, Mediation, Arbitration, Conciliation, Negotiation, The Indian Worker: Features of Indian worker, the contribution of social - Philosophy, family, caste and community in determining the attitude of workers

Unit 3 6Hrs.
Trade Union: Concept, Features, Functions and Types, History of Trade Union Movement in India Trade Unions and Challenges of Privatization and Globalization; Law and work, Decline of Trade Unions.

Unit 4 6Hrs.
Dynamics of Industrial Relations: Corporate Social Responsibility, Inclusion of Women in the Corporate Sector, Scope of Industrial Sociology in India; Impact on Employment, Impact on HRD, impact on wages and benefits, Modern Industry in India

COURSE OUTCOME:
- It will enable students to demonstrate the different human components that make up modern industry.
- The student will get exposed to a specialized area of sociology and its insights.
- Apply sociological concepts and theories to understand contemporary social issues and/or public debates about these issues
- Communicate sociological concepts and/or research in a manner that is appropriate for the intended audience (e.g., academic, lay audience)

Course Objective

- To provide the overview of sustainable and its needs to the students.
- To provide the importance and components of sustainable development to the students.
- To provide the association of social and economic development to the students.

**Unit 1 Overview of Sustainable Development**

History and emergence of the concept of Sustainable Development, Components of SD i.e. Economic, Social, Human, Institutional, Technological and Environmental development; Definitions, Sustainability in Ecosystem Services; natural resource degradation, greenhouse gases, factors affecting SD (i.e. Industrialization, urbanization, population growth, globalization, etc.)

**Unit 2 Policies on Sustainable Development at international level**

Government Policies for SD in India; Socio-economic policies for sustainable development in India, Sustainable development through trade, Carrying Capacity, global policies for sustainable development

**Unit 3 Sustainable Development and International Contribution**

SDGs and MDGs, Complexity of growth and equity, International Summits, Conventions, Agreements, Initiations of international organizations like WHO, UNDP, WTO, FAO and World Bank towards sustainable development

**Unit 4 Measurement of Sustainable Development**

Role of developed and developing countries in the sustainable development, Demographic dynamics and sustainability, integrated approach for resource protection and management; Index based estimation of SD i.e. Environmental Sustainable Development Index and sustainable development, and other index

Course Outcome:

- The students will be able to understand the importance of natural resource in economic development.
- The students contribute significant efforts towards sustainable development
- Develop a future-oriented perspective that highlights the significance of their decisions, choices and actions on the quality of life of present and future generations.
- Understand and are empowered to address the real causes and consequences of unsustainable behaviour within the context of an interdependent and globalised world.

Objectives of the Course
- To have knowledge about methods used for modeling of network and methods used for its analysis
- To study about methods used for short circuit analysis of a power system
- To study techniques used for forecasting of load both long term and short term

Short Circuit Analysis: - SCA of multi node system using bus impedance matrix, Z-bus building algorithm, asymmetrical fault analysis using Z-bus, development of voltage and current equations under asymmetrical fault using symmetrical components.

Load Forecasting Techniques:- Methods of Load Forecasting
Contingency Analysis:- Power systems State estimation and various techniques like LSET & WLSET, The line power flow state estimation.

Computer Control of Power System:- Need of real time and computer control of power system, Operating states of power system, SCADA & Energy Management Centers, Smart Grid.

Text Books:

Reference Books

Outcome of the Course:
- A student is able to model a power system network and analyze it using different analysis methods
- A student is able to do short circuit analysis of a power system
- A student is able to do short circuit analysis and able to do load forecast both long term and short term

List of Experiments
1. To plot the daily load curve for the given data using MATLAB
2. Introduction to basics of Electrical Transients Analyser Program (ETAP)
3. Evaluate the value of voltages for a 4 bus system using node equations in MATLAB
4. Modeling and Load flow analysis of 5 bus system
5. Bus elimination of a 4 bus system using MATLAB
6. Application of Gauss-Siedel and Newton-Raphson method for load flow studies on a three bus system using MATLAB
7. Analysis of fault for a multibus system using bus impedance matrix
8. Load flow analysis using Gauss-Siedel and Newton-Raphson method for 5 bus system

Objectives of the Course

- The objectives of the course are to make the student understand the concept of reliability,
- To make the student understand about energy policy, demand side management,
- To make the student understand about power exchange, trading arrangements and different pricing structure

Unit 1

**General:** Electricity demand operation and reliability, energy policy and cost, competitive market for generation, role of the existing power industry, renewable generation technologies, distributed generation, traditional central utility model, independent system operator (ISO), retail electric providers.

Unit 2

**Electricity Market and Management:** Wholesale electricity markets, characteristics, bidding market clearing and pricing, ISO models, market power evaluation, demand side management, distribution planning.

Unit 3

**Power Pool:** Role of the transmission provider, multilateral transaction model, power exchange and ISO- functions and responsibilities, classification of ISO types, trading arrangements, power pool, pool and bilateral contracts, multilateral traders.

Unit 4

**Electricity Pricing-I:** Transmission pricing in open access system, rolled in pricing methods, marginal pricing methods, zonal pricing, embedded cost recovery, open transmission system operation and congestion management in open access transmission systems in normal operation.

Unit 5

**Electricity Pricing-II:** Predicting electricity costs, electricity cost derivation, electricity pricing of inter provincial power market, transmission policy.

