“All about our achievers and their saga
of achievement”

**THEY SAID SKY IS THE LIMIT, OUR NAINA ADHIKARI
SURPASSED THE WATER TOO!**

WHAT COULD LIMIT A DITIAN, AFTER-ALL ?

MADE IN DIT

Made for the World

MADE IN DIT, inspired by MAKE IN INDIA, is DIT University's effort designed to foster innovation and enhance skill development in its students and give best-in-class graduates to the World. Recent policy changes and reforms have underpinned foreign investments and job creation, making India the world's most attractive investment destination. Focusing on these very landmark developments, MADE IN DIT, with its world-ready globally accepted programs, is shaping the destiny of its students, right here in India - enabling them take the center-stage on the global arena.

The stage has been set. The world is watching.

WHAT'S THERE FOR YOU?

L e a v e r s '

Hear it from the Achievers 3-4

Gateway to our Saga 5-6

Directly from our top achievers' pen!

"I was 13 when I took up kayaking and since then there is no turning back. From being hydrophobic to becoming a kayaker, I stayed committed and faced all my fears. I participated in my first international event, The Ganga Kayak Festival in 2014 when I became the Youngest Indian female paddler and in 2019 won its overall female Champion title. I feel a sense of pride sometimes when I realize that I am the only girl kayaker in the entire nation to have done

pressured into the academic mold. I found myself being able to compete in most of the tournaments on yearly basis while being supported by the college and it's staff. The vast network of support I continue receiving from DIT allows me to excel in both the sports I engage in and my studies. The immense academic support, inspiration and appreciation I receive here will indeed help me soar high..."

- Naina Adhikari

some of the major and historic epic white water rapids but at the same time feel the need to promote this daring game. Hence, I am on a mission to inspire more girls to take up this extreme sport. Kayaking is not just a mere game for me but a lifestyle and DIT gave me the opportunity to live by it. Being an athlete it was important for me to find a university that would support me in my pursuits. I could have not found a better institution than DIT University to realize my dream. Studying in this college allowed me to pursue my passion without being

Directly from our top achievers' pen!

a completely different path from my course, through which I even became the Design Head for our several college magazines. Placements played a crucial role in harnessing my leadership skills, being a student placement representative

helped me grow professionally for taking challenges of corporate world. I got recently placed with LIDO Learning for the role of Business Development Executive at an annual package of 10LPA. Amidst this I even planned to study abroad for which I cleared IELTS with 7.5 bands and got an offer for MS in Data Science from Macquarie University. In my entire college journey with DITU, I was provided with every resource I ever required which truly made me stand with the university's ideology of IMAGINE, ASPIRE AND ACHIEVE."

- Sanat Srivastava

"It was not easy for me to come out of my comfort zone, I was always an active student who used to take part in all the activities and I thought I'll be leaving that behind with my secondary school. But as I joined DIT, I was surprised to see the vast opportunities they have been providing to the students to showcase their skill set and the platform to harness it. I decided to make the most out of it which led me towards forming of a new technical club along with my friends. Alongside, I also developed a new skill of graphic designing which was

Companies which chose DITians as their asset

BUT HOW DID THIS SAGA BEGIN?

DIT utterly believes in its students and when these students make a choice of being called a proud DITian, we feel delighted to shoulder the responsibility of framing their career towards the correct path. Our holistic approach is to help the students achieve their goals, for which our team ensures giving them the right career advice.

We utterly believe that learning is not attained by chance, it must be sought for with ardor and attended to with diligence and a vision of nourishing young adults for life through a cognitive approach.

However, the ambitions of our DITians play an equal part in shaping their learning direction.

Realising what our students want and what suits best for their career, DIT focusses towards developing knowledgeable and skilled global citizens. We value their hard work and thus their

success remains our top priority, for which our in-house placements and career development teams become the single point of contact and source of guidance. To ensure that each DITian is corporate ready and gets proper training to gain cognitive skill sets, we develop students in each year of their undergraduate and post graduate program. But they aren't just trained to become industry experts or excel in MNCs, but also in the government sector. Therefore, the students aspiring for CAT/GATE/UPSC/ IES/DEFENCE/BANKING & other government jobs are provided apt coaching and guidance by our teams.

At DIT, a career is not just an output of an academic intervention for us. It is moreover a unique methodology that combines a deeper understanding of one's self, an appreciation and study of the environment and a deeper look at the purpose of making a career. And that's how the saga begins, continues and prospers.

Another feather to her cap was winning the Overall Female Championship and Best Indian Female Paddler Award at Ganga Kayak Festival 2019. She recently made her place at the second and third position in Boater Cross at Ganga Kayak Festival, 2020.

Acing rapids and getting through raging rivers with NAINA ADHIKARI

At the age of 13, when the only fun that every kid craves for is returning back from school and grabbing the TV remote, Naina Adhikari, our English Hons. student took up Kayaking as her passion and made a leap to mark her name everywhere possible. She won her first Best Debut Award at Ganga Kayak Festival in 2014, which pumped her to get into the sport seriously. Since then, there's been no looking back. In 2018 she was the gold medalist at Delhi Olympic Games, further to which she won 2 bronze medals in 2019 National Canoe Slalom Championship and then a silver medal in Ladakh River Festival 2019.