Text Books:

Reference Books

Outcome of the Course:

- Use various models for electrical supply such as central pool model, independent model etc.
- Use benefits of deregulation for efficient energy management.
- Converse with the concept of power exchanges for trading arrangement.
- Converse with different pricing methods for various conditions.

Objectives of the Course

- To provide students the knowledge of optimization techniques used in the power system and Load Frequency Control (LFC).
- To provide a solid foundation in mathematical and engineering fundamentals required to control the governing system in Turbine models.
- To provide the knowledge of Hydrothermal scheduling, reactive power control.

**Introduction:** Structure of power system, power system control center, level decomposition in power system, power system security, various operational stages of power system, power system voltage stability, introduction to SCADA

**Unit 1**

**ECONOMIC operation:** Concept and problems of unit commitment, input output characteristics of thermal and hydroplants, system constraints, Optimal operation of thermal units without and with transmission losses, penalty factor, incremental transmission loss, transmission loss formula (without derivation), hydrothermal scheduling long and short terms, concept of optimal power flow

**Load frequency control:** Concept of load frequency control, load frequency control of signal area system: turbine speed governing system and modelling, block diagram representation of single area system, steady state analysis, dynamic response control area concept, P-I control, load frequency Control and economic dispatch control. Load frequency control of two area system tie line power modelling, block diagram representation of two area system.

**Unit 2**

**AUTOMATIC voltage control:** Schematic diagram and block diagram representation, Different type of excitation system & their controllers. Concept of voltage control, methods of voltage control, control by tap changing transformer. Shunt compensation, series compensation, phase angle compensation

**Unit 3**

**Fact Devices:** Concept and objectives of facts controllers, Introduction to different FACT controllers like TCR, FC-TCR, TSC, SVC, STATCOM, TSSC, TCSC, SSSC, TC-PAR, UPFC

**Unit 5**

Text Books:
2. P.S.R. Murty, "Operation and Control in Power Systems" B.S. publications

Reference Books

Outcome of the Course:

- To make students understand Economic operation of power system and importance of LFC control.
- To allow students discuss about thermal and hydro power plants operation in meeting the load demand optimally.
- To improve student’s ability in solving problems (numerical problems at present)
- Ability to discuss single area load frequency control and two area load frequency control.
- Ability to model and design turbine and Automatic controller.

Approved by the Academic Council at its 6th Meeting held on 13.05.2017

Objectives of the Course

- To give the exposure to types of power supplies
- To give the exposure to types of resonant converter used in real world applications
- To analyze and gain knowledge about practical exposure and applications of different power electronic controllers.

**Unit 1**

**Power Supplies:** Introduction, ac power supplies: power quality, power supply protection, power conditioners, uninterruptible power supplies; dc power supplies: comparison of linear and switched-mode power supplies, dc to dc converters with electrical isolation: forward, push-pull and bridge converter, SMPS.

**Resonant Converters:** Switched-mode inductive current switching, significance of ZVS and ZCS, classification of resonant converters, series and parallel load resonant converters, class-E converters, ZCS/ZVS resonant switch converters and their switch configurations, resonant dc link converters and their circuit configurations.

**Analysis and simulation of Power Electronic Circuits:** Analysis of simple power electronic circuits with RL, RC and RLC type loads and dc / sinusoidal sources; performance of transformers for high frequency applications, computer simulation of power electronic devices and systems.

**Unit 2**

**Recent Power Semiconductor Devices:** Recent advances in power devices and their relative merits, power modules, protection of devices and converters, heat management.

**Applications of Different Controllers:** Three-phase ac regulators, multiple converters, application of different converters in solar and wind energy systems as well as in dispersed generation, current trends in power electronics.

**Text Books:**

Outcome of the Course:

- Develop their own program to solve their own problem and use this program to solve similar problems later on.
- Develop simulink model of the given system.

**List of Experiments**

1. To simulate and analyze push-pull converters
2. To simulate and analyze bridge converter
3. To simulate and analyze series load resonant converter
4. To simulate and analyze parallel load resonant converter
5. To analyze and simulate RL type load electronic circuit
6. To analyze and simulate RLC type load electronic circuit
7. To simulate three phase ac regulator
8. To design and simulate converter for solar plant connected to grid
9. To design and simulate converter for wind plant connected to grid

Approved by the Academic Council at its 6th Meeting held on 13.05.2017

<th>Semester</th>
<th>VIII</th>
</tr>
</thead>
</table>

### Objectives of the Course
- Understand the need of EHV AC transmission and various issues related with it
- Reactive power management, Stability of AC and DC systems
- In depth converter analysis, faults, protections, harmonic considerations, grounding system

### Unit 1
**Introduction:** Need of EHV transmission, standard transmission voltage, comparison of EHV AC & DC transmission systems and their applications & limitations, surface voltage gradients in conductor, distribution of voltage gradients on sub-conductors, mechanical considerations of transmission lines, modern trends in EHV AC & DC transmission, Types of tower

### Unit 2
**EHV AC Transmission:** Corona loss formulas, corona current, audible noise- generation and characteristics corona pulses their generation and properties, radio interference (RI) effects, over voltage due to switching, ferroresonance, reduction of switching surges on EHV system.

### Unit 3
**Extra High Voltage Testing:** Characteristics and generation of impulse voltage, generation of high AC and DC voltages, measurement of high voltage by sphere gaps and potential dividers.

### Unit 4
**EHV DC Transmission-I:** Types of dc links, converter station, choice of converter configuration and pulse number, effect of source inductance on operation of converters, principle of dc link control, converter controls characteristics, firing angle control, current and excitation angle control, power control, starting and stopping of dc link.

### Unit 5
**EHV DC Transmission-II:** Converter faults, protection against over currents and over voltage, HVDC Circuit breakers, Smoothing reactors, generation of harmonics, ac and dc filters, multi – terminal dc systems (MTDC): Types, control, protection and application.

### Text Books:

### Reference Books

### Outcome of the Course:
- Student will be able to demonstrate the knowledge of Power handling capacity of different Transmission systems
- Effect of Electrostatic and electromagnetic fields and corona due to EHVAC lines.
- Voltage control and current control systems for power flow controls in HVDC system.
- The knowledge of AC filters as well as DC filters and Reactive power compensation
- Overall knowledge about the HVDC system such as MTDC, protection and substation layout of HVDC power plant

Objectives of the Course

- Diode rectifiers with passive filtering. Half-wave diode rectifier with RL and RC loads; 1-phase full-wave diode rectifier with L, C and LC filter; 3-phase diode rectifier with L, C and LC filter; continuous and discontinuous conduction, input current waveshape, effect of source inductance; commutation overlap.

Unit 1

- Diode rectifiers with passive filtering Half-wave diode rectifier with RL and RC loads; 1-phase full-wave diode rectifier with L, C and LC filter; 3-phase diode rectifier with L, C and LC filter; continuous and discontinuous conduction, input current waveshape, effect of source inductance; commutation overlap.

Unit 2

- Multi-Pulse converter: Review of transformer phase shifting, generation of 6-phase ac voltage from 3-phase ac, 6-pulse converter and 12-pulse converters with inductive loads, steady state analysis, commutation overlap, notches during commutation.

Unit 3

Unit 4

- Ac-dc bidirectional boost converter Review of 1-phase inverter and 3-phase inverter, power circuits of 1-phase and 3-phase ac-dc boost converter, steady state analysis, operation at leading, lagging and unity power factors. Rectification and regenerating modes. Phasor diagrams, closed-loop control structure.

Unit 5

- Isolated single-phase ac-dc flyback converter Dc-dc flyback converter, output voltage as a function of duty ratio and transformer turns ratio. Power circuit of ac-dc flyback converter, steady state analysis, unity power factor operation, closed loop control structure.

Text Books:

Reference Books

Outcome of the Course:

- Analyse controlled rectifier circuits.
- Understand the operation of line-commutated rectifiers – 6 pulse and multi-pulse configurations.
- Understand the operation of PWM rectifiers – operation in rectification and regeneration modes and lagging, leading and unity power factor mode.
Objectives of the Course
- Understand the fundamentals of energy management functions
- Understand the economic analysis and system energy management for electrical system and equipment.
- Enhance the knowledge in SCADA.

Unit 1: SCADA
- Purpose and necessity, general structure, data acquisition, transmission & monitoring.
- General power system hierarchical Structure. Overview of the methods of data acquisition systems, commonly acquired data, transducers, RTUs, data concentrators, various communication channels- cables, telephone lines, power line carrier, microwaves, fiber optical channels and satellites.

Unit 2: Supervisory and Control Functions
- Data acquisitions, status indications, major values, energy values, monitoring alarm and event application processing.
- Control Function: ON/OFF control of lines, transformers, capacitors and applications in process in industry - valve, opening, closing etc.
- Regulatory functions: Set points and feedback loops, time tagged data, disturbance data collection and analysis. Calculation and report preparation.

Unit 3: MAN-Machine Communication
- Operator consoles and VDUs, displays, operator dialogues, alarm and event loggers, mimic diagrams, report and printing facilities.
- Data basis- SCADA, EMS and network data basis. SCADA system structure - local system, communication system and central system. Configuration- NON-redundant- single processor, redundant dual processor. Multicontrol centers, system configuration.

Unit 4: Energy Management Center
- Functions performed at a centralized management center, production control and load management economic dispatch, distributed centers and power pool management.

Text Books:
2. George L Kusic "Computer Aided Power System Analysis", Prentice Hall of India,

Reference Books

Outcome of the Course:
- Understand the fundamentals of energy management functions
- Understand the economic analysis and system energy management for electrical system and equipment.
- Expose to the concept of supervisory control and data acquisition.
- Familiarize the application of SCADA in power systems
**Course Structure & Syllabus of B.Tech – Electrical Engineering**

**Objectives of the Course**

**Unit 1**

Energy Scenario: Commercial and Non-commercial energy, primary energy resources, commercial energy production, final energy consumption, energy needs of growing economy, long term energy scenario, energy pricing, energy sector reforms, energy and environment, energy security, energy conservation and its importance, restructuring of the energy supply sector, energy strategy for the future, air pollution, climate change. Energy Conservation Act-2001 and its features.

Basics of Energy and its various forms: Electricity tariff, load management and maximum demand control, power factor improvement, selection & location of capacitors, Thermal Basics-fuels, thermal energy contents of fuel, temperature & pressure, heat capacity, sensible and latent heat, evaporation, condensation, steam, moist air and humidity & heat transfer, units and conversion.