Haasshh! Isn't this super adventurous? But did Naina stop here? No she didn't actually. Her craze for kayaking is thrilling her even more as she has been sponsored GoPro India athlete and brand sponsored athlete for NRS which is the biggest kayaking gear company in the world. Becoming its India Ambassador at such a young age is certainly a great accomplishment for our super amazing girl and we certainly have our eyes set on what all Naina is about to explore in future.

And its not just classrooms that we focus on, but theatre, playground and kitchens too have our DITians.

You tell us what would limit an individual and we'll tell how our DITians surpass every limit. They are scoring marvelous in CAT, GATE, CMAT, XAT, getting admission calls from not just the top institutions of India but also from foreign universities, excelling in sports, representing DIT and the nation at world forums, working day in and out on their start-ups, refining their writing skills or maybe singing passion, and what not.

With our holistic approach of encouraging the students to follow their passion and build a career that drives them crazy working towards it, our DITians are perfectly exploring every field. With an

impressive array of facilities ranging from theatre style lecture halls, smart classrooms, modern labs, conference and seminar halls, a gym, an amphitheater, a high-tech Learning Resource Center, state-of-the-art IT Center and indoor and outdoor sport facilities, this is how we are becoming a part of our students' success saga.

Being Assertive In The Workplace

Being Assertive- what are some benefits that a worker will acquire if they make their desires and wants to be recognised to employers/supervisors vs people who never voice their concerns?

Being assertive in a place of business interprets into being assured and not being afraid to share what you need or accept as true with in. This displays a person who's in charge in their own moves and picks and is aware of when to talk up. Assertiveness translates into high-quality, respectful and assured behaviour, and at the same time being able to be aware of the desires and feelings of others.

Being assertive has tremendous advantages at the workplace:

- Renders you capable of promoting/pitching in your ideas to others
- Enhances visibility of what you are able to do and the way you perceive

matters

The future of work today is characterized with the aid of:

- Jobs are changing and are being displaced. Jobs that in no way existed before are being created.
- Technology and automation is changing the manner in which we work
- Global multi-national virtual teams have become the norm
- Flexi instances and working domestically might be the order of the day

According to modern research, the 5 must-have characteristics of the modern-day employee may be synthesised as:

- Embracing change
- Giving a voice to your agency
- Being independent and self-directed
- Sharing and supporting others to construct high-cost networks and groups
- Being able to distil down to what is crucial, filter out and cognizance

KARTIK knows well how to combine humanity and engineering into a huge jar!

Being a humanitarian by birth and an engineer by choice, our student Kartik Tyagi is perfectly attaining the expertise of combining management and technical skills.

His accomplishment of having been selected as one of the delegates in Harvard US-India Initiative Conference, 2020, has given him a platform to interact with world's top business leaders, entertainment professionals, government officials and philanthropists.

As DIT is a land of experimenting and transformations, Kartik has successfully designed a project on an automated wheelchair (Neuro Technology with Artificial Intelligence) which could help the mentally and physically disabled.

It was incredibly an honor for us to have come across his selection amongst the 20 delegates to attend the 5th International Youth Summit 2020, as an add-on to which his fellowship has also been

confirmed in 39th Prague International Youth Leadership Conference 2020. And who really said that its just the elders who can teach? Our kid is excelling with his objective of contributing in creating a learning conducive environment, for which he has also been honored with the REX Karmaveer Global Young Leaders Fellowship (#GYLF), Karmaveer Chakra Awards 2019 instituted by #iCONGO in partnership with the #UnitedNations. But nonetheless, as we are a humanity-rich university, we are proud to see the way Kartik volunteers with NGOs for animals and senior citizens, also acting as a proud Robin at RHA and Feeding India too.

Mohd Dilnawaz is implementing his learnings from National Institute of Solar Energy

Mohammad Dilnawaz Azmi details his internships while pursuing Mechanical Engineering with us. He took up his first internship with the National Institute of Solar Energy (NISE) where he worked on two major projects of Solar Air Drier and Solar Thermal. Based on his learnings at NISE, he has drafted a research paper on his work on integration of PV and SWHS technology, which is currently under review for publication.

It's a delight to watch our students grill their skills towards their passion. And just not to stop here, Dilnawaz also worked with Scania India in the area of parts process, where he's now working on being part of the company's R&D Team. His focus is towards utilizing his learnings and knowledge of solar energy to develop sustainable transport with minimal carbon emissions

Hey Akshay! How's South Africa Going?

We were just discussing about our engineering students, and here's another gem we are proud of. Akshay Kumar, our B.Tech Electrical student from the batch of 2013-2017 received a huge success soon after completing his graduation with us. His research proposal 'Performance Analysis of Double-Gate MOSFET based ICs for RF Wireless Communications' got selected at the University of KwaZulu-Natal, South Africa, for the master's

programme.