**Unit 2**

Energy Management & Audit: Definition, energy audit, need, types of energy audit. Energy management (audit) approach-understanding energy costs, bench marking, energy performance, matching energy use to requirement, maximizing system efficiencies, optimizing the input energy requirements, fuel & energy substitution, energy audit instruments. Material and Energy balance: Facility as an energy system, methods for preparing process flow, material and energy balance diagrams.

**Unit 3**

**Unit 4**

Energy Efficient Technologies in Electrical Systems: Maximum demand controllers, automatic power factor controllers, energy efficient motors, soft starters with energy saver, variable speed drives, energy efficient transformers, electronic ballast, occupancy sensors, energy efficient lighting controls, energy saving potential of each technology.

**Text Books:**

**Reference Books**

2. Guide books for National Certification Examination for Energy Manager / Energy Auditors Book-3, Electrical Utilities (available online)

**Outcome of the Course:**

- Understand the current energy scenario and importance of energy conservation.
- Understand the concepts of energy management.
- Understand the methods of improving energy efficiency in different electrical systems.

**OBJECTIVES:**
The objective of this course is to provide the necessary knowledge and understanding the concepts of Oracle architecture components along with the overview of Storage Structure and Relationships.

**UNIT I** Introduction

Oracle Architectural Components, Getting Started With Oracle Server , Managing an Oracle Instance, Creating a Database, Data Dictionary Contents and Usage, Maintaining the Control File, Redo Log Files, Managing Tablespaces and Data Files, Storage Structures and Relationships, Managing Undo Data, Tables, Indexes, Maintaining Data Integrity, Managing Password, Managing Security, Resources, users, Privileges & Roles, Loading Data Into a Database & Globalization Support

**UNIT II** DBA Fundamentals

**UNIT III** Managing Oracle

Oracle10i: Overview, Preparing the Operating System & Install Oracle9i Software, Create a Custom Oracle Database, Install and Configure Enterprise Manager, Customize the Oracle Database Linux Measurement Tools, Oracle Measurement Tools, Tuning Oracle

Database Troubleshooting
One Time Troubleshooting, Adhoc Troubleshooting, Escalations, Connectivity, Business Continuity, High Availability and Scalability, Data Sharing and Information Integration

**LEARNING OUTCOMES**
After the completion of course, students will have skill to

1. CO1. Explain the concepts of Oracle architecture components.
2. CO2. Explain the overview of Storage Structure and Relationships
3. CO3. Illustration of the concepts of Managing Process in Databases

**Text Book:**

**Reference Book:**

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
OBJECTIVES:
This course aims to give the students about the knowledge & various applications of information security in the area of computer science.

UNIT I
Introduction: Security problem in computing, Secure system characteristics, what to secure – How to secure - at what cost?
Elementary Cryptography – DES – AES – Public Key Encryption – Uses of Encryption

UNIT II

UNIT III

LEARNING OUTCOMES
At the end of the students shall able to learn about:
CO1. Identify and explain symmetric algorithms for encryption-based security of information.
CO2. Identify and explain public-key based asymmetric algorithms for encryption-based security of information.
CO3. Examine the issues related to administration security, physical security, and program security.

Text Book:

Reference Book:
Unit 1
Introduction: Importance of user Interface—definition, importance of good design. Benefits of good design. A brief history of Screen design. The graphical user interface—popularity of graphics, the concept of direct manipulation, graphical system, Characteristics, Web user—Interface popularity, characteristics- Principles of user interface.

Unit 2
Design process—Human interaction with computers, importance of human characteristics human consideration, Human interaction speeds, understanding business junctions.

Unit 3
Screen Designing: Design goals—Screen planning and purpose, organizing screen elements, ordering of screen data and content—screen navigation and flow, Visually pleasing composition -amount of information -focus and emphasis, presentation of information simply and meaningfully information retrieval on web - statistical graphics—Technological consideration in interface design.

Unit 4
Windows—New and Navigation schemes selection of window, selection of devices based and screen based controls.
Components—text and messages, Icons and increases—Multimedia, colors, uses problems, choosing colors.

Unit 5
Interaction Devices—Keyboard and function keys—pointing devices—speech recognition digitization and generation—image and video displays—drivers.

**Course Outline:** To provide a detailed idea how the internet is connecting the entire world and helps to live a smart life with its technology.

**Course Objective:**

1. Vision and Introduction to IoT.
2. Understand IoT Market perspective.
5. Real World Design Constraints, Industrial Automation and Commercial Building Automation in IoT.

**Course Pre/Co-requisite (if any):** Wireless Sensor Networks

**Detailed Syllabus**

**UNIT 1: M2M to IoT (05 Lectures)**

The Vision-Introduction, From M2M to IoT, M2M towards IoT-the global context, use case example, Differing Characteristics.

**UNIT 2: M2M to IoT (A Market Perspective)(10 Lectures)**

Introduction, Some Definitions, M2M Value Chains, IoT Value Chains, An emerging industrial structure for IoT, The international driven global value chain and global information monopolies. M2M to IoT-An Architectural Overview– Building an architecture, Main design principles and needed capabilities, An IoT architecture outline, standards considerations. IOT related open source software tools introduction; tools like IoTivity, IBM Blue Mix. Introduction to Contiki, Cooja, Raspberry Pi etc.