But not alone the books, his cocurriculums are exceptional too! Akshay is the founding member and Director of GISR Foundation, a not-for-profit organization engaged in providing education for the girl child. With more than 3,000 active members, the foundation gives free education to over 20 girls and also conducts research conferences, global summits, FDPs and award summits.

Which Is More Important? IQ or EQ? Or both?

At one point of time, IQ changed the view as being the primary determinant of success. People with excessive IQs were assumed to be destined for a life of achievement and researchers debated whether or not intelligence became fabricated from genes or the surroundings.

However, some critics began to recognise that excessive intelligence does not assure a fulfilment in lifestyles, it became additionally too slim of an idea to fully embody the huge variety of human competencies and expertise.

IQ is still identified as a vital detail of achievement, specifically in relation to academic achievement. People with high IQs usually do well in life, frequently earn more money, and tend to be more healthy in standard. But nowadays professionals understand it isn't always the best determinate of lifestyle achievement. Instead, it is part of a complex array of effects that consist of emotional intelligence among different matters. The concept of emotional intelligence has had a strong impact in a number of regions, including the enterprise global. Many businesses now mandate emotional intelligence training and utilize EQ tests as a part of the hiring procedure.

And then how could we not be proud of our exceptional designers!

We had a list of our students' achievements, we had an idea to be implemented, we knew what we were willing to showcase to our readers, but when it came to putting everything together and producing a perfect insight, our designing team had our back!

Kudos to our students who have on their tips all the UI and UX expertise.

COVID near me

Everyday India is experiencing a surge in active Covid19 cases. In order to make people aware about their surroundings, two of our students, Aayush Saini and Sanat Srivastava took an initiative of covidnearme.in to educate the crowd about the current situation of this country. People are still unaware about their city and are showing carelessness. covidnearme.in is user centric, it provides stats which are necessary for an individual to understand, uses your location service to locate and provide information about the covid19 cases.

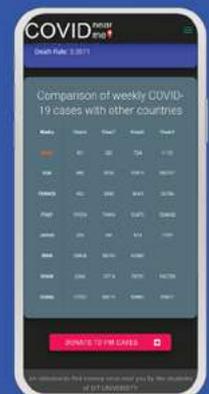

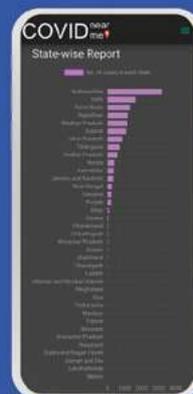

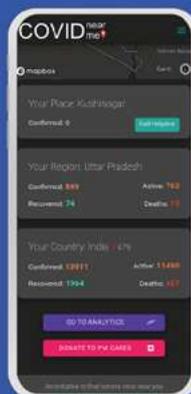

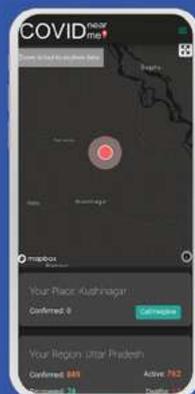

The website posses a very simlpe and easy to use UI. The dark theme of the website helps user navigate through the website very easily without any strain. The website displays the number of reported and recovered cases along with the deaths by COVID from all around the nation. Also, the website provides a user to directly donate to the PM care fund.

The Concept of CUT COPY PASTE

Transition from campus to corporate can be valued. No matter how the graduation days were, who doesn't want to be successful in the blink of an eye? Talking about success who wouldn't be interested in achieving the same; but are we really sure about how to aim towards it? One thing we are pretty sure about are the shortcuts. The world today is actually running on a CUT-COPY-PASTE module, which is just to act without observing the outcomes. Now is your turn to stand out of the crowd.

Presented below is a fairly new version of the CPC module, so pull up your socks for some quick bits which can help you in the long run in the corporate:

- » **Consistency-** Be it professional or the personal life, vicissitudes are everywhere, but do not let them act as barriers. The approach towards any new project, problem or life is just a reflection of your mind-set at that particular point of time. The first and the foremost step is to be positive with the attitude. Next, never consider the work as a burden, this decreases your efficiency and turns your attitude to be bitter. Rather consider it as an opportunity to learn and give it your best shot.
- » **Precision-** What if the calculator that you just bought makes an error? Would you trust it again that easily. Since we are all humans, every task can be metered out by either precise or erroneous results. The key ingredient here is the effort that we make for the task to complete. Start learning from your mistakes and that of others too. At the same time remember that when it comes to learning, no one is junior or senior, friend or a foe.
- » **Concision-** 'In short words', which is also the meaning of the word concision, refers to be simple, short and crisp in the professional life. In today's era no one has ample time to listen to stories, so learn to put your best foot forward, that too in time. Not only writing, but this is applicable to speaking too. Keep your thought process disciplined and the world would listen to you.

Leave no opportunity to grow and prosper, and let your learning curve grow exponentially. Embark today on your journey to be successful and maintain a balance in your life. And always remember- WORK SMARTER AND NOT HARDER.