**UNIT 3:M2M and IoT Technology Fundamentals(05 Lectures)**

Devices and gateways, Local and wide area networking, Data management, Business processes in IoT, Everything as a Service (XaaS), M2M and IoT Analytics, Knowledge Management.

**UNIT 4: IoT Architecture-State of the Art(12 Lectures)**

**UNIT 5:Industrial Automation(08 Lectures)**

Service-oriented architecture-based device integration, SOCRADES: realizing the enterprise integrated Web of Things, IMC-AESOP: from the Web of Things to the Cloud of Things

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Course Structure & Syllabus of B.Tech – Electrical Engineering
Applicable for Batch: 2017-2021

Commercial Building Automation: Introduction, Case study: phase one-commercial building automation today, Case study: phase two- commercial building automation in the future.

Learning Outcome
- Explain the definition and usage of the term 'The Internet of Things' in different contexts
- Understand where the IoT concept fits within the broader ICT industry and possible future trends
- Able to build and test a complete working IoT system
- Pursue lifelong learning for professional advancement.

Course Objective:
1. Understand the fundamentals of wireless networks.
2. Understand and evaluate emerging wireless technologies and standards.
3. To explore mobile security issues.
4. To explore the mobility concept.

Detailed Syllabus

UNIT 1

Introduction: Mobile computing with functions & devices, Networks, Middleware & gateways, Application & services, Developing mobile computing applications, Security & standards why it necessary, Architecture for mobile computing. (3 L)

UNIT 2

Emerging Technologies: Bluetooth, Rfid, WiMAX, Mobile IP, IPv6, GSM architecture, Call routing in GSM, Mobile computing over SMS, Value added service through SMS, GPRS architecture & operations, 3G & applications (10 L)

UNIT 3

Wireless Transmission:
Signal propagation- path loss of radio signals, additional signal propagation effects, Multipath propagation, Multiplexing- Space division, frequency division, time division, code division, Modulation- ASK, FSK, PSK, AFSK, APSK, Multi-carrier modulation Spread spectrum- Direct sequence & frequency hopping Mac- Hidden & exposed terminals, near- far terminal, SDMA, TDMA, FDMA, Fixed TDM, CSMA, PRMA, Multiple access with collision avoidance (12 L)

UNIT 4

Wireless LAN: IEEE 802.11 in details, HIPERLAN, Link manager protocol, L2CAP, security, SDP. (5 L)

UNIT 5

Mobility & Security in mobile computing: HTTP, Wireless application protocol- architecture, wireless datagram protocol, wireless transport layer security, wireless transaction & session protocol, WML, Push architecture, push/ pull services, i-mode & SyncML Information security, Security techniques & algorithms, public key infrastructure, (10 L)

Learning Outcome

At the end of the course, Learning Outcomes Having successfully completed this course, the student will demonstrate:
1. Apply the fundamental design paradigms and technologies to mobile computing applications.
Course Structure & Syllabus of B.Tech – Electrical Engineering

Applicable for Batch: 2017-2021

2: Develop consumer and enterprise mobile applications using representative mobile devices and platforms using modern development methodologies.
3: Appraise the quality and performance of mobile applications.
4: Assess and implement security principles in mobile applications.
5: Evaluate wireless network topologies, wireless connectivity and characteristics, and the impact of wireless networks on security and Internet communications.
6: Select appropriate wireless technologies in commercial and enterprise applications.

Objectives of the Course:
- To understand the concept of Computer Communication.
- To learn the basics of Data communication and Networks
- To develop and design the protocol systems for advance computer communication.

UNIT I: Introduction to Communication:
Communication system, Analog and Digital Communication, channel bandwidth, Ideal and Practical Filters, Concept of Signal Distortion over a Communication Channel, Energy Signal and Power Signal, Introduction to noise in Communication systems. 6L

UNIT II: Introduction to Modulation techniques:
Concept of Amplitude Modulation, Concept of Frequency & Phase Modulation, Concept of ASK, FSK & PSK, Concepts of PCM. 8L

UNIT III: Introduction to Data Communication Network & OSI Model:
Switching systems, network hardware and software, Layering, design issues for layering, reference models and their comparison, example of networks. Concepts of OSI model. 6L

UNIT IV: Introduction to Data Communication Protocols and transmission media
MAC protocols- Aloha, CSMA, collision free protocols, Ethernet, IEEE 802.3 standard, IP protocols, IP addressing, OSPF, IPv4, IPv6. Transmission media and channel impairments, multiplexing, digital channels, switching. Repeaters, bridges, routers and gateways. 8L

Text Books:

Reference Books:

List of Experiments:
1. To generate amplitude modulated wave and determine the percentage modulation and Demodulate the modulated wave using envelope detector.
2. To generate AM-Double Side Band Suppressed Carrier (DSB-SC) signal.
3. To generate the SSB modulated and Demodulated wave.
4. To generate frequency modulated signal and determine the modulation index and bandwidth for various values of amplitude and frequency of modulating signal and to demodulate a FM signal.
5. To study ASK modulation and Demodulation.
6. To study FSK modulation and Demodulation.
7. To study PSK modulation and Demodulation.
8. To Study TDM/PCM Transmitter /Receiver.
OUTCOMES OF THE COURSE:
The course provides an understanding of:

- Computer Communication and networks.
- Protocol design and their design issues.
Objectives of the Course: The students will learn
- Requirement of bio-medical and its application
- Concept of bio-potential electrodes and measurements related to them.
- Concepts of bio-transducers and measurements related to them.
- Concept of bio-medical instruments and their uses experimentally.

UNIT I: ANATOMY AND PHYSIOLOGY:
Basic Cell Functions, Origin of Bio-potentials, Electrical Activity of Cells, components of man Instrument system, types of bio-medical stems, design factors and limitations of biomedical instruments, terms and transducers to various physiological events. 8L

UNIT II: BIO-POTENTIAL ELECTRODE:
Types of bio-potential electrodes., Electrode-Electrolyte interface, half cell potential, Polarization- polarisable and non-polarisable electrodes, Ag/AgCl electrodes, Electrode circuit model; Electrode and Skin interface and motion artifact. Body surface recording electrodes for ECG. Electrodes standards. 8L

UNIT III: BIO-TRANSDUCER:
Transduction Principles: Resistive Transducers Strain Gauge- types, construction, selection materials, Gauge factor, Bridge circuit, Temperature compensation. Strain Gauge type Blood pressure transducers. Inductive Transducers, Capacitive Transducer, Piezoelectric Transducer. 8

UNIT IV: BIOTELEMETRY AND ELECTRICAL SAFETY:
Bio-telemetry design, single channel bio telemetry transmitter and receiver system based on AM, FM and, pulse modulation. Significance of Electrical Danger, physiological effect of current, ground shock Hazards. 8L

Text Books:

Reference Books:
1. J.G. Webster, ‘Medical instrumentation application and design’, Houghton Mifflin Co., Boston USA.

OUTCOMES OF THE COURSE:
The course provides an understanding of:
- Bio-medical instruments and measurements.
- Principle of working of bio-medical transducers.
- Skills to use modern bio-medical tools and equipment for measurements related to human body.

LIST OF EXPERIMENTS
2. Pulse measurement
3. Heartbeat measurement
4. Automatic BP measurement
5. Heart sound study using electronics stethoscope
6. ECG measurement

Following experiments to be done on the breadboard
7. Design of low noise and low frequency amplifier for biomedical application
8. Design of Instrumentation amplifier
9. Construction of chopper amplifier

Two Value Added Experiments to be added by Instructor.

**Course Objective:** This course provides an overview on principles of ergonomics and human factors, their applications to the design and management of industrial systems, Engineering anthropometry, Human performance, human-technology interaction, work place and work station design and concept of value engineering. To address the underlying concepts, methods and application of Value Engineering

**Course Pre/Co-requisite (if any):**

**Detailed Syllabus**

**UNIT 1: Introduction of Ergonomics**

Background of ergonomics, historical evolution of ergonomics, definition of ergonomics, aspect of ergonomics, man machine interaction, and man machine closed loop system, man machine system (MMS)

**Work physiology**

Muscle structure, metabolisms, circulatory and respiratory systems, energy expenditure and workload

**UNIT 2: work related MSDs risk and work postures assessment**

Introduction, assessment of work postures using RULA Methods, work posture assessment using rapid entire body assessment tool (REBA)

**Office Ergonomics-**

Introductions, Issues in workstation design, seat design, engineering anthropometry and work design, A case study: an investigation on passenger seat design in sleeper class coaches in Indian trains.

**UNIT 3: Physical stress- Introduction, vibration, occupational noise exposure, sound, source of noise and vibration, basic theory of noise measurement, Noise measuring meters, basic sound level meters, noise control, permissible limits of exposure with respect to occupational noise.**

**UNIT 4: Value Engineering Introduction: Definition, value engineering recommendations, programs, advantages, Evaluation of function, determining function, classifying function, evaluation of costs, evaluation of worth, determining worth, and evaluation of value.**

Value Engineering Job Plan: Introduction, orientation, information phase, Function phase, creation phase, evaluation phase, Investigation phase, implementation phase, speculation phase, analysis phase.

**UNIT 5: Selection of Evaluation of Value Engineering Projects: Project selection, Methods selection, value standards, application of Value Engineering methodology.**

Initiating Value Engineering Program: Introduction, training plan, career development for Value Engineering specialties.

Fast Diagramming: Cost models, life cycle costs.

Value Engineering level of Effort: Value Engineering team, Co-ordinator, designer, different services, definitions, construction management contracts, value engineering case studies

**Learning Outcome**

At the end of the course the student can:

CO1: Specify and design ergonomically appropriate industrial workstations for the industrial and office work environment.

CO2: Identify information-centered human factors relating to visual, illumination, controls, displays and symbols.

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Course Structure & Syllabus of B.Tech – Electrical Engineering
Applicable for Batch: 2017-2021

CO3: Compare, contrast and assess human body-centered ergonomic designs for posture, material handling, repetitive motion factors, heat stress, noise and vibration.
CO4: Define the ergonomic factors intrinsic in evaluating accidents, human errors and safety related incidents.
CO5: Student will understand the concepts, methods and application of Value Engineering

Text book [TB]:

Reference books [RB]:

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
**Course Objective:** This course aims at introducing the students to the basic concepts of engineering design and product development with focus on the front end processes. At the end of this course the student is expected to demonstrate an understanding of the overview of all the product development processes and knowledge of concept generation and selection tools.

**Course Pre/Co-requisite (if any):** Manufacturing Process, Industrial Engineering and Management

**Detailed Syllabus**

**UNIT 1:**
Significance of product design, Need for developing products, product design and development process, the importance of engineering design, sequential engineering design method, relevance of product lifecycle issues in design, the challenges of product development.

Product Planning and Project Selection: generic product development process, Identifying opportunities, evaluate and prioritize projects, allocation of resources, various phases of product development-planning for products.

**UNIT 2:**
Identifying Customer Needs voice of customer, customer populations, Interpret raw data in terms of customers need, hierarchy of human needs, need gathering methods, establish the relative importance of needs.

Product Specifications: Establish target specifications, setting final specifications

Concept Generation: Activities of concept generation, clarifying problem, search both internally and externally, explore the output

**UNIT 3:**
Industrial Design: Assessing need for industrial design, industrial design process, management, assessing quality of industrial design, human factors design, user friendly design

Concept Selection: Overview, concept screening and concept scoring, methods of selection, case studies.

**UNIT 4:**
Theory of inventive problem solving (TRIZ): Fundamentals, methods and techniques, General Theory of Innovation and TRIZ, Value engineering Applications in Product development and design, Model based technology for generating innovative ideas measurement of customers response.

Concept Testing: Elements of testing: qualitative and quantitative methods including survey.

**UNIT 5:**
Intellectual Property: Elements and outline, patenting procedures, claim procedure.

Design for Environment: Impact, regulations from government, ISO system, case studies.

**Learning Outcome**

At the end of the course the student can:

CO1: Product Design and Innovation course is intended to introduce overall awareness of the product design process.

CO2: This course will give an understanding of methods, tools and techniques applied in product design.

CO3: This course includes overview of innovation, product design process, user study, need/problem identification, development of design brief, understanding competitive benchmarking, aspects of human factors in product design, tools for creative concept generation, and prototyping/model making and evaluation techniques for user-product interaction.

CO4: This course will be explained with lectures including case studies and hands-on exercises. This will help students to generate creative ideas in to product design, considering human factors aspects.

**Text book [TB]:**
Course Structure & Syllabus of B.Tech – Electrical Engineering

Applicable for Batch: 2017-2021

REFERENCES [RB]:

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Course Objective: To provide students an overview of global energy resources with focus on renewable energy sources and their importance in the context of limited supply of conventional energy resources & global warming.

Course Pre/Co-requisite (if any): Basic Thermodynamics, Heat Transfer

Detailed Syllabus

UNIT 1: ENERGY RESOURCES
Introduction: Energy & its importance in social & economic development; energy demand & supply, world energy status, energy scenario in India; energy & environment, greenhouse effect & global warming; role of renewable energy sources; a brief introduction to various renewable energy sources – hydro, solar, biomass, wind, geothermal & ocean energy – their availability & present status.

UNIT 2: SOLAR ENERGY
The sun as a source of energy, extraterrestrial & terrestrial solar radiation; solar radiation data & geometry, solar radiation on horizontal & inclined surfaces; solar thermal systems – various types of solar collectors & their applications in cooking, drying, water heating, distillation, space heating & cooling, refrigeration and power generation. Solar photovoltaic systems, solar cell fundamentals, performance & characteristics, types of solar cells; solar cell, module, and array construction; solar PV applications.

UNIT 3: BIOMASS ENERGY
Origin of biomass, photosynthesis & generation of biomass, availability of biomass, usable forms of biomass – fuel wood, charcoal, fuel pellets, biodiesel, bioethanol, biogas and producer gas; biomass conversion technologies, thermochemical & biochemical methods, biomass gasification, classification & operational parameters of biogas plants, energy recovery from urban waste, sewage to energy conversion.

UNIT 4: WIND ENERGY
Origin & nature of winds; history of power from winds; global & local winds; estimation of wind energy at a site; maximum power extraction from wind – Betz criterion; capacity factor of wind power plants; types of wind turbines – horizontal and vertical axis wind turbines; wind energy storage; environmental & economic aspects; present status of wind energy systems.

UNIT 5: GEOTHERMAL & OCEAN ENERGY
Structure of earth’s interior; origin & distribution of geothermal energy, types of geothermal resources – exploration & development of hydrothermal, geo-pressured & hot dry rock resources; electrical power generation from geothermal energy; environmental & economic considerations. Ocean energy; tidal, wave & ocean thermal energy, energy from tidal streams (marine currents); technology for harnessing tidal & wave energy; ocean thermal energy conversion technology.

Learning Outcome
At the end of the course the student will:
CO1: Understand about the interaction between energy, economy, environment, and social development.
CO2: Appreciate the importance of renewable energy sources & future energy systems based on them.
CO3: Possess the basic technical knowledge to develop energy systems based on solar, biomass, wind, geothermal & ocean energy.
Course Structure & Syllabus of B.Tech – Electrical Engineering
Applicable for Batch: 2017-2021

Approved by the Academic Council at its 6th Meeting held on 13.05.2017
Course Objective: The course provides wide knowledge about basics of GIS and its applications in various fields.

Unit-1: Introduction

Definition of GIS, Cartography and GIS, GIS database: spatial and attribute date; Spatial models: Semantics, spatial information, temporal information, conceptual models of spatial information, representation of geographic information: point, line and area futures, topology,

Unit-2: Components

Raster and vector data, raster to vector data conversion, map projection, analytical transformation, rubber sheet transformation, manual digitizing and semi-automatic line following digitizer; Remote sensing data as an input to GIS data;

Unit-3: Classifications and Functions

Attribute database: scale and source of inaccuracy; GIS functionality; data storage and data retrieval through query, generalization, classification, containment search within a spatial region;

Unit-4: Analysis

Overlay: arithmetical, logical and conditional overlay, buffers, inter visibility, aggregation; Network analysis;

Unit-5: Applications

Applications of GIS in planning and management of utility lines and in the filed of environmental engineering, geotechnical engineering, transportation engineering and water resources engineering.

Course Outcome: The students will learn from this course:

- Basic understanding of GIS concepts, components.
- Analyzing geo-spatial data with various techniques and GIS tools
- Apply the concepts in solving environmental and engineering problems
- Create new information and theoretical knowledge after applying GIS tools

Books Recommended:
1. Course Summary
The course provides information about the students to learn the basic concept and Applications of Carbon capture and storage process. In this course, students will learn about carbon capture techniques and the concept of the contribution of fossil fuel to climate change. During this course students will examine the Co2 emission and Carbon dioxide recycling.

2. Course Objectives
The students should be able to:
   1. The objective of this course is make students familiar with the principles and applications of carbon capture and storage capture techniques and role of CCS.

3. Course Outcomes
   1. To acquaint the students substantially to the objectives and necessity of Carbon Sequestration and capture.
   2. To introduce the contribution of fossil fuel to climate change.
   3. To understand the concept of emission and recycling of CO2.
   4. To introduce the candidates to the concept of underground storage and other Carbon Capture and sequestration concepts.
   5. To understand the implementation of CCS technology and IPCC.

4. Curriculum Content

UNIT 1
Introduction: Scope, Objectives and Necessity of CCS.

UNIT 2
The contribution of fossil fuels emission to Climate change and global warming. Concept of Carbon Credit and carbon footprint.

UNIT 3
Carbon capture techniques: Carbon-di-oxide emission, Scrubbing of CO2, Carbon dioxide recycling.

UNIT 4
Carbon dioxide sequestration: Underground storage, Potential for Geologic Storage, Application in Oil and gas industry, Carbon di oxide flooding projects, Methane recovery projects.

UNIT 5
Strategy for implementing CCS technology: Modelling of Cost and Performance of CCS Plants. Role and function of IPCC.

Textbook [TB]:
1. Carbon Capture; Jennifer Wilcox; Springer
2. Capturing Carbon – The new weapon in the War Against Climate Change; Mills, Robin M.; Columbia University Press

Unit 3: Introduction to Transportation problems, various methods of Transportation problem, Variations in Transportation problem, introduction to Assignment problems, variations in Assignment problems. Sequential optimization, Representation of multistage decision process; Types of multi stage decision problems; Concept of sub optimization and the principle of optimality.

Unit 4: Optimization techniques, Memetic algorithm, Differential evolution, Evolutionary algorithms, Dynamic relaxation, Genetic algorithms, Hill climbing with random restart, Genetic Algorithm (GA), Artificial Bee Colony (ABC), Particle Swarm Optimization (PSO), Firefly algorithm, Fish School Search, Fly algorithm, Ant colony optimization algorithms

Course Objective:
To create an overview and understanding of various art forms that exists from ancient to modern times.

Unit 1: INTRODUCTION
Understanding various art forms in society and in different cultures.

Unit 2: Sociological Perspective
Relationship between art, culture and society. Influence of art forms on people.

Unit 3: Appreciation-I: Painting/ Sculptures
Understanding and appreciating films/ documentaries from past to present times and between east and west.

Unit 4: Appreciation-II: Films/ Documentries
Understanding and appreciating painting and sculptures from past to present times and between east and west.

Unit 5: Appreciation-III: Indigenous/ Folk Art
Understanding and appreciating Indigenous/ Folk art from past to present times and between east and west.

LEARNING OUTCOME:
4. The student will be able to understand the various art forms.
5. The students will be able to understand and establish a relationship between art, culture and society.
6. The students will be able to appreciate the various art.

**Unit 1** (10L)
Introduction to nanotechnology, definition, history of nanotechnology, nanotechnology in relation to other branches of engineering, characteristic length scale of materials and their properties, classification of nanomaterials, dimensionality and size dependent phenomena, confinement in 0-D, 1-D, 2-D and 3-D, surface to volume ratio, fraction of surface atoms, surface energy.

**Unit 2** (7L)
Nanomaterials synthesis techniques; top-down and bottom-up techniques, ball milling, PVD, CVD, self-assembly.

**Unit 3** (8L)
Nanomaterials characterization; XRD, SEM, TEM, AFM, UV-VIS.

**Unit 4** (8L)
Nanomaterials and their properties: carbon based nano materials, metal based nano materials, quantum dots, biological nano materials.

**Unit 5** (7L)
Applications of nanotechnology in engineering, solar energy conversion, nanomedicine.
